Rapid Visual Screening of Buildings for Potential Seismic Hazards Christopher Rojahn, United States. Federal Emergency Management Agency, Applied Technology Council, 1996 Rapid Visual Screening of Buildings for Potential Seismic Hazards: A Handbook Federal Emergency Agency, U. S. Department Security, 2013-04-03 This FEMA 154 Report Rapid Visual Screening of Buildings for Potential Seismic Hazards A Handbook is the first of a two volume publication on a recommended methodology for rapid visual screening of buildings for potential seismic hazards The technical basis for the methodology including the scoring system and its development are contained in the companion FEMA 155 report Rapid Visual Screening of Buildings for Potential Seismic Hazards Supporting Documentation The rapid visual screening procedure RVS has been developed for a broad audience including building officials and inspectors and government agency and private sector building owners to identify inventory and rank buildings that are potentially seismically hazardous Although RVS is applicable to all buildings its principal purpose is to identify 1 older buildings designed and constructed before the adoption of adequate seismic design and detailing requirements 2 buildings on soft or poor soils or 3 buildings having performance characteristics that negatively influence their seismic response Once identified as potentially hazardous such buildings should be further evaluated by a design professional experienced in seismic design to determine if in fact they are seismically hazardous The RVS uses a methodology based on a sidewalk survey of a building and a Data Collection Form which the person conducting the survey hereafter referred to as the screener completes based on visual observation of the building from the exterior and if possible the interior The Data Collection Form includes space for documenting building identification information including its use and size a photograph of the building sketches and documentation of pertinent data related to

seismic performance including the development of a numeric seismic hazard score Once the decision to conduct rapid visual screening for a community or group of buildings has been made by the RVS authority the screening effort can be expedited by pre planning including the training of screeners and careful overall management of the process Completion of the Data Collection Form in the field begins with identifying the primary structural lateral load resisting system and structural materials of the building Basic Structural Hazard Scores for various building types are provided on the form and the screener circles the appropriate one For many buildings viewed only from the exterior this important decision requires the screener to be trained and experienced in building construction The procedure presented in this Handbook is meant to be the preliminary screening phase of a multi phase procedure for identifying potentially hazardous buildings Buildings identified by this procedure must be analyzed in more detail by an experienced seismic design professional Because rapid visual screening is designed to be performed from the street with interior inspection not always possible hazardous details will not always be visible and seismically hazardous buildings may not be identified as such Conversely buildings initially identified as potentially hazardous by RVS may prove to be adequate

Rapid Visual Screening of Buildings for Potential Seismic Hazards : a Handbook Federal Emergency Management Agency (U.S.),2017-08-03 The Rapid Visual Screening RVS handbook can be used by trained personnel to identify inventory and screen buildings that are potentially seismically vulnerable The RVS procedure comprises a method and several forms that help users to quickly identify inventory and score buildings according to the risk of collapse if hit by major earthquakes This third edition includes extensive updates including Update of the Basic Scores and Score Modifiers Update of the ground motion definitions Preparation of additional reference guides Inclusion of additional building types that are prevalent Inclusion of additional considerations such as nonstructural hazards existing retrofits building additions and adjacency Addition of an optional electronic scoring methodology and more Related products Natural Environmental Disasters resources collection is available here <https://bookstore.gpo.gov/catalog/natural-environmental-disasters> Other products produced by the U S Department of Homeland Security Federal Emergency Management Administration FEMA are available here <https://bookstore.gpo.gov/agency/federal-emergency-management-agency/fema> [Rapid Visual Screening of Buildings for Potential Seismic Hazards](#) ,1993-07 Graphs and data sheets *Rapid Visual Screening of Buildings for Potential Seismic Hazards* Applied Technology Council,1988

Multi Hazard Identification and Risk Assessment ,1997 Policy Guide to Steel Moment-Frame Construction
William J. Hall,2008-07 Prior to the 1994 Northridge and 1995 Kobe earthquakes engineers believed that steel moment frames would bend under earthquake loading but not break As a result this became one of the most common types of construction used for major bldgs in areas subject to severe earthquakes The discovery of the potential for fracturing in these frames called to question the adequacy of the building code provisions dealing with this type of construction and created a crisis of confidence In response FEMA issued this policy guide to provide a non technical summary of valuable information an understanding of the risk associated with steel moment frame buildings and the practical measures that can be taken to reduce this risk Illustrations **Promoting the Adoption and Enforcement of Seismic Building Codes** Robert B. Olshansky,1998 Provides background information and educational materials to help state officials promote the adoption and enforcement of state and local model building codes that contain the latest seismic provisions These codes can reduce the damage that will occur when future earthquakes strike at risk parts of the country It is intended for state earthquake program managers and hazard mitigation officers in the emergency management agencies of the states and territories prone to earthquakes It is designed to help you convince your state and local governments that codes are effective inexpensive and a good investment for the future of our communities Illustrated
