The Truth About Us Sanjoy Chakravorty, 2019-05-07 India has an information space packed with numerous sources and agents from politicians and activists to profiteers and extortionists all competing for attention and legitimacy in a growing information market Whom does one believe The political manipulation and simplification of information about a dizzyingly

complex society have fashioned certain truths about India. These truths have resulted in the creation of major religious and caste identities which have been the defining features of the country's politics and history for over 200 years. An unsparing study of how this situation has come about. *The Truth about Us* explores answers to crucial questions: Is India a homogenous Hindu nation sprinkled with minorities or a pluralistic heterogeneous one? Is our knowledge of the inequalities in our society founded on facts or perceptions? What are the real origin stories of India's social categories and how are they being constructed and challenged today? At a time when India is in the throes of an existential debate convulsed by contesting claims over identity and history, Hindutva and Dalit consciousness, nationalism and freedom of speech and the rights and realities of minorities, this deeply provocative book is urgent reading for every thinking Indian. **The Handbook of the**

Friendship, Robots, and Social Media Alexis M. Elder, 2017-12-15 Various emerging technologies from social robotics to social media appeal to our desire for social interactions while avoiding some of the risks and costs of face to face human interaction. But can they offer us real friendship? In this book Alexis Elder outlines a theory of friendship drawing on Aristotle and contemporary work on social ontology and then uses it to evaluate the real value of social robotics and emerging social technologies. In the first part of the book Elder develops a robust and rigorous ontology of friendship: what it is, how it functions, what harms it and how it relates to familiar ethical and philosophical questions about character, value and well being. In Part II she applies this ontology to emerging trends in social robotics and human robot interaction including robotic companions for lonely seniors, therapeutic robots used to teach social skills to children on the autism spectrum and companionate robots currently being developed for consumer markets. Elder articulates the moral hazards presented by these robots while at the same time acknowledging their real and measurable benefits. In the final section she shifts her focus to connections between real people, especially those enabled by social media. Arguing against critics who have charged that these new communication technologies are weakening our social connections, Elder explores ways in which text messaging, video chats, Facebook and Snapchat are enabling us to develop, sustain and enrich our friendship in new and meaningful ways.
