The Adman's Dilemma Paul Rutherford, 2018-10-11 The Adman s Dilemma is a cultural biography that explores the rise and fall of the advertising man as a figure who became effectively a licensed deceiver in the process of governing the lives of American consumers Apparently this personage was caught up in a contradiction both compelled to deceive yet supposed to tell the truth It was this moral condition and its consequences that made the adman so interesting to critics novelists and eventually filmmakers The biography tracks his saga from its origins in the exaggerated doings of P T Barnum the emergence of a new profession in the 1920s the heyday of the adman s influence during the post WW2 era the later rebranding of the adman as artist until the apparent demise of the figure symbolized by the triumph of that consummate huckster Donald Trump In The Adman s Dilemma author Paul Rutherford explores how people inside and outside the advertising industry have understood the conflict between artifice and authenticity The book employs a range of fictional and nonfictional sources including memoirs novels movies TV shows websites and museum exhibits to suggest how the adman embodied some of the strange realities of modernity

Neural and Metabolic Control of Macronutrient Intake Hans-Rudolf Berthoud, Randy J. Seeley, 1999-10-25 When an excessive proportion of the human energy requirement is derived from fat the likelihood of obesity increases Any such individual is at risk for diabetes and cardiovascular disease grave and costly health hazards The selective control of fat ingestion is a promising solution to these concerns Existing data suggests that macronutrient intake can be manipulated Further research is working to create pharmacological tools that will suppress fat consumption It will also be possible to fight obesity heart disease and diabetes Neural and Metabolic Control of Macronutrient Intake systematically discusses the known physiological mechanisms involved in macronutrient selection including their molecular genetic and neurochemical aspects The book is also a critical review of the hypothesis that ingestion of the three nutrients is regulated by separate neural control mechanisms leaving open the possibility that strategies could be devised to intervene in bodily control systems and alter the proportion of fat in the diet This reference provides three types of information First the basic background of the biochemical and physiological systems as they relate to macronutrient selection Second opinions and data concerning to what degree animals and humans show evidence of macronutrient selection And third evidence about how the central

nervous system might be involved in the choices animals make among macronutrients **Register of the Commissioned and Warrant Officers of the United States Navy and Marine Corps and Reserve Officers on Active Duty** ,1984
