Butrica,2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation the story of the shuttle forms an inseparable part of a lesser known but no less important drama the search for a reusable single stage to orbit rocket Here an award winning student of space science Andrew J Butrica examines the long and tangled history of this ambitious concept from its first glimmerings in the 1920s when technicians dismissed it as unfeasible to its highly expensive heyday in the midst of the Cold War when conservative backed government programs struggled to produce an operational flight vehicle Butrica finds a blending of far sighted engineering and heavy handed politics To the first and oldest idea that of the reusable rocket powered single stage to orbit vehicle planners who belonged to what President Eisenhower referred to as the military industrial complex added experimental X aircraft like capabilities and eventually a faster cheaper smaller managerial approach Single Stage to Orbit traces the interplay of technology corporate interest and politics a combination that well served the conservative space agenda and ultimately triumphed not in the realization of inexpensive reliable space transport but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty first century D M Ashford **Digital Transformation in Semiconductor Manufacturing** Sophia Keil,Rainer Lasch,Fabian Lindner,Jacob Lohmer,2020-05-26 This open access book reports on cutting edge electrical engineering and microelectronics solutions to foster and support digitalization in the semiconductor industry Based on the outcomes of the European project iDev40 which were presented at the two first conference editions of the European Advances in Digital Transformation Conference EADCT 2018 and EADTC 2019 the book covers different multidisciplinary aspects related to digital transformation including technological and industrial developments as well as human factors research and applications Topics include modeling and simulation methods in semiconductor operations supply chain management issues employee training methods and workplaces optimization as well as smart software and
