

The background of the entire image is a traditional marbled paper pattern. It features a complex, organic design with swirling, cell-like shapes in various shades of brown, tan, and beige. Interspersed within these larger shapes are smaller, more vibrant patches of blue and grey, creating a rich, textured appearance. The overall effect is reminiscent of natural stone or biological cells.

Fuzzy-Neuro Systems '98 Wilfried Brauer,1998

Probabilistic Models of the Brain Rajesh P.N. Rao,Bruno A. Olshausen,Michael S. Lewicki,2002-03-29 A survey of probabilistic approaches to modeling and understanding brain function Neurophysiological neuroanatomical and brain imaging studies have helped to shed light on how the brain transforms raw sensory information into a form that is useful for goal directed behavior A fundamental question that is seldom addressed by these studies however is why the brain uses the types of representations it does and what evolutionary advantage if any these representations confer It is difficult to address such questions directly via animal experiments A promising alternative is to use probabilistic principles such as maximum likelihood and Bayesian inference to derive models of brain function This book surveys some of the current probabilistic approaches to modeling and understanding brain function Although most of the examples focus on vision many of the models and techniques are applicable to other modalities as well The book presents top down computational models as well as bottom up neurally motivated models of brain function The topics covered include Bayesian and information theoretic models of perception probabilistic theories of neural coding and spike timing computational models of lateral and cortico cortical feedback connections and the development of receptive field properties from natural signals
