Radiation-Induced Processes of Adaptation Victoria L. Korogodina,Boris Florko,Ludmila P. Osipova,2013-05-21 In recent decades radiobiologists efforts have been directed at identifying the mechanisms of radiation effects the general mechanisms have since been studied extensively This book describes and analyzes radiation induced adaptation as processes produced in cells tissues and populations This viewpoint helps to understand the nature and factors of induced processes to determine the characteristics of observed radiation effects and their limitations The investigations presented here were founded on proper lab experiments ecological studies of plant population growth near an operating nuclear power plant and a thorough epidemiological examination of human populations living in territories polluted fifty years ago as well as on relevant published data This research demonstrates the radiation induced adaptation processes that continue even when the radiation itself is no longer at a critical background level The investigations utilized the method of statistical modeling on the basis of distributions on the number of abnormalities This method allows us to investigate the processes induced by low dose factors when accompanied by Darwinian selection in different systems the distribution parameters can then be used to study the characteristics of adaptation processes and system resistance The consequences of background level radiation continue to provoke debate and the mathematical bases of the adaptation model are shown while due consideration is paid to the components of adaptation instability selection and proliferation The book will be especially useful to specialists in radiation pollution ecology epidemiology and radiology for studies of radiation induced processes the method presented here can also be adapted to investigate low dose effects in other fields In addition the book presents a number of reviews in the fields of radiation biology including pioneering investigations in Russia which were previously unavailable to Western scientists

*Mathematical Methods for Population Genetics* G. Dahlberg,1946-11-30      **Machines like Us** Ronald J.

Brachman,Hector J. Levesque,2023-10-17 How we can create artificial intelligence with broad robust common sense rather than narrow specialized expertise It s sometime in the not so distant future and you send your fully autonomous self driving car to the store to pick up your grocery order The car is endowed with as much capability as an artificial intelligence agent can have programmed to drive better than you do But when the car encounters a traffic light stuck on red it just sits there indefinitely Its obstacle avoidance lane following and route calculation capacities are all irrelevant it fails to act because it lacks the common sense of a human driver who would quickly figure out what s happening and find a workaround In *Machines like Us* Ron Brachman and Hector Levesque both leading experts in AI consider what it would take to create machines with common sense rather than just the specialized expertise of today s AI systems Using the stuck traffic light and other relatable examples Brachman and Levesque offer an accessible account of how common sense might be built into a machine They analyze common sense in humans explain how AI over the years has focused mainly on expertise and suggest ways to endow an AI system with both common sense and effective reasoning Finally they consider the critical issue of how we can trust an autonomous machine to make decisions identifying two fundamental requirements for trustworthy autonomous AI systems having reasons for doing what they do and being able to accept advice Both in the end are dependent on having common sense      **Intelligent Decision Technologies** Rui Neves-Silva,Lakhmi C.
