Michalski, J.G. Carbonell, T.M. Mitchell, 2013-04-17 The ability to learn is one of the most fundamental attributes of intelligent behavior Consequently progress in the theory and computer modeling of learning processes is of great significance to fields concerned with understanding intelligence Such fields include cognitive science artificial intelligence information science pattern recognition psychology education epistemology philosophy and related disciplines The recent observance of the silver anniversary of artificial intelligence has been heralded by a surge of interest in machine learning both in building models of human learning and in understanding how machines might be endowed with the ability to learn This renewed interest has spawned many new research projects and resulted in an increase in related scientific activities In the summer of 1980 the First Machine Learning Workshop was held at Carnegie Mellon University in Pittsburgh In the same year three consecutive issues of the International Journal of Policy Analysis and Information Systems were specially devoted to machine learning No 2 3 and 4 1980 In the spring of 1981 a special issue of the SIGART Newsletter No 76 reviewed current research projects in the field This book contains tutorial overviews and research papers representative of contemporary trends in the area of machine learning as viewed from an artificial intelligence perspective

As the first available text on this subject it is intended to fulfill several needs **Metacognition, Metahumanities, and Medical Education** Alan Bleakley, Quentin Eichbaum, Rachel Ellaway, 2024-09-30 This persuasive volume develops a novel approach to medical education and the medical humanities making a case for the integration of the two to explore the ways in which warm humanism and cold technologies can come together to design humane posthumanist futures in medicine There are many problems with conventional medical education It can be overly technocratic dehumanizing and empathy eroding introducing artefacts that lead to harm and reproduce inequality and injustice Use of the arts humanities and qualitative social sciences have been pursued as an antidote or balance to these problems Arguing against the purely instrumentalist use of medical humanities in this way this book addresses the importance of a genuine and open ended engagement with humanities approaches in medicine It discusses the impact of artificial intelligence and emerging theoretical frameworks and posthumanist perspectives such as object oriented ontology on meaning making in medicine It

demonstrates how the key to such a transition is the recovery of the intrinsic art and humanity of metaphor heavy biomedical science in turn framed by models of dynamic complexity rather than static linearity This book is an important contribution to debates around the medical humanities and its role in medical education It is an essential read for scholars with an interest in these areas as well as those working in science and technology studies and the sociology of health and illness *Machine Learning* Ryszard S. Michalski, Jaime G. Carbonell, Tom M. Mitchell, 2014-06-28 *Machine Learning An Artificial Intelligence Approach* contains tutorial overviews and research papers representative of trends in the area of machine learning as viewed from an artificial intelligence perspective The book is organized into six parts Part I provides an overview of machine learning and explains why machines should learn Part II covers important issues affecting the design of learning programs particularly programs that learn from examples It also describes inductive learning systems Part III deals with learning by analogy by experimentation and from experience Parts IV and V discuss learning from observation and discovery and learning from instruction respectively Part VI presents two studies on applied learning systems one on the recovery of valuable information via inductive inference the other on inducing models of simple algebraic skills from observed student performance in the context of the Leeds Modeling System LMS This book is intended for researchers in artificial intelligence computer science and cognitive psychology students in artificial intelligence and related disciplines and a diverse range of readers including computer scientists robotics experts knowledge engineers educators philosophers data analysts psychologists and electronic engineers **Machine Learning of Natural Language** David M.W. Powers, Christopher C.R. Turk, 2012-12-06 We met because we both share the same views of language Language is a living organism produced by neural mechanisms relating in large numbers as a society Language exists between minds as a way of communicating between them not as an autonomous process The logical rules seem to us an epiphenomena of the neural mechanism rather than an essential component in language This view of language has been advocated by an increasing number of workers as the view that language is simply a collection of logical rules has had less and less success People like Yorick Wilks have been able to show in paper after paper that almost any rule which can be devised can be shown to have exceptions The meaning does not lie in the rules David Powers is a teacher of computer science Christopher Turk like many workers who have come into the field of AI Artificial Intelligence was originally trained in literature He moved into linguistics and then into computational linguistics In 1983 he took a sabbatical in Roger Shank's AI project in the Computer Science Department at Yale University Like an earlier visitor to the project John Searle from California Christopher Turk was increasingly uneasy at the view of language which was used at Yale **Encyclopedia of Computer Science and Technology** Jack Belzer, Albert G. Holzman, Allen Kent, 1979-01-01 This comprehensive reference work provides immediate fingertip access to state of the art technology in nearly 700 self contained articles written by over 900 international authorities Each article in the Encyclopedia features current developments and trends in computers software vendors and applications extensive bibliographies of

leading figures in the field such as Samuel Alexander John von Neumann and Norbert Wiener and in depth analysis of future directions How to Create a Mind Ray Kurzweil, 2013-08-27 NEW YORK TIMES BESTSELLER The bold futurist and renowned author of *The Singularity Is Near* explores the limitless potential of reverse engineering the human brain This book is a Rosetta Stone for the mystery of human thought Martine Rothblatt chairman and CEO United Therapeutics and creator of Sirius XM Satellite Radio Kurzweil's vision of our super enhanced future is completely sane and calmly reasoned and his book should nicely smooth the path for the earth's robot overlords who it turns out will be us The New York Times In *How to Create a Mind* Ray Kurzweil presents a provocative exploration of the most important project in human machine civilization reverse engineering the brain to understand precisely how it works and using that knowledge to create even more intelligent machines Kurzweil discusses how the brain functions how the mind emerges brain computer interfaces and the implications of vastly increasing the powers of our intelligence to address the world's problems He also thoughtfully examines emotional and moral intelligence and the origins of consciousness and envisions the radical possibilities of our merging with the intelligent technology we are creating Drawing on years of advanced research and cutting edge inventions in artificial intelligence *How to Create a Mind* is an incredible synthesis of neuroscience and technology and provides a road map for the future of human progress
