Frederik Nijhout, 1991-08-17 Integrating the results of comparative morphology experiments on pattern development the genetics of color patterns and theoretical modeling of pattern formation Nijhout shows that the enormous diversity of natural patterns arises largely from quantitative variations in a small set of readily understandable generating rules **Diversity and Evolution of Butterfly Wing Patterns** Toshio Sekimura, H. Frederik

Nijhout, 2017-08-29 This book facilitates an integrative understanding of the development genetics and evolution of butterfly wing patterns To develop a deep and realistic understanding of the diversity and evolution of butterfly wing patterns it is essential and necessary to approach the problem from various kinds of key research fields such as evo devo eco devo developmental genetics ecology and adaptation food plants and theoretical modeling The past decade and a half has seen a veritable revolution in our understanding of the development genetics and evolution of butterfly wing patterns In addition studies of how environmental and climatic factors affect the expression of color patterns has led to increasingly deeper understanding of the pervasiveness and underlying mechanisms of phenotypic plasticity In recognition of the great progress in research on the biology an international meeting titled Integrative Approach to Understanding the Diversity of Butterfly

Wing Patterns IABP 2016 was held at Chubu University Japan in August 2016 This book consists of selected contributions from the meeting Authors include main active researchers of new findings of corresponding genes as well as world leaders in both experimental and theoretical approaches to wing color patterns The book provides excellent case studies for graduate and undergraduate classes in evolution genetics genomics developmental biology ecology biochemistry and also theoretical biology opening the door to a new era in the integrative approach to the analysis of biological problems This book is open access under a CC BY 4 0 license *Evolution and Transitions in Complexity* Gerard A.J.M Jagers op Akkerhuis,2016-10-18 This book discusses several recent theoretic advancements in interdisciplinary and transdisciplinary integration in the field of evolution While exploring novel views the text maintains a close link with one of the most broadly held views on evolution namely that of Darwinian evolution This work puts forth a new point of view which allows researchers to define in detail the concept of evolution To create this conceptual definition the text applies a stringent object based focus With this focus the editor has been able to develop an object based pattern of evolution at the smallest scale Subsequently this smallest scale pattern is used as an innovative basis for generalizations These generalizations create links between biological Darwinism and generalized Darwinism The object based approach that was used to suggest innovations in the field of Darwinian evolution also allowed for contributions to other topics such as major evolutionary transitions theory the definition of life and the relationships between evolution self organization and thermodynamics Together the chapters of this book and the multidisciplinary reflections and comments of various specialists on these chapters offer an exciting palette of innovative ideas Evo-Devo of Color Pattern Formation Ricardo Mallarino,Marcus Kronforst,Marie Manceau,2021-11-01 **An Investigation of Evolution in Chrysomelid Beetles of the Genus Leptinotarsa** William Lawrence Tower,1906
