Reaction Heats And Bond Strengths:

Reaction Heats and Bond Strengths C. T. Mortimer, 2017-05-04 Reaction Heats and Bond Strengths presents the variations in the heats of particular types of reaction This book covers a variety of topics including the hydrogenation and polymerization of olefinic compounds the dissociation of organic and organo metallic compounds and the molecular addition compounds Organized into 10 chapters this book begins with an overview of the concept of bond energy that can be very useful where a comparison is being made between two dissimilar molecules This text then examines the strain in cyclopropane and cyclobutane which is largely a result of angular strain due to compression of the tetrahedral angle in the carbon carbon bonding Other chapters consider the experimental thermochemical data for some conjugated molecules This book discusses as well the significance of representing a molecule which originated from the concept of resonance The final chapter deals with bond strength in phosphorus silicon and sulfur compounds This book is a valuable resource for postgraduate students

Essentials of Physical Chemistry 28th Edition Bahl Arun/ Bahl B.S. & Tuli G.D., 2022-03 Essentials of Physical Chemistry is a classic textbook on the subject explaining fundamentals concepts with discussions illustrations and exercises With clear explanation systematic presentation and scientific accuracy the book not only helps the students clear misconceptions about the basic concepts but also enhances students ability to analyse and systematically solve problems This bestseller is primarily designed for B Sc students and would equally be useful for the aspirants of medical and engineering entrance examinations

Know Your 'O' Level Chemistry - A Study Guide , *Chemical Kinetics of Gas Reactions* V. N. Kondrat'Ev, 2016-01-22 Chemical Kinetics of Gas Reactions explores the advances in gas kinetics and thermal photochemical electrical discharge and radiation chemical reactions This book is composed of 10 chapters and begins with the presentation of general kinetic rules for simple and complex chemical reactions The next chapters deal with the experimental methods for evaluating chemical reaction mechanisms and some theories of elementary chemical processes These topics are followed by discussions on certain class of chemical reactions including unimolecular bimolecular and termolecular reactions The remaining chapters examine gas reactions such as molecular collisions photochemical reactions chemical reactions in electrical discharge chain reactions and combustion This book will be of value to reaction kinetics engineers and researchers

Chemical Bonds and Bonds Energy R Sanderson, 2012-12-02 Chemical Bonds and Bonds Energy Second Edition provides information pertinent to the fundamental aspects of contributing bond energy and bond dissociation energy This book explores the values that are useful in the interpretation of significant phenomena such as product distribution and reaction mechanisms Organized into 12 chapters this edition begins with an overview of the quantitative relationship among three basic properties of an atom namely nonpolar covalent radius electronegativity and homonuclear single covalent bond energy This text then examines the quantitative means of evaluating the partial atomic charges that result from initial differences in the electromagnetivity of atoms that form a compound Other chapters consider the recognition of the

reduction of bond weakening not by multiplicity and in certain types of single covalent bonds The final chapter deals with the application of the principal ideas and techniques to the oxidation of ethane This book is a valuable resource for organic and inorganic chemists *An Introduction To Chemical Thermodynamics* R P Rastogi, 2009-11-01

Kondratiev,E.E. Nikitin,2012-12-06 The present monograph appears after the death of Professor V N Kondratiev one of those scientists who have greatly contributed to the foundation of contemporary gas kinetics The most fundamental idea of chemical kinetics put forward at the beginning of the twentieth century and

connected with names such as W Nernst M Bodenstein N N Semenov and C N Hinshelwood was that the complex chemical reactions are in fact a manifestation of a set of simpler elementary reactions involving but a small number of species V N Kondratiev was one of the first to adopt this idea and to start investigations on the elementary chemical reactions proper These investigations revealed explicitly that every elementary reaction in turn consisted of many elementary events usually referred to as elementary processes It took some time to realize that an elementary reaction represented in a very simple way by a macroscopic kinetic equation can be described on a microscopic level by a generalized Boltzmann equation Nevertheless up to the middle of the twentieth century gas kinetics was mainly concerned with the interpretation of complex chemical reactions via a set of elementary reactions But later on the situation changed drastically First the conditions for reducing microscopic equations to macroscopic ones were clearly set up These are essentially based on the fact that the small perturbations of the Maxwell Boltzmann distribution are caused by the reaction proper
