Rangelands A Resource Under Siege Proceedings Of The Second Inter Rangeland Congress:

Rangelands: A Resource Under Siege P. J. Joss, P. W. Lynch, O. B. Williams, 1986 This volume comprises the proceedings of the Second International Rangelands Congress held in Adelaide Australia in May 1984 and includes some 350 contributions drawn from 43 different countries The Congress addressed the problem of the conflict between land users and the degradation of this valuable resource Some 40% of the Earth's land surface is arid or semi-arid and therefore unsuitable for agricultural cultivation Collectively these lands are known as rangelands and in their natural state they constitute a habitat for grazing animals both domestic and wild Despite their low productivity rangelands have been used for thousands of years as a source of food and fibre but other uses such as mining tourism recreation and conservation are exerting increasing demands The result is often conflict between land users and degradation of the resource **Vegetation science**

applications for rangeland analysis and management P.T. Tueller, 2012-12-06 Natural grasslands pastures and meadows are among the vegetation types most frequently investigated with phytosociological methods This was one of the reasons why volume 13 Application of vegetation science to grassland husbandry and agriculture edited by W Krause appeared as one of the first volumes of this handbook It appeared under the chief editorship of Prof R Tiixen and in his time main emphasis of the handbook was placed on Zürich Montpellier methods and the European vegetation When we redesigned the handbook we felt the need to include other methods and aims of grassland analyses as well as a more global coverage of grasslands Especially the natural dry and semidry areas of the world needed to be covered was very fortunate in getting Prof Tueller of the University of Reno I Nevada as an editor for this volume He and the colleagues he motivated to compile volume 14 on Application of vegetation science to rangeland analysis and management have created a truly global coverage of the topics interesting for vegetation analyses in natural grasslands Since volume 13 covered the problems of anthropogenically created grasslands this topic was not expressly treated in order to avoid duplication For the same reason no specific attempt was made to get more papers from Europe and the temperate forest region in general The cooperation with Dr Tueller has been very rewarding for me Applications of Seasonal Climate Forecasting in Agricultural and Natural Ecosystems Graeme L. Hammer, Neville Nicholls, Christopher Mitchell, 2013-03-09 Climate variability has major impacts in many parts of the world including Australia Developments in understanding of the El Niño Southern Oscillation Phenomenon have introduced some skill in seasonal to inter annual climate forecasting Can this skill be harnessed to advantage Or do we just continue to observe these impacts How does a decision maker managing an agricultural or natural ecosystem modify decisions in response to a skillful but imprecise seasonal climate forecast Using Australian experience as a basis this book focuses on these questions in pursuing means to better manage climate risks The state of the science in climate forecasting is reviewed before considering detailed examples of applications to farm scale agricultural decisions such as management of cropping and grazing systems regional and national scale agricultural decisions such as commodity trading and government policy and

natural systems such as water resources pests and diseases and natural fauna Many of the examples highlight the participatory and inter disciplinary approach required among decision makers resource systems scientists analysts and climate scientists to bring about the effective applications The experiences discussed provide valuable insights beyond the geographical and disciplinary focus of this book The book is ideally suited to professionals and postgraduate students in ecology agricultural climatology environmental planning and climate science

New Perspectives on Nitrogen Cycling in the Temperate and Tropical Americas Alan R. Townsend, 2012-12-06

Inputs of nitrogen to terrestrial and aquatic ecosystems have increased several fold over the last one hundred and fifty years with the steepest increases during the last four decades The expansion of fertilizer manufacture and use the increase in fossil fuel combustion the intensification of animal husbandry and widespread cultivation of N₂ fixing crops have all contributed to the dramatic increase in N inputs The increase has been most rapid in Northern Hemisphere NH temperate ecosystems but presently subtropical and tropical regions of Asia are also experiencing an explosive increase in N inputs to terrestrial ecosystems W Chameides pers comm

Galloway et al 1996 Projected increases in N deposition for these tropical and subtropical regions with a high natural background of N inputs exceed increases projected for temperate and arctic regions Cleveland et al submitted Galloway et al 1994 Holland Lamarque 1997a Compared to biological N fixation N deposition is becoming a proportionately greater source of N to terrestrial and aquatic ecosystems worldwide Vitousek et al 1997 6 The nitrogen contained in the atmosphere as N₃ 9 10 Tg Tg 2 12 10 g is the largest reservoir of N in the Earth system Warneck 1988 However this paper focuses on the nitrogen emissions and deposition that have been transformed from N₂ into reactive forms that are biologically available g Vitousek et al 1997

