Library,1973 *Physical Chemistry of Organic Solvent Systems* A. Covington,2012-12-06 We believe this to be the first monograph devoted to the physicochemical properties of solutions in organic solvent systems Although there have 1 been a number of books on the subject of non aqueous solvents 4 they have been devoted almost entirely to inorganic solvents such as liquid ammonia liquid sulphur dioxide etc A variety of new solvents such as dimethylformamide dimethylsulphoxide and propylene carbonate have become commercially available over the last twenty years Solutions in these solvents are of technological interest in connection with novel battery systems and chemical synthesis while studies of ion solvation and transport properties have fostered academic interest This monograph is primarily concerned with electrolytic solutions although discussion of non electrolyte solutions has not been excluded We have deliberately omitted consideration of the important area of solvent extraction since this has been adequately covered elsewhere Our contributors were asked to review and discuss their respective areas with particular reference to differences in technique necessitated by use of non aqueous solvents while not reiterating facts well known from experience with aqueous solutions We have striven to build their contributions into a coherent and consistent whole We thank our contributors for following our suggestions so ably and for their forbearance in the face of our editorial impositions *Dimethylsulphide: Oceans, Atmosphere and Climate* (1992) G. Restelli,G. Angeletti,1993-09-30

Dimethylsulphide DMS emitted by marine phytoplankton is the second most important source of atmospheric sulphur after anthropogenic SO₂. In the atmosphere DMS is transformed into condensable acidic sulphur products and through gas to particle conversion it becomes the most important natural source of atmospheric sulphate aerosols. Possible climatic effects have been suggested linked to the negative radiative forcing due to scattering of solar radiation and especially to modification of cloud albedo over oceans by sulphate aerosol particles. These effects occur in addition to those deriving from the superimposed anthropogenic component of the atmospheric sulphate. Understanding the cycle of DMS in the marine troposphere and its interaction with the aerosol budget and cloud properties has become a key research target in these last years. Our knowledge of the many processes involved is still fragmentary however. This book which updates the state of our comprehension of the marine DMS cycle with special regard to its climatic impact will be of interest to marine biologists, atmospheric chemists, aerosol physicists and climatologists and to scientists concerned with changes in the Earth's climate.
