## Introduction

It is important to note that Jo Boaler is a writer and educator who has received many prizes and awards. At the same time, the woman leads a movement that aims to change the way teachers and students think about mathematics and perceive it. Thus, during her speech at TEDx, she talked about the experiment she conducted at Stanford. Moreover, the speaker immediately announced that her students cried in order to interest people to listen and capture their attention. Hence, the experiment was performed with students who spent a lot of time studying algebra and really tried to improve their knowledge. However, the innovation was that Jo Boaler did not use standard tests to check their knowledge, but showed them a virtual picture with squares and assigned tasks.

## Discussion

Interestingly, the students' opinions were different, they believed that the squares grow horizontally, vertically, or proportionally. However, the speaker notes that two people in the group cried because they realized that the simple principle that explains the algebraic progression. Moreover, the tears were caused by the fact that these people spent many hours studying higher mathematics using standard methods, but most of them could not explain the arrangement of squares in the picture.

Then, the woman began to share her experience of studying at school, where children constantly learn new symbols and formulas, which makes them tired and afraid. Therefore, most of the students do not have enough knowledge of mathematics, because they consider this subject extremely difficult and boring. Instead, as a solution to this problem, Jo Boaler proposes to apply knowledge about the brain to make it easier to learn mathematics. Therefore, the speaker demonstrates a picture of the human brain and shows that two of the five brain pathways are visual. Thus, she showed that the brain can more easily perceive information that is difficult for it, which is

Ramsay, 1997-10-28 Widely praised Greenwood's *Biographical Dictionary of American Educators* Greenwood 1978 quickly became a standard reference work for students and scholars of American education. This new volume includes biographical sketches of more than 400 notable researchers, leaders, reformers, critics, and practitioners from all major fields of education and extends the coverage of its predecessor to the mid 20th century. Its topical range encompasses such diverse areas as psychology, music, health, measurement and evaluation, science, special education, history, and administration. It treats education at all levels including early childhood, elementary and secondary, higher and adult. Most of the educators profiled were active in the 20th century but several dozen have been included from the 19th century. A special effort has been made to include women and educators of color whose contributions have often been overlooked in the past. Each biographical sketch includes information on family background, a description of the educator's accomplishments, and a digest of the person's education and career, professional and civic service, major publications, and principal honors. Each profile ends with a list of references, and the volume closes with appendices listing birth places, states of major service, fields of work, a chronological listing of educators, and a list of important dates in American education. A comprehensive index concludes the volume. Educators are included from all fifty states and were selected from numerous suggested candidates for inclusion. Most of the educators profiled were active in the 20th century but several dozen have been included from the 19th century. A special effort has been made to include women and educators of color whose contributions have often been overlooked in the past.

enough or are they too way out to be acceptable In some fields perhaps these criteria are less important than in others In education I sense that novelty is a tricky criterion varying in value from society to society In some societies the new ideas have to justify their adoption in the face of the old tried and tested ideas Better the devil you know than the devil you don't In other societies the old ways have to justify their continuation in the face of the new promising and exciting ideas I can't find a good proverb for this Perhaps proverbs are all about preserving the past In any case some people will argue there is nothing new to be said about education anyway the problems are the same and it is only the context which changes Mellin Olsen develops the reader's knowledge through this book in ways that are both novel and challenging Their novelty is not in question judging by reactions to them which vary from they have nothing to do with mathematics education to they concern everything that is done in mathematics education *John G. Kemeny and Dartmouth College* Stephen J. Nelson, 2019-09-05 Featuring never before published excerpts from his unfinished autobiography this book explores the career of John G. **Rediscovering the Spirit of Education After Scientific Management** Jim Neyland, 2010-01-01 Education is being eroded Otherwise put education is more and more being brought under the yoke of a mode of thought that reduces it to something mechanical narrowly characterized by codes predefined outcomes protocols and rules The cause it is argued is the growing dominance of a new fashion in education called scientific management Scientific management has become the new and unquestionable orthodoxy in education As a consequence it has become increasingly difficult to imagine let alone articulate an alternative This book explores the origins and fundamental assumptions of scientific management and suggests how the spirit of education might be rediscovered by turning instead to a more ethical socially interpersonal and full bodied orientation The approach taken avoids the difficulties usually associated with such ethically oriented treatments of education by drawing on recent findings in neurophysiology psychology primate and language studies The book is a Reader and is designed to both supplement and invigorate undergraduate and postgraduate courses in education and to appeal to general readers who have an interest in education
