Noah's Ravens James O. Farlow, 2018-10-08 How can the tracks of dinosaurs best be interpreted and used to reconstruct them In many Mesozoic sedimentary rock formations fossilized footprints of bipedal three toed tridactyl dinosaurs are preserved in huge numbers often with few or no skeletons Such tracks sometimes provide the only clues to the former presence of dinosaurs but their interpretation can be challenging How different in size and shape can footprints be and yet have been made by the same kind of dinosaur How similar can they be and yet have been made by different kinds of dinosaurs To what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers Profusely illustrated and meticulously researched Noah's Ravens quantitatively explores a variety of approaches to interpreting the tracks carefully examining within species and across species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives The results help decipher one of the world's most important assemblages of fossil dinosaur tracks found in sedimentary rocks deposited in ancient rift valleys of eastern North America Those often beautifully preserved tracks were among the first studied by paleontologists and they were initially interpreted as having been made by big birds one of which was jokingly identified as Noah's legendary raven

Australia's Fossil Heritage, The Australian Heritage Council, 2012-07-18 The National Heritage List was created in January 2004 to recognise celebrate and protect places of outstanding heritage value to the nation National heritage encompasses those places that reveal the richness of Australia's extraordinarily diverse natural historic and Indigenous heritage One aspect of natural heritage that has been little explored is Australia's wealth of exceptional fossil sites While a small number of fossil sites have risen to public prominence there are many lesser known sites that have important heritage values The Australian Heritage Council engaged palaeontologists from

state museums and the Northern Territory Museum and Art Gallery to compile lists of outstanding fossil sites and to document their characteristics and relative importance against a range of categories with a view to further our understanding about Australia's important fossil heritage Sites that were listed for National or World Heritage values were not included in the places for consideration with the focus being on lesser known but still important sites This book is an account of the palaeontologists findings Some of the sites that were included in the initial lists have since been recognised through listing on the National Heritage List or the World Heritage List Australia's Fossil Heritage provides a useful reference to the outstanding fossil sites it catalogues and gives a clearer understanding of the heritage values of such sites More generally it contributes to a greater appreciation of Australia's geological and fossil diversity and enables readers to learn more about Australia's prehistory
