Michael Cyril William Hunter

Rationality And Ritual The Windscale Inquiry And Nuclear Decisions In Britain Bshs Monographs:

Rationality and Ritual Brian Wynne, 1982 *Nuclear Entrapment* William Walker, 1999 **The International Politics of Nuclear Waste** Andrew Blowers, David Lowry, Barry D. Solomon, 1991-04-01 Looking at the politics of nuclear waste this book examines the subject from an international standpoint Other works by the author Andrew Blowers include *The Limits of Power and Something in the Air* and he has been co editor on books such as *Nuclear Power in Crisis* **The Cambridge Urban History of Britain** Peter Clark, David Michael Palliser, Martin J. Daunton, 2000 The process of urbanisation and suburbanisation in Britain from the Victorian period to the twentieth century **Unquiet Pasts** Stephanie Koerner, 2016-12-05 This important book addresses critical themes in the development of archaeology as a reflexive self critical discipline in the modern world It explores the ethical political and cultural tensions and responsibilities which need to be addressed by archaeologists when working within networks of global ecologies and communities examining how authoritarian traditions can exacerbate the divide between expert and public knowledge Moreover it analyses how localized acts of archaeology relate to changing conceptions of risk heritage culture identity and conflict Bringing insights from Alain Schnapp Michael Shanks Isabelle Stengers Bruno Latour Ulrich Beck John Urry and others to cross disciplinary discussions of these themes *Unquiet Pasts* shows how archaeological discourse can contribute towards engaging and understanding current dilemmas It also shows how archaeology as a localized and responsibly exercised practice can play a part in building our commonly shared and experienced world The Politics of Chemical Risk: Scenarios for a Regulatory Future R. Bal, Willem Halffman, 2013-04-17 All industrial countries have developed regulatory systems to assess and manage the risk of chemical substances to the working and natural environment The pressure to harmonize these often specialized regulatory systems is increasingly strong at the international level Such harmonization not only entails the assessment of particular chemicals but also the way assessment procedures and their boundary with risk management is organized As these initiatives intensify they increasingly raise important questions of how to integrate national differences in the international regulatory arena How will national consultation procedures relate to international decision making on chemical risks How will differences in national risk assessment procedures be accommodated How will the international regulatory system be integrated with different national styles of regulation and government Presenting the experiences and insights of both people from within the worlds of risk assessment and management and from the field of Science Studies this book forms a state of the art in the discussion on the Politics of Chemical Risk By offering scenarios or sketches of a regulatory future it points to the choices that can be made and the opportunities to be explored As such it offers an agenda for environmental and occupational scientists policy makers and students of science and technology alike *Handbook of Science and Technology Studies* Sheila Jasanoff, Gerald E Markle, James C Peterson, Trevor Pinch, 2001-11-01 This volume represents the social constructivist turn of the field It is evident that social constructivism made a major impact on the field during the 1970s and

