Re Thinking American Education A Philosophy Of Teaching And Learning:

Re-thinking American Education Jesse Glenn Gray,1984 **Rethinking Science Education** Roland M.

Schulz,2014-08-01 This book presents a philosophy of science education as a research field as well as its value for curriculum instruction and teacher pedagogy It seeks to re think science education as an educational endeavour by examining why past reform efforts have been only partially successful including why the fundamental goal of achieving scientific literacy after several reform waves has proven to be so elusive The identity of such a philosophy is first defined in relation to the fields of philosophy philosophy of science and philosophy of education It argues that educational theory can support teacher s pedagogical content knowledge and that history philosophy and sociology of science should inform and influence pedagogy Some case studies are provided which examine the nature of science and the nature of language to illustrate why and how a philosophy of science education contributes to science education reform It seeks to contribute in general to the improvement of curriculum design and science teacher education The perspective to be taken on board is that to teach science is to have a philosophical frame of mind about the subject about education about one s personal teacher identity **Rethinking the**

Rethinking Liberal Education Nicholas H. Farnham,Adam Yarmolinsky,1996-01-11 Liberal education has always had its share of theorists believers and detractors both inside and outside the academy The best of these have been responsible for the development of the concept and of its changing tradition Drawn from a symposium jointly sponsored by the Educational Leadership program and the American Council of Learned Societies this work looks at the requirements of liberal education for the next century and the strategies for getting there With contributions from Leon Botstein Ernest Boyer Howard Gardner Stanley Katz Bruce Kimball Peter Lyman Susan Resneck Pierce Adam Yarmolinsky and Frank Wong Rethinking Liberal Education proposes better ways of connecting the curriculum and organization of liberal arts colleges with today s challenging economic and social realities The authors push for greater flexibility in the organizational structure of academic departments and argue that faculty should play a greater role in the hard discussions that shape their institutions Through the implementation of interdisciplinary and collaborative approaches to learning along with better integration of the curriculum with the professional and vocational aspects of the institution this work proposes to restore vitality to the curriculum The concept of rethinking liberal education does not mean the same thing to every educator To one

it may mean a strategic shift in requirements to another the reformulation of the underlying philosophy to meet changing times Any significant reform in education needs careful thought and discussion Rethinking Liberal Education makes a substantial contribution to such debates It will be of interest to scholars and students administrators and anyone concerned with the issues of modern education

Rethinking Teacher Education Anne Edwards, Peter Gilroy, David Hartley, 2005-07-08 Rethinking Teacher Education is a thorough and critical analysis of the ambivalences and uncertainties that face those in teacher education. The authors draw on their different experiences of teacher education to try to make sense of current practices and where they might lead. The issues addressed include political and economic uncertainty and teacher education, philosophical uncertainty and teacher education, modernist policy solutions, psychology, an agent of modernity in teacher education, sociocultural and other collaborative responses to uncertainty. The book will be of interest to all those involved in teacher education, including sociologists, psychologists, and philosophers of education.

Rethinking Education in the Age of Technology Allan Collins, Richard Halverson, 2018 The digital revolution in education is well under way with more and more learners plugged into the online world. How can schools make the most of both the technology and the learning potential of today's born-digital students? In this new edition of their groundbreaking book, Collins and Halverson argue that new technologies have transformed our workplaces, our lives, and our culture, and it is time we take the next step to transform learning in and out of schools. The authors show how, over time, public schooling was so successful that it became synonymous with education. But new technologies risk making schools obsolete, and this book explains why and how today's educators, policymakers, and communities must adapt to provide all learners with access to the new learning tools of the 21st century. Allan Collins and Richard Halverson are not, by any means, arguing that teachers or schools should go away. Rather, they are saying that they should open their doors and windows, connect to other real and virtual places, be crucial tour guides, and send their children on flights of fancy through our modern memory palaces. From the Foreword by James Paul Gee, Arizona State University: "The most convincing account I've read about how education will change in the decades ahead; the authors' analyses are impressive, fair-minded, and useful." Howard Gardner, Harvard Graduate School of Education, from first edition.

Conceptualizing a praxis for LGBTQ allies to use in teaching and learning about sexual identity in ways that can transform educational practices and policies, this work bridges gaps between theory and practice, liberal and postmodern thought, invention and intervention. creating partnerships In current times colleges of education and local school districts need each other like never before School districts struggle with pipeline recruitment and retention issues Colleges of education face declining enrollment and a shifting educational landscape that fundamentally changes the way that teachers are trained and what local school districts expect their teachers to be able to do It is with these overlapping constraints and converging interests that partnerships emerge as a foundational strategy for strengthening the education of our teachers With nearly 80 contributors from 16 states and Jamaica representing 39 educational institutions the partnerships described in this book are different from the ways in which colleges of education and school districts have traditionally worked with one another In the past these loose relationships centered primarily on student teaching and or field experience placements In this arrangement the relationship was directed towards ensuring that the local schools were amenable to hosting students from the college of education so that the student candidate could complete the requirements to earn a teaching license In our view this paradigm needs to be enlarged and shifted
