Readers Of The Of Life Contextualizing Developmental Evolutionary Biology:

Readers of the Book of Life Anton Markos, Anton Markoš, Associate Professor in the Faculty of Sciences in the Department of Philosophy and History of Sciences and the Center of Theoretical Study Anton Markos, 2002 This book should interest scholars in both biology and the humanities To bring both kinds of reader to a common platform the first part compares two problem solving strategies the objectivist approach common in natural sciences and hermeneutics as used in the humanities The second part surveys aspects of the development of twentieth century biology also accentuating branches that never became part of today's mainstream The third part reviews a large body of recent evidence which can be interpreted in favor of the author's arguments BOOK JACKET

Epigenetic Processes and Evolution of Life Jana Švorcová, Anton Markoš, 2019-01-15 The book covers the possible story of emergence of life and its subsequent evolution emphasizing the necessary evolutionary step negotiation of a common language set which kept all inhabitants in the biosphere together ensuring a basic level of understanding among them The book focuses on protocols of communication both genetic and epigenetic representing norms shared and understood across the whole biosphere enabling a plethora of holobiotic relationships Cooperative nature of organismal evolution and epigenetic processes as a major force in evolution are also covered Topics discussed are illustrated in detail on selected casuistics

The Tinkerer's Accomplice J. Scott Turner, 2009-06-30 A physiologist presents a provocative and scientifically rigorous new perspective on Darwinism design and why the living

world works so well When they contemplate nature they see evidence of design at work So it is jarring when biologists insist that this perception is all wrong What most people see as design they say purposeful directed even intelligent is only an illusion But in these days of increasingly assertive challenges to Darwinism the question becomes acute is our perception of design simply a mental figment or is there something deeper at work Physiologist Scott Turner argues that the apparent design of the living world can be accounted for scientifically But to do it we must consider a dimension that modern molecular biology often ignores the dynamic interaction between living organisms and their environment By combining environmental physiology and natural selection we begin to understand the beautiful fit between the form life takes and how life works In *The Tinkerer's Accomplice* Scott Turner takes up the question of design as a very real problem in biology his solution poses challenges to all sides in this critical debate

The Sentient Cell Arthur S. Reber, Frantisek Baluska, William Miller, 2023-09-08 All species extant and extinct from the simplest unicellular prokaryotes to humans have an existential consciousness Without sentience the first cells that emerged some 4 billion years ago would have been evolutionary dead ends unable to survive in the chaotic dangerous environment in which life first appeared and evolved In this book Arthur Reber's theory the Cellular Basis of Consciousness CBC is outlined and distinguished from those models that argue that minds could be instantiated on artificial entities and those that maintain consciousness requires a nervous system The CBC framework takes a novel approach to classic topics such as the origin of life philosophy of mind the role of genes the impact of cognition and how biological information is processed by all species It also calls for a rethinking of a variety of issues including the moral implications of the sentient capacities of all species how welfare concerns need to be expanded beyond where they currently are and critically how all life is intertwined in a coordinated cognitive ecology *The Sentient Cell* explores this revolutionary model which updates the standard neo Darwinian framework within which current approaches operate and examines the underlying biomolecular features that are the likely candidates for the invention of consciousness and outline their role in cellular life

Essential Readings in Biosemiotics Donald Favareau, 2010-06-10 Synthesizing the findings from a wide range of disciplines from biology and anthropology to philosophy and linguistics the emerging field of Biosemiotics explores the highly complex phenomenon of sign processing in living systems Seeking to advance a naturalistic understanding of the evolution and development of sign dependent life processes contemporary biosemiotic theory offers important new conceptual tools for the scientific understanding of mind and meaning for the development of artificial intelligence and for the ongoing research into the rich diversity of non verbal human animal and biological communication processes Donald Favareau's *Essential Readings in Biosemiotics* has been designed as a single source overview of the major works informing this new interdisciplinary and provides scholarly historical and analytical commentary on each of the texts presented The first of its kind this book constitutes a valuable resource to both bioscientists and to semioticians interested in this emerging new discipline and can function as a primary textbook for students in biosemiotics as well Moreover because of

