The Mechanisms of Reactions Influencing Atmospheric Ozone Jack George Calvert, John Joseph Orlando, William R. Stockwell, Timothy J. Wallington, 2015

Ozone an important trace component is critical to life on Earth and to atmospheric chemistry The presence of ozone profoundly impacts the physical structure of the atmosphere and meteorology Ozone is also an important photolytic source for HO radicals the driving force for most of the chemistry that occurs in the lower atmosphere is essential to shielding biota and is the only molecule in the atmosphere that provides protection from UV radiation in the 250 300 nm region However recent concerns regarding environmental issues have inspired a need for a greater understanding of ozone and the effects that it has on the Earth's atmosphere The Mechanisms of Reactions Influencing Atmospheric Ozone provides an overview of the chemical processes associated with the formation and loss of ozone in the atmosphere meeting the need for a greater body of knowledge regarding atmospheric chemistry Renowned atmospheric researcher Jack Calvert and his coauthors discuss the various chemical and physical properties of the earth's atmosphere the ways in which ozone is formed and destroyed and the mechanisms of various ozone chemical reactions in the different spheres of the atmosphere The volume is rich with valuable knowledge and useful descriptions and will appeal to environmental scientists and engineers alike A thorough analysis of the processes related to tropospheric ozone The

Mechanisms of Reactions Influencing Atmospheric Ozone is an essential resource for those hoping to combat the continuing and future environmental problems particularly issues that require a deeper understanding of atmospheric chemistry

**The Caspian Sea Environment** Andrey G. Kostianoy, Aleksey N. Kosarev, 2005-12 The systematic description of the knowledge accumulated on the physical oceanography marine chemistry and pollution and marine biology of the Caspian Sea forms the basis of this book It presents the principal characteristic features of the environmental conditions of the sea and their changes in the second half of the 20th century At present the principal problems of the Caspian Sea are related to the

interannual sea level changes and their forecast and to the estimation of the intensity of the chemical pollution of the sea and its impact upon the biota Special attention is paid to socio economic legal and political issues in the Caspian Sea region This publication is based on numerous observational data collected by the authors of the chapters during sea expeditions on the archive data of several Russian oceanographic institutions as well as on the broad scientific literature mainly published in Russian editions This book is addressed to the specialists concerned with research in various fields of physical oceanography marine chemistry pollution studies and biology solving a wide scope of problems from the regional climate to the mesoscale processes and using a variety of methods from remote sensing of the seas to numerical and laboratory modeling

*Transformation Products of Synthetic Chemicals in the Environment* Alistair Boxall, 2009-09-22 When a synthetic chemical is released into the environment it may be degraded by abiotic and biotic processes These degradation processes usually involve a cascade of reactions resulting in the formation of a number of transformation products While we usually know a great deal about the environmental properties fate and effects of parent synthetic chemicals our understanding of the impacts of transformation products is much less developed As such this volume brings together chapters from leading researchers in the field of transformation products in the environment and describes how these products are formed how they move through the environment and their environmental effects The book also presents modelling and analytical approaches for understanding the occurrence fate and effects of transformation products in the environment It is of interest to scientists in academia the chemicals industry and regulators as well as graduate students in Environmental Chemistry and Ecotoxicology