Landscape Ecology, Function and Management J Ludwig, D Tongway, K Hodgkinson, D Freudenberger, J Noble, 1996-11-01

This book encapsulates the extensive knowledge developed by CSIRO's National Rangelands Program on how rangeland landscapes function and the implications for management It looks at the ecology of rangeland landscape processes and deals with what happens when things go wrong when a landscape loses its ability to efficiently capture and store water and nutrients a state the authors call dysfunctional Ways of managing rangelands in response to understanding landscape function are also considered The concluding Section looks to the future providing some scenarios for the way rangeland landscapes may be used in 2020

Big Sagebrush Bruce Leigh Welch, 2005

Pioneers traveling along the Oregon Trail from western Nebraska through Wyoming and southern Idaho and into eastern Oregon referred to their travel as an 800 mile journey through a sea of sagebrush mainly big sagebrush *Artemisia tridentata* Today approximately 50 percent of the sagebrush sea has given way to agriculture cities and towns and other human developments What remains is further fragmented by range management practices creeping

expansion of woodlands alien weed species and the historic view that big sagebrush is a worthless plant Two ideas are promoted in this report 1 big sagebrush is a nursing mother to a host of organisms that range from microscopic fungi to large mammals and 2 many range management practices applied to big sagebrush ecosystems are not science based **Recent Reports** ,1985 **Linking Social and Ecological Systems** Fikret Berkes,Carl Folke,Johan Colding,2000-04-13 It is usually the case that scientists examine either ecological systems or social systems yet the need for an interdisciplinary approach to the problems of environmental management and sustainable development is becoming increasingly obvious Developed under the auspices of the Beijer Institute in Stockholm this new book analyses social and ecological linkages in selected ecosystems using an international and interdisciplinary case study approach The chapters provide detailed information on a variety of management practices for dealing with environmental change Taken as a whole the book will contribute to the greater understanding of essential social responses to changes in ecosystems including the generation accumulation and transmission of ecological knowledge structure and dynamics of institutions and the cultural values underlying these responses A set of new or rediscovered principles for sustainable ecosystem management is also presented **Linking Social and Ecological Systems** will be of value to natural and social scientists interested in sustainability **Rethinking Invasion Ecologies from the Environmental Humanities** Jodi Frawley,Iain McCalman,2014-02-24 Research from a humanist perspective has much to offer in interrogating the social and cultural ramifications of invasion ecologies The impossibility of securing national boundaries against accidental transfer and the unpredictable climatic changes of our time have introduced new dimensions and hazards to this old issue Written by a team of international scholars this book allows us to rethink the impact on national regional or local ecologies of the deliberate or accidental introduction of foreign species plant and animal Modern environmental approaches that treat nature with na ve realism or mobilize it as a moral absolute unaware or unwilling to accept that it is informed by specific cultural and temporal values are doomed to fail Instead this book shows that we need to understand the complex interactions of ecologies and societies in the past present and future over the Anthropocene in order to address problems of the global environmental crisis It demonstrates how humanistic methods and disciplines can be used to bring fresh clarity and perspective on this long vexed aspect of environmental thought and practice Students and researchers in environmental studies invasion ecology conservation biology environmental ethics environmental history and environmental policy will welcome this major contribution to environmental humanities *Proceedings* Society for Range Management. Meeting,1997 **Proceedings--limits of Acceptable Change and Related Planning Processes** ,1997 **Contesting Views and Changing Paradigms** Annika Dahlberg,1994 **General Technical Report INT.** ,1997 **The Transformation of Nomadic Society in the Arab East** Martha Mundy,Basim Musallam,2000-11-09 In this 2000 book Martha Mundy and Basim Musallam bring together an international team of contributors consisting of archaeologists geographers historians anthropologists and agronomists in a penetrating

interdisciplinary account of the transformation of nomadic society The chapters provide an integrated analysis of the changing relations of ecology economy and socio political organisation in the steppes of the central Middle East documenting the longue dur e of history alongside the more rapid transformations of the twentieth century A series of maps and figures illustrate the narrative while a bibliographic essay analyses the existing literature This is an accessible and interactive book which provides a comprehensive overview of a fascinating and complex society It will attract readers from a variety of disciplines including those interested in contemporary environmental and development issues **Proceedings RMRS.**,1998 **Shrubland Ecosystem Genetics and Biodiversity** E.
