*Rapid Methods for Analysis of Biological Materials in the Environment* Peter J. Stopa, Michael A. Bartoszcze, 2013-04-17

Contrary to common belief infectious diseases are not as well under control as we would like. We are now at a crossroads regarding the impact of the environment on infectious diseases. Renewed interest in biological weapons and the emergence of new pathogens coupled with a better understanding of the impact of infectious agents on other conventional diseases has led us to realise that we can no longer remain complacent about the impact of infectious agents on human, animal and crop health. The present book first discusses current and emerging military and civilian policies on the environment. In addition, the impact of environmental biology on the future of space exploration is discussed, especially in reference to the Mars mission. There follows a discussion of the state of bacteria in the environment with a presentation of current and emerging techniques of microbial investigation. Finally, two case studies are presented on the impact of these techniques on both political and environmental problems.

Traditionally, resources on terrorism and counterterrorism tend to focus on the social, behavioral and legal aspects of the subject, with minimal emphasis on the scientific and technological aspects. Taking into account these practical considerations, the second edition of *Science and Technology of Terrorism and Counterterrorism* discusses the nature of terrorism and the materials used by terrorists. It describes how intelligence professionals and law enforcement personnel can detect and destroy these materials and how they can deal with terrorist groups. This volume begins by introducing the shift in analysis of terrorist attacks after September 11, 2001, and summarizes selected case studies. It discusses the origin and nature of terrorism and the factors involved in diplomacy. Covering a broad range of topics, the book examines aerosol dispersion of toxic materials, bioterrorism and the manufacture, detection and delivery of biological agents, agricultural terrorism, nuclear terrorism and nuclear weapons systems, threats and safeguards, chemical terrorism including manufacture, detection, delivery and decontamination, cyber terrorism, personal protective equipment, the role of government at federal, state and local levels, the role of international agencies and their resources, capabilities and responsibilities, the National Infrastructure Protection Plan. As terrorist activities increase globally, it is critical that those charged with protecting the public understand the myriad of ways in which terrorists operate. While we cannot predict where, when and how terrorists will strike, our vigilance in staying abreast of the terrorist threat is the only way to have a fighting chance against those who seek to destroy our world.

Luepke,2012-12-06 Ever since the industrial revolution large numbers of environmentally hazardous materials are introduced into the global environment annually a list of all substances which are at present regarded as environmentally hazardous might contain thousands of compounds and new substances are still being added Several major activities are necessary to adequately ensure the protection of human health and the environment from the often subtle effects of these materials These activities include toxicological and ecological research control technology development the promulgation of

regulatory guidelines and standards and the monitoring of environmental materials and specimen banking In the absence of effective monitoring environmental materials and specimen banking the detection of serious environmental contamination from pollutants may occur only after critical damage has been done Environmental problems are independent of national boundaries and international collaborative programmes should be encouraged Sponsoring organisations and other international and national bodies should encourage monitoring and specimen bank programmes and develop harmonised systems for data acquisition and evaluation An international pilot programme of monitoring and specimen banking is needed and is technically feasible The conclusions and recommendations for both implementation and research should be of interest to other international and national bodies in addition to the three organisations sponsoring this International Workshop Nevertheless this joint sponsorship should help to assure that the resulting conclusions and recommendations will have a worldwide audience and that effective coordination of existing programmes will be possible
