Griffiths, C.J. Martin, 2017-10-18 The Engineering Group of the Geological Society Working Party brought together experts in glacial and periglacial geomorphology Quaternary history engineering geology and geotechnical engineering to establish best practice when working in former glaciated and periglaciated environments The Working Party addressed outdated terminology and reviewed the latest academic research to provide an up to date understanding of glaciated and periglaciated terrains This transformative state of the art volume is the outcome of five years of deliberation and synthesis by the Working Party This is an essential reference text for practitioners students and academics working in these challenging ground conditions The narrative style and a comprehensive glossary and photo catalogue of active and relict sediments structures and landforms make this material relevant and accessible to a wide readership Practical Handbook of Soil, Vadose Zone, and Ground-Water Contamination J. Marinos, 2001 This fourth volume of five from the June 1997 conference was much delayed the first four volumes were published in 1997 It comprises 23 special lectures solicited for the conference on various aspects of problematic soils natural and man made hazards urban and regional planning waste disposal mines and quarries large engineering works and protection of geological geographical historical and architectural heritage There is no subject index Annotation copyrighted by Book News Inc Portland OR *Engineering of Glacial Deposits* Barry G. Clarke, 2017-07-14 At some time 30% of the world's land mass was covered by glaciers leaving substantial deposits of glacial soils under major conurbations in Europe North and South America New Zealand Europe and Russia For instance 60% of the UK has been affected leaving significant glacial deposits under major conurbations where two thirds of the population live Glacial soils are composite soils with significant variations in composition and properties and are recognised as challenging soils to deal with Understanding the environment in which they were formed and how this affects their behaviour are critical because they do not always conform to classic theories of soil mechanics This book is aimed at designers and contractors working in the construction and extractive industries to help them mitigate construction hazards on with or in glacial deposits These soils increase risks to critical infrastructure which in the UK includes the majority of the road and rail network coastal defences

such as the fastest eroding coastline in Europe and most of the water supply reservoirs It brings together many years of experience of research into the behaviour of glacial deposits drawing upon published and unpublished case studies from industry It draws on recent developments in understanding of the geological processes and the impact they have upon the engineering properties construction processes and performance of geotechnical structures Unlike other books on glaciation it brings together all the relevant disciplines in earth sciences and engineering to make it directly relevant to the construction industry *Science of Ecosystem-based Management* Alan Desbonnet, Barry A Costa-Pierce, 2008-01-12

Science for Ecosystem based Management Narragansett Bay in the 21st Century addresses the broad problem of coastal nutrient pollution In the U S approximately two thirds of the coastal rivers and bays are moderately to severely degraded from nutrient pollution However debates continue about how large a problem nutrient pollution is and what actions to take and since effective management requires decisions at a local scale an in depth case study can provide valuable guidance Narragansett Bay is one of the best studied estuaries in the world Rhode Island has been developing regulatory and management actions to reduce nutrient inputs particularly those of nitrogen to the waters of Narragansett Bay This book was developed in response to a symposium addressing this mandate with coastal estuarine scientists and environmental management agency personnel The contributors use long term data sets to discuss the interactions among biological ecological chemical and physical processes and discuss what is known about nutrient inputs to the bay ecosystem the impacts related to nutrient inputs and how the ecosystem might respond to a sudden reduction in these inputs **Marine**
