Reading Disabilities Genetic And Neurological Influences:

Reading Disabilities B. Pennington, 2012-12-06 This book is unique in that it brings together in one place an account of recent advances in our understanding of the biology of dyslexia. It grew out of a Rodin Remediation Foundation International conference held on this topic in Boulder Colorado in 1990 which included most of the world's experts on the genetics and neurology of dyslexia. Ten years ago a volume on this topic would scarcely have been possible and now we have an emerging comprehensive neuroscientific understanding of this complex behavioral disorder that goes from genes to brain to behavior. Building on recent advances in the understanding of the cognitive phenotype of dyslexia, these authors present new data on both the etiology and brain mechanisms underlying that phenotype. Reading disability or dyslexia has a high familial recurrence rate and is partly heritable. Genetic linkage studies are beginning to identify the possible locations of genes influencing this phenotype. On the neurological side, several independent studies have found neuroanatomical differences in the dyslexic brain which are due to early changes in brain development. Thus, contrary to the views held by some educators that dyslexia is a myth, the results presented in this book firmly establish dyslexia as a real biological condition. This book is relevant to researchers and practitioners concerned with both normal and abnormal reading development. *Neural*

Development and Schizophrenia Sarnoff A. Mednick, J. Meggin Hollister, 2012-12-06 This is the third meeting we have organized which has explored the meaning of fetal neural developmental disruption in the etiology of schizophrenia. The first was sponsored by the Schizophrenia Research Branch with the scientific cooperation of Dr David Shore. We met in Washington; the output of the meeting was published in a book entitled *Fetal Neural Development and Adult Schizophrenia* Cambridge University Press 1991. The next meeting was an Advanced Research Workshop sponsored by NATO and was held at Ciocco Castelveccchio, Pascoli. This meeting was reported in a NATO volume *Developmental Neuropathology of Schizophrenia* and was edited by Mednick, Cannon, Barr, and La Fosse. The current meeting has noted several advances in the field. There are additional psychiatric illnesses which have been found to be related to maternal viral infection in the second trimester. There have been studies reported which have definitely observed a viral infection in the mothers of fetuses who later evidenced schizophrenia. More evidence has been published which has replicated the second trimester effect. In the future, studies will be wise to provide serological evidence of a viral infection and information on the precise viruses involved. Another important step will be to determine whether second trimester maternal viral infection is related to a behavioral deficit in the infant. If neural development has been compromised, it might be possible to detect deficits in the infant with the proper measures. We look forward to future meetings at which these new areas might be explored. *Toward A Genetics of Language* Mabel L. Rice, 2013-02-01 The past decade has brought important new advances in the fields of genetics, behavioral genetics, linguistics, language acquisition, studies of language impairment, and brain imaging. Although these advances are each highly relevant to the determination of what a child is innately prepared to bring to language acquisition, the

contributing fields of endeavor have traditionally been relatively self contained with little cross communication This volume was developed with the belief that there is considerable value to be gained in the creation of a shared platform for a dialogue across the disciplines Leading experts in genetics linguistics language acquisition language impairment and brain imaging are brought together for the purpose of exploring the current evidence theoretical issues and research challenges in a way that bridges disciplinary boundaries and points toward future developments in the search for the genetic and environmental bases of language acquisition and impairments This collection provides discussions and summaries of breakthrough findings of the genetic underpinnings of dyslexia theoretical and empirical developments in the specification of a phenotype of language acquisition and impairment evidence of familiarity and twin concordances of specific language impairment and new evidence from brain imaging It concludes with a critical response from an advocate of rational empiricism **Behavioural**

Psychology of Reading Keith Rayner, Alexander Pollatsek, Jane Ashby, Charles Clifton Jr., 2012-05-22 Reading is a highly complex skill that is prerequisite to success in many societies in which a great deal of information is communicated in written form. Since the 1970s much has been learned about the reading process from research by cognitive psychologists. This book summarizes that important work and puts it into a coherent framework. The book's central theme is how readers go about extracting information from the printed page and comprehending the text. Like its predecessor, this thoroughly updated 2nd Edition encompasses all aspects of the psychology of reading with chapters on writing systems, word recognition, the work of the eyes during reading, inner speech, sentence processing, discourse processing, learning to read, dyslexia, individual differences, and speed reading. *Psychology of Reading* 2nd Edition is essential reading for undergraduates, graduates, and researchers in cognitive psychology and could be used as a core textbook on courses on the psychology of reading and related topics. In addition, the clear writing style makes the book accessible to people without a background in psychology but who have a personal or professional interest in the process of reading.

Cross-Linguistic Study of Acquired Reading Disorders Prathibha Karanth, 2003-12-31 This volume focuses on cross-linguistic studies of the acquired disorders of reading and what they can tell us about the models of reading and the human brain. The author has compiled a source book on cross-linguistic studies of reading disorders with data from the alphasyllabaries of India in addition to showing the implications of these findings on the understanding of reading, its acquisition, and the developmental and acquired reading disorders and their management.

Cognitive Processing of the Chinese and the Japanese Languages C.K. Leong, Katsuo Tamaoka, 2013-03-09 The area of cognitive processing of Chinese and Japanese is currently attracting a great deal of attention by leading cognitive psychologists. They aim to find out the similarities and differences in processing the morphosyllabic Chinese and Japanese syllabary as compared with alphabetic language systems. Topics under the processing of Chinese include the use of phonological codes in visual identification of Chinese words, the constraint on such phonological activation, recognition of Chinese homophones, Chinese sentence comprehension, and children's errors in writing Chinese characters. Topics under the processing of Japanese include the automatic recognition of kanji within an interactive activation framework, on reading and kun reading of kanji characters, processing differences between hiragana and kanji, the effect of polysemy on katakana script, and the writing behavior of Japanese and non-Japanese speakers. The interactive activation model provides the phonologic-orthographic links in processing both language systems. The present volume should add greatly to our understanding of this topic. Many of the contributors are internationally known for their experimental psychological work.

Students with Both Gifts and Learning Disabilities Tina A. Newman, Robert J. Sternberg, 2012-12-06 We were motivated to edit this book when we began to hear stories of exceptional students who were struggling with reading writing or math but who could solve seemingly any problem with computers or build the most intricate structures with Legos or could draw beautiful pictures or could tell the most creative stories but ended up in tears when asked to write it out How is it possible to have so much talent in some areas and yet to appear to have a disability in another What resources are available for these students How can we ensure that

these students abilities are nurtured and developed Our goal in this book is to provide ideas and possibly even tentative answers for educators and to stimulate more questions to be answered by researchers We have ourselves been addressing related questions for some time Our group at the PACE Center at Yale has explored the development of abilities competencies and expertise that allow people to be successful in life Through this work we have collaborated with school districts and other educators and researchers across the country to expand the notion of what is traditionally thought of as intelligence We use the concept of successful intelligence to allow for the possibility that the skills traditionally taught in school are not the only ones and often not even the most important ones that allow people to be successful in the world