1980s The diverse papers included here highlight the role of ethnography in STS In addition we are exposed to new perspectives of the multicultural and gendered nature of knowledge production Science Technology and Society For the most current comprehensive resource in this rapidly evolving field look no further than the Revised Edition of the Handbook of Science and Technology Studies This masterful volume is the first resource in more than 15 years to define summarize and synthesize this complex multidisciplinary international field Tightly edited with contributions by an internationally recognized team of leading scholars this volume addresses the crucial contemporary issues both traditional and nonconventional social studies political studies and humanistic studies in this changing field Containing theoretical essays extensive literature reviews and detailed case studies this remarkable volume clearly sets the standard for the field It does nothing less than establish itself as the benchmark one that will carry the field well into the next century The long awaited Handbook of Science and Technology Studies sponsored by the Society for Social Studies of Science is a truly substantial work both in size and in the breadth of its many contributions It is a rich and valuable guide to much that is transpiring in the field of Science and Technology Studies In the editors words it is an unconventional but arresting atlas of the field at a particular moment in its history Science Technology Society This book is not only an important resource for practitioners but it also may help to spark the curiosity of those who are outside the field including scientists and engineers themselves and so pull the half seen world of science and technology studies even more fully into the light of day American Scientist The book as a whole is an impressive testimony to the vitality of a burgeoning field New Scientist It reflects the international and interdisciplinary nature of the society An excellent resource Choice *Environmental Problem Solving* Alan Miller, 2013-12-01 Human influences create both environmental problems and barriers to effective policy aimed at addressing those problems In effect environmental managers manage people as much as they manage the environment Therefore they must gain an understanding of the psychological and sociopolitical dimensions of environmental problems that they are attempting to resolve In *Environmental Problem Solving* Alan Miller reappraises conventional analyses of environmental problems using lessons from the psychosocial disciplines He combines the disciplines of ecology political sociology and psychology to produce a more adaptive approach to problem solving that is specifically geared toward the environmental field Numerous case studies demonstrate the practical application of theory in a way that is useful to technical and scientific professionals as well as to policy makers and planners Alan Miller is Professor of Psychology at the University of New Brunswick **The Philosophy of Expertise** Evan Selinger, Robert P. Crease, 2006 From the use of expert testimony in the courtroom to the advice we rely on to solve key economic political and social problems expertise is an essential part of our decision making process However the extent to which experts can be trusted is a subject of persistent and contentious debate *The Philosophy of Expertise* is the first collection to explore the fundamental philosophical issues surrounding these authorities and their expert knowledge Part 1 considers the problems surrounding the issue of trust and deference part 2 launches a

phenomenological clarification of expertise that pinpoints the universal structures embodied in cognition and affect and part 3 examines the consequences of the social and technical externalization of expertise Contributors including Edward Said Alvin Goldman Peter Singer Hubert Dreyfus Julia Annas Harry Collins and Don Ihde draw on a number of intellectual approaches to explore the justification of expert authority the potentially dangerous role of expertise in a liberal democratic society how laypeople can critique experts and the social and ideological character of expert advice The contributors also discuss the reasoning process of judges and juries the ancient Greek view of moral conduct and the incorporation of experts into governmental bureaucracy By honestly tackling the legitimacy and consistency of various positions this volume sheds much needed light on the theoretical dimensions of a controversial and pervasive practice Contributors Alvin I Goldman Don Ihde Edward Said Evan Selinger and John Mix Evan Selinger and Robert P Crease H M Collins and Robert Evans H I ne Mialet Hubert Dreyfus John Hardwig Julia Annas Paul Feyerabend Peter Singer Scott Brewer Steve Fuller Steven Turner

computational design generative design primer - Jan 28 2023

web computational design computational design is not any one algorithm or off the shelf process you can utilize rather we describe it as an approach whereby a designer defines a series of instructions rules and relationships that precisely identify the steps necessary to achieve a proposed design and its resulting data or geometry crucially

computational design arts design architecture unsw sydney - Apr 30 2023

web computational design uses digital technologies to enhance and optimise design processes through algorithms and cutting edge technologies computational designers develop creative technical and aesthetic solutions to solve challenges of the 21st century why study computational design at unsw

computational design the future of how we make things is - Jun 01 2023

web sep 4 2018 while designers traditionally rely on intuition and experience to solve design problems computational design is a new design methodology that can literally produce hundreds or thousands of design permutations to find the absolute best solution to a problem the shifting roles of humans and computers

computational design in architecture defining parametric - Dec 27 2022

web jun 1 2020 this paper discusses computational design cd and proposes an improved and sound taxonomy for a set of key cd terms namely parametric generative and algorithmic design based on an extensive literature review from which different definitions by various authors were collected analyzed and compared previousarticlein issue

introduction to computational design subsets challenges in - Feb 26 2023

web dec 3 2021 computational design cd is not just automating existing traditional processes or tedious tasks it is about shifting the way we think and design cd systems can be grouped into three main categories
