Liu,2012-12-06 The first edition of *Oncogenes* 1989 focused on several of the better known transforming mechanisms and surveyed a spectrum of solid tumors and hematologic malignancies Several of the nearly 50 known oncogenes most relevant to human disease were examined In contrast this volume presents a very different profile and balance of subject material that reflects the rapidly changing field of molecular oncology and its newly emerging concepts Among the most important discoveries of the past 4 years are the identification of nearly a dozen different tumor suppressor genes and the finding of an entirely new class of cancer causing gene bcl 2 that acts by inhibiting cell death rather than stimulating cell proliferation This edition begins by reviewing selected malignancies in which our earlier search for clinically relevant oncogenes has led to more focused studies on gain of function and loss of function genetic abnormalities as well as autocrine and paracrine growth factor loops known to regulate tumor physiology and malignant cell behavior Curiously many of these genetic and functional abnormalities are shared by several different tumor types and are not uniformly present in all tumors of the same type This observation brings up molecular questions about the tissue specific determinants that underlie individual cancers and also gives added impetus to the suggestion that molecular abnormalities referred to as tumor markers be included among the histopathologic features used for clinical diagnosis and management **Genetic Basis for Carcinogenesis** Takamatsu no Miya Hi Gan Kenkyū Kikin. International Symposium,1990 This volume brings together the latest studies on various aspects of molecular oncology It emphasizes the current view that oncogenes and suppressor genes need to be discussed in the same context *Oncogenes* Kathy B. Burck,Edison T. Liu,James W. Larrick,2012-12-06 Cancer viruses have played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelism Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his plat form having been the chemical characterization of the tobacco mosaic virus as a pure protein correction ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S

National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses It was problematic whether viruses played an etiological role in more than a handful of human cancers Origins of Human Cancer Joan Brugge,1991 Molecular Genetics of Cancer John K. Cowell,2001 Since the first volume was published there has been significant success in isolating genes responsible for particular cancers as well as a major improvement in our understanding of the molecular events leading to tumors This book explores possible genetic treatments that can suppress cancer cells that have formed tumors and it presents the details of the isolation and characterization of new human cancer genes that have recently been identified Molecular Genetics of Cancer 2E is an essential book for anyone involved in cancer research and the search for a cure Molecular Genetics of Cancer John Cowell,2003-12-16 Molecular Genetics of Cancer Second Edition provides an authoritative and up to date review of the key genes known to be critical in the development or progression of cancer Throughout the book scientific advances and their clinical relevance are covered in detail particularly in the light of findings concerning the inheritance of genes predisposing to tumorigenesis The book is therefore a valuable source of reference for clinicians and genetic counsellors as well as researchers Molecular Biology of Cancer Genes Mels Sluyser,1990
