Rangeland Ecology And Management:

Rangeland Ecology And Management Harold Heady, R. Dennis Child, 1999-11-11 Over the last two decades the science of range management like many other resource disciplines has embraced and integrated environmental concerns in the field the laboratory and policy Rangeland **Rangeland Ecology, Management and Conservation Benefits** Victor R. Squires, 2015 Rangelands are a type of land that include vast grasslands shrublands woodland wetlands and deserts grazed by domestic livestock or wild animals They comprise almost one half of all the lands in the world This book analyzes the sustainability of beef cattle systems of the Spanish Rangelands known as Dehesas These systems are considered as outstanding High Nature Value HNV farming systems and the most agroforestry systems in Europe Additionally on a global scale China has around one eighth of the rangelands the second largest area of land in any country other than Australia These rangelands are mostly inhabited by peoples of various ethnic minorities This book provides an overview of the environment and current development trends in the pastoral regions including a glimpse of the people affected most by any conservation or development effort and provide a framework for future integrated conservation and development work in the pastoral regions of north and north west China Furthermore land degradation and biodiversity loss are the most critical issues of ecological environment in the West of China and they are the main causes for poverty and constraints for economic development This book examines rangeland degradation in China as well as rangeland management and livestock production in an effort to arrest and reverse rangeland degradation In other chapters changes in vegetation related with grazing are reviewed the benefits of reintegrating burrowing bettongs as a part of rangeland restoration programs and integrating national feral camel management plans that are being implemented across the camel range in Australia aiming to control the damage caused by camels there are around 750 000 feral camels in arid and semi arid rangelands in Australia Rangeland Ecology & Management, 2005 Rangeland Systems David D. Briske, 2017-04-12 This book is open access under a CC BY NC 2.5 license This book provides an unprecedented synthesis of the current status of scientific and management knowledge regarding global rangelands and the major challenges that confront them It has been organized around three major themes The first summarizes the conceptual advances that have occurred in the rangeland profession The second addresses the implications of these conceptual advances to management and policy The third assesses several major challenges confronting global rangelands in the 21st century This book will compliment applied range management textbooks by describing the conceptual foundation on which the rangeland profession is based It has been written to be accessible to a broad audience including ecosystem managers educators students and policy makers The content is founded on the collective experience knowledge and commitment of 80 authors who have worked in rangelands throughout the world Their collective contributions indicate that a more comprehensive framework is necessary to address the complex challenges confronting global rangelands Rangelands represent adaptive social ecological systems in which societal values organizations and

capacities are of equal importance to and interact with those of ecological processes A more comprehensive framework for rangeland systems may enable management agencies and educational research and policy making organizations to more effectively assess complex problems and develop appropriate solutions

Rangeland Ecology And Management Harold Heady, 2019-05-20 The science of range management like many other resource disciplines has embraced and integrated environmental concerns in the field the laboratory and policy Rangeland Ecology and Management now brings this integrated approach to the classroom in a thoroughly researched comprehensive and readable text The authors discuss the basics of ran

Rangeland Ecology & Management, 2005 Rangeland Ecology & Management, 2005 *Rangeland Wildlife Ecology and Conservation* Lance B. McNew, David K. Dahlgren, Jeffrey L. Beck, 2023-09-01 This open access book reviews the importance of ecological functioning within rangelands considering the complex inter relationships of production agriculture ecosystem services biodiversity and wildlife habitat More than half of all lands worldwide and up to 70% of the western USA are classified as rangelands uncultivated lands that often support grazing by domestic livestock The rangelands of North America provide a vast array of goods and services including significant economic benefit to local communities while providing critical habitat for hundreds of species of fish and wildlife This book provides compendium of recent data and synthesis from more than 100 experts in wildlife and rangeland ecology in Western North America It provides a current and in depth synthesis of knowledge related to wildlife ecology in rangeland ecosystems and the tools used to manage them to serve current and future wildlife biologists and rangeland managers in the working landscapes of the West The book also identifies information gaps and serves as a jumping off point for future research of wildlife in rangeland ecosystems While the content focuses on wildlife ecology and management in rangelands of Western North America the material has important implications for rangeland ecosystems worldwide

Landscape Ecology, Function and Management J Ludwig, D Tongway, K Hodgkinson, D Freudenberger, J Noble, 1996-11-01 This book encapsulates the extensive knowledge developed by CSIRO's National Rangelands Program on how rangeland landscapes function and the implications for management It looks at the ecology of rangeland landscape processes and deals with what happens when things go wrong when a landscape loses its ability to efficiently capture and store water and nutrients a state the authors call dysfunctional Ways of managing rangelands in response to understanding landscape function are also considered The concluding Section looks to the future providing some scenarios for the way rangeland landscapes may be used in 2020

New Models for Ecosystem Dynamics and Restoration Richard J. Hobbs, Katharine N. Suding, Peter Society for Ecological Restoration International, 2013-03-19 As scientific understanding about ecological processes has grown the idea that ecosystem dynamics are complex nonlinear and often unpredictable has gained prominence Of particular importance is the idea that rather than following an inevitable progression toward an ultimate endpoint some ecosystems may occur in a number of states depending on past and present ecological conditions The emerging idea of restoration thresholds also enables scientists to recognize

when ecological systems are likely to recover on their own and when active restoration efforts are needed Conceptual models based on alternative stable states and restoration thresholds can help inform restoration efforts New Models for Ecosystem Dynamics and Restoration brings together leading experts from around the world to explore how conceptual models of ecosystem dynamics can be applied to the recovery of degraded systems and how recent advances in our understanding of ecosystem and landscape dynamics can be translated into conceptual and practical frameworks for restoration In the first part of the book background chapters present and discuss the basic concepts and models and explore the implications of new scientific research on restoration practice The second part considers the dynamics and restoration of different ecosystems ranging from arid lands to grasslands woodlands and savannahs to forests and wetlands to production landscapes A summary chapter by the editors discusses the implications of theory and practice of the ideas described in preceding chapters New Models for Ecosystem Dynamics and Restoration aims to widen the scope and increase the application of threshold models by critiquing their application in a wide range of ecosystem types It will also help scientists and restorationists correctly diagnose ecosystem damage identify restoration thresholds and develop corrective methodologies that can overcome such thresholds

Grassland Productivity and Ecosystem Services Gilles Lemaire, John Hodgson, Abad Chabbi, 2011 This book contains 28 chapters with emphasis on the interactive nature of the relationships between the soil plant animal and environmental components of grassland systems both natural and managed It analyses the present knowledge and the future trends of research for combining the classical view of grasslands as a resource for secure feeding of an increasing human population with the more recent perspective of the contribution of grasslands to the mitigation of environmental impacts and biodiversity erosion as consequences of human society activities The chapters are organized within five sections dealing with the different functions and the main ecosystem services expected from grasslands i domestic herbivore feeding and animal production ii the regulation of biogeochemical cycles and its consequences for the environment iii dynamics of biodiversity hosted by grasslands iv integration of grasslands within sustainable animal production systems and v interactions of grassland areas with other land use systems at the landscape level

Burro Program has not used scientifically rigorous methods to estimate the population sizes of horses and burros to model the effects of management actions on the animals or to assess the availability and use of forage on rangelands Evidence suggests that horse populations are growing by 15 to 20 percent each year a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems Promising fertility control methods are available to help limit this population growth however In addition science based methods exist for improving population estimates predicting the effects of management practices in order to maintain genetically diverse healthy populations and estimating the productivity of rangelands Greater transparency in how science based methods are used to inform management decisions may help increase public confidence in the Wild Horse and Burro Program