its inherently interdisciplinary nature and its focus on the big questions of cognition meaning and evolutionary biology this volume should be of interest to anyone working in the fields of cognitive science theoretical biology philosophy of mind evolutionary psychology communication studies or the history and philosophy of science Introduction to Biosemiotics Marcello Barbieri, 2007-05-10 Combining research approaches from biology philosophy and linguistics the field of Biosemiotics proposes that animals plants and single cells all engage in semiosis the conversion of objective signals into conventional signs This has important implications and applications for issues ranging from natural selection to animal behavior and human psychology leaving biosemiotics at the cutting edge of the research on the fundamentals of life Drawing on an international expertise the book details the history and study of biosemiotics and provides a state of the art summary of the current work in this new field And with relevance to a wide range of disciplines from linguistics and semiotics to evolutionary phenomena and the philosophy of biology the book provides an important text for both students and established researchers while marking a vital step in the evolution of a new biological paradigm *The Routledge Companion to Semiotics* Paul Copley, 2009-09-11 The ideal introduction to semiotics containing engaging essays from an impressive range of international leaders in the field Featuring an extended glossary of key terms and thinkers as well as suggestions for further reading this is an invaluable reference guide for students of semiotics at all levels **Concepts in Cell Biology - History and Evolution** Vaidurya Pratap Sahi, František Baluška, 2018-03-01 This book discusses central concepts and theories in cell biology from the ancient past to the 21st century based on the premise that understanding the works of scientists like Hooke Hofmeister Caspary Strasburger Sachs Schleiden Schwann Mendel Nemec McClintock etc in the context of the latest advances in plant cell biology will help provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and Indian cultures Since the term cell was first coined by Robert Hooke 350 years ago in *Micrographia* the study of plant cell biology has moved ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy has been a vital source for piquing scientists interest in the biology of the cell Today with the technical advances we have made in the field of optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his inadvertent discovery of the cell wall we have since moved forward to engineering plants with modified cell walls Studies on the chloroplast have also gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver higher crop yields Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast once studied by Sachs or actin observed by Bohumil Nemec If physics in the form of cell biology has been responsible for one half of this historical development biochemistry has surely been the other

Organismal Agency Jana Švorcová, 2024-05-09 This book explores the notion of organismal agency from the perspective of both philosophy and biology The two sections of the book delve into parallel themes including distinctions between organic and inorganic nature self organization autonomy self presentation memory umwelt and environmental influence The

philosophical part focuses on the influential thinkers who shaped our perception of living entities beyond mere mechanisms. It scrutinizes the concepts of organism and nature in the works of Aristotle, Kant, Schelling, and various processualists. Each chapter explores facets of their ideas that directly or indirectly foreshadowed or contributed to the formulation of the concept of agency. The biological part of the book investigates various concepts associated with agency such as experience, meaning, attribution, and phenotypic plasticity, as well as reproduction, organisational constraints, modularity, development of integrated phenotypes, organismal choices, or self-representation through animal organisation. In essence, this work offers a comprehensive examination of organismal agency and its philosophical and biological foundations. Collaboratively authored by individuals from several institutions, this publication caters primarily to researchers and students working at the intersection of philosophy and biology.

Evolution in Four Dimensions, revised edition Eva Jablonka, Marion J. Lamb, 2014-03-21. A pioneering proposal for a pluralistic extension of evolutionary theory, now updated to reflect the most recent research. This new edition of the widely read *Evolution in Four Dimensions* has been revised to reflect the state of new discoveries in biology since the book was first published in 2005, offering corrections, an updated bibliography, and a substantial new chapter. Eva Jablonka and Marion Lamb's pioneering argument proposes that there is more to heredity than genes. They describe four dimensions in heredity: four inheritance systems that play a role in evolution: genetic, epigenetic, or non-DNA cellular transmission of traits, behavioral, and symbolic transmission through language and other forms of symbolic communication. These systems, they argue, can all provide variations on which natural selection can act. Jablonka and Lamb present a richer, more complex view of evolution than that offered by the gene-based Modern Synthesis, arguing that induced and acquired changes also play a role. Their lucid and accessible text is accompanied by artist-physician Anna Zeligowski's lively drawings, which humorously and effectively illustrate the authors' points. Each chapter ends with a dialogue in which the authors refine their arguments against the vigorous skepticism of the fictional I.M. for Ipcha Mistabra Aramaic for the opposite conjecture. The extensive new chapter, presented engagingly as a dialogue with I.M., updates the information on each of the four dimensions, with special attention to the epigenetic, where there has been an explosion of new research. Praise for the first edition: With courage and verve and in a style accessible to general readers, Jablonka and Lamb lay out some of the exciting new pathways of Darwinian evolution that have been uncovered by contemporary research. Evelyn Fox Keller, MIT author of *Making Sense of Life: Explaining Biological Development with Models, Metaphors, and Machines*. In their beautifully written and impressively argued new book, Jablonka and Lamb show that the evidence from more than fifty years of molecular, behavioral, and linguistic studies forces us to reevaluate our inherited understanding of evolution. Oren Harman, *The New Republic*. It is not only an enjoyable read, replete with ideas and facts of interest, but it does the most valuable thing a book can do: it makes you think and reexamine your premises and long-held conclusions. Adam Wilkins, *BioEssays*.

