

Sufficiency's integration into climate and energy strategies

Briefing note

October 2022

Energy and climate transition scenarios are crucial tools to anticipate and plan the necessary transition towards climate neutral, environmentally compatible, and resilient economies.

However, most scenarios published to date have sought to achieve the transition through ambitious technological changes, despite the potentially related investments and environmental risks. **Sufficiency, which is about redesigning our societies and needs to rely less on resource intensive services (energy, material, land) to achieve well-being, has been underrepresented in that regard.** It has recently gained prominence in Europe in the context of the energy crisis, calling for rapid energy saving measures, but is still a taboo word in most public policies and political discourse.

This briefing note aims to demonstrate the **potential of sufficiency as a key lever for making economies climate neutral and resilient**, as illustrated by the CLEVER scenario, a collaborative Low Energy Vision for Europe towards net zero emissions by 2050 at the latest.

Pathway To Energy Sufficiency The 2050 Study
