Rapid Prototyping Manufacturing:

Rapid Manufacturing Duc Pham, S.S. Dimov, 2012-12-06 Rapid Manufacturing is a term that embraces rapid prototyping and rapid tooling. Rapid prototyping is an exciting new technology for quickly creating physical models and functional prototypes directly from CAD models. Rapid tooling generally concerns the production of tooling using parts manufactured by rapid prototyping. Rapid prototyping and rapid tooling are means for compressing the time to market of products and as such are competitiveness enhancing technologies. The book describes the characteristics and capabilities of the main known rapid prototyping processes. It covers in detail commercially available processes such as Stereolithography, SLA, Selective Laser Sintering, SLS, Fused Deposition Modelling, FDM, Solid Ground Curing, SGC, Laminated Object Manufacturing, LOM, and provides information on several other processes still under development. The book discusses various direct and indirect methods of producing soft tooling, firm tooling or bridge tooling and hard tooling based on rapid prototyping. The discussion is wide ranging and not found in other books published to date. Also special to the book is material on process optimisation. This was derived from work at the authors' Centre and is not available in other texts. The book places a strong emphasis on practical applications, devoting special chapters to both the applications of rapid prototyping and rapid tooling. The book contains an abundance of photographs and diagrams, some in colour, to illustrate clearly the principles of the machines and processes involved. The book does not require any special background. It should be of interest to manufacturing, industrial production, mechanical and materials engineers wishing to up date themselves on some of the most important developments in modern manufacture. The authors are from the Manufacturing Engineering Centre which conducts leading edge research into advanced manufacturing as well as providing a commercial rapid prototyping and tooling service to several hundred industrial customers.

Rapid Prototyping & Manufacturing Paul Francis Jacobs, 1992 This turnkey technology source provides an introduction to rapid prototyping and manufacturing RP M with emphasis on Stereolithography which represents the majority of all rapid prototyping systems currently in place. The content is based on theory, analysis and experiment with extensive test data including select case studies from the automotive, simultaneous engineering and medical sectors.

Venuvinod, Weiyin Ma, 2013-04-17 Since the dawn of civilization mankind has been engaged in the conception and manufacture of discrete products to serve the functional needs of local customers and the tools technology needed by other craftsmen In fact much of the progress in civilization can be attributed to progress in discrete product manufacture The functionality of a discrete object depends on two entities form and material composition For instance the aesthetic appearance of a sculpture depends upon its form whereas its durability depends upon the material composition An ideal manufacturing process is one that is able to automatically generate any form freeform in any material However unfortunately most traditional manufacturing processes are severely constrained on all these counts There are three basic

ways of creating form conservative subtractive and additive In the first approach we take a material and apply the needed forces to deform it to the required shape without either adding or removing material i e we conserve material Many industrial processes such as forging casting sheet metal forming and extrusion emulate this approach A problem with many of these approaches is that they focus on form generation without explicitly providing any means for controlling material composition In fact even form is not created directly They merely duplicate the external form embedded in external tooling such as dies and molds and the internal form embedded in cores etc Till recently we have had to resort to the subtractive approach to create the form of the tooling