Investigations of Explanatory Strategies in Linguistics Lukáš Zámečník, 2023-07-24. Linguistic theories often suffer

from the dilemma that their explanatory power is based on extra linguistic assumptions The book delineates the essence of linguistic theory and linguistic explanation and in doing so proposes a solution to the dilemma Simultaneously the book is one of the first attempts to profile the philosophy of linguistics as a distinct sub discipline of the contemporary philosophy of science

God and the World of Signs Andrew Robinson,2010-09-24 Drawing on the philosophy of C S Peirce Robinson develops a semiotic model of the Trinity and proposes a new theology of nature according to which the evolving cosmos may be understood as bearing vestiges of the Trinity in creation

The Reception of Charles Darwin in Europe Eve-Marie Engels,2008 Beyond this pivotal place in the history of scientific thought Charles Darwin s writings and his theory of evolution by natural selection have also had a profound impact on art and culture and continue to do so to this day This book is a comprehensive survey of this enduring cultural impact throughout the continent With chapters written by leading international scholars that explore how literary writers and popular culture responded to Darwin s thought the book also includes a complete timeline of his cultural reception in Europe and bibliographies of major translations in each country

Deleuzian Intersections Casper Bruun Jensen,Kjetil Rødje,2010 Science and technology studies cultural anthropology and cultural studies deal with the complex relations between material symbolic technical and political practices In a Deleuzian approach these relations are seen as produced in heterogeneous assemblages moving across distinctions such as the human and non human or the material and ideal This volume outlines a Deleuzian approach to analyzing science culture and politics

Towards A Semiotic Biology: Life Is The Action Of Signs Kalevi Kull,Claus Emmeche,2011-06-08 This book presents programmatic texts on biosemiotics written collectively by world leading scholars in the field Deacon Emmeche Favareau Hoffmeyer Kull Marko Pattee Stjernfelt In addition the book includes chapters which focus closely on semiotic case studies Bruni Kotov Maran Neuman Turovski According to the central thesis of biosemiotics sign processes characterise all living systems and the very nature of life and their diverse phenomena can be best explained via the dynamics and typology of sign relations The authors are therefore presenting a deeper view on biological evolution intentionality of organisms the role of communication in the living world and the nature of sign systems all topics which are described in this volume This has important consequences on the methodology and epistemology of biology and study of life phenomena in general which the authors aim to help the reader better understand

Adolf Portmann Filip Jaroš,Jiří Klouda,2021-09-07 This edited volume is the first specialized book in English about the Swiss zoologist and anthropologist Adolf Portmann 1897 1982 It provides a clarification and update of Portmann s theoretical approach to the phenomenon of life characterized by terms such as inwardness and self presentation Portmann s concepts of secondary altriciality and the social uterus have become foundational in philosophical anthropology providing a benchmark of the difference between humans and animals In its content this book brings together two approaches historical and philosophical analysis of Portmann s studies in the life sciences and application of Portmann s thought in the fields of biology anthropology and biosemiotics Significant attention is

also paid to the methodological implications of his intended reform of biology Besides contributions from contemporary biologists philosophers and historians of science this volume also includes a translation of an original essay by Portmann and a previously unpublished manuscript from his most remarkable English speaking interpreter philosopher Marjorie Grene Portmann's conception of life is unique in its focus on the phenomenal appearance of organisms Confronted with the enormous amount of scientific knowledge being produced today it is even clearer than it was during Portmann's lifetime that although biologists employ physical and chemical methods biology itself is not only physics and chemistry These exact methods must be applied according to what has meaning for living beings If biology seeks to understand organisms as autonomous agents it needs to take display and the interpretation of appearances as basic characteristics of life The topic of this book is significantly relevant to the disciplines of theoretical biology philosophy philosophical anthropology and biosemiotics The recent epigenetic turn in biology acknowledging the interconnections between organismal development morphology and communication presents an opportunity to revisit Portmann's work and to reconsider and update his primary ideas in the contemporary context Interpreting Nature Brian Treanor, Martin Drenthen, David Utsler, 2013-11-11 Modern environmentalism has come to realize that many of its key concerns wilderness and nature among them are contested territory viewed differently by different people Understanding nature requires science and ecology to be sure but it also requires a sensitivity to history culture and narrative Thus understanding nature is a fundamentally hermeneutic task

Network Nature Richard Coyne, 2018-04-05 How do people avoid the stresses of the digital age Urban dwellers must now turn to nature to recover restore and rebalance after the stresses brought on by relentless digital connectivity It is easy to task nature as the cure with technology as the ailment In *Network Nature* Richard Coyne challenges the definitions of both the natural and the artificial that support this time worn narrative of nature's benefits In the process he attacks the counter claim that nature must succumb to the sovereignty of digital data Covering a spectrum of issues and concepts from big data and biohacking to animality numinous spaces and the post digital he draws on the rich field of semiotics as applied to natural systems and human communication to enhance our understanding of place landscape and architecture in a digital world
