Oncogenic Viruses:

Human Oncogenic Viruses Jing-hsiung James Ou, 2010 Viruses are the causes of approximately 25% of human cancers. Due to their importance in carcinogenesis, there is a desperate need for a book that discusses these viruses. This book is therefore timely, providing a comprehensive review of the molecular biology of oncogenic viruses and the cancers they cause. Viruses that are discussed in the individual chapters include hepatitis B virus, hepatitis C virus, human papilloma viruses, Epstein-Barr virus, Kaposi's sarcoma virus, and human T cell leukemia virus type 1. This book provides up-to-date information for graduate students, postdoctoral fellows, medical students, physicians, and non-experts who are interested in learning more about the oncogenic viruses and how they cause human cancers. Oncogenic Viruses Volume 1 Moulay Mustapha Ennaji, 2022-09-14 *Oncogenic Viruses: Fundamentals of Oncoviruses* provides an overview of the history of human oncoviruses, how to discover and define an oncovirus, how viruses cause cancer in general, their oncogenic mechanisms, and epidemiology, and the cancer biology of oncoviruses. The book is organized into five main parts that include history and discovery of virus, tumor complications, taxonomy and classification of oncoviruses, oncoviruses around the world, including epidemiology, statistics, and current methods. Finally, the book looks at the molecular epidemiology of DNA and RNA viruses and their role in the pathogenesis of human cancers. Provides an overview of the history, discovery, taxonomy, and biology of oncoviruses. Offers the fundamentals of viral implications in human tumors. Covers the molecular epidemiology and oncologic implications and associations of DNA and RNA oncoviruses. [Viruses and Human Cancer](#) T.-C. Wu, Mei-Hwei Chang, Kuan-Teh Jeang, 2020-11-17 This book, in a new extensively updated edition, covers viral infection, virus-induced inflammation and tissue injuries, viral epidemiology, oncogenic mechanisms, and current and emerging preventive and therapeutic strategies in detail. Readers will also find information on the individual aspects of a number of oncogenic viruses, including hepatitis B, hepatitis C, human papillomavirus, Epstein-Barr virus, human T cell lymphotropic virus, Kaposi sarcoma-associated herpes, and Merkel cell polyomavirus, as well as associated human cancers. The book will benefit all those who are seeking a comprehensive up-to-date overview of the basic and clinical aspects of oncogenic viruses and associated human cancers. Following its original publication in 2014, the first edition of this book quickly became an influential text in the field. This second edition duly reflects the significant advances in knowledge and

Oncogenic Viruses Medical Applications of Viral Oncology Research Volume Two builds on the introductory overview of Volume One Oncogenic Viruses Fundamentals of Oncogenic Viruses It looks at recent advances and medical application of research studies on oncoviruses including examining oncoviruses on a molecular level covers diagnostic and prognostic viral biomarkers and identifying biomarkers in specific human cancers and delves into prevention treatment and the future of cancer therapy of oncoviruses antiviral activities and vaccination strategies Advanced topics and the future direction of oncovirology round out the book This book is a comprehensive reference for researchers and practitioners engaged in learning more about the role of oncogenic viruses in the pathogenesis of human cancers and how that information can be applied to identify strategies for prevention and treatment Explores the biology of oncoviruses and mechanisms of action on a cellular level Examines recent advances in oncoviruses prevention and curative treatments Discusses the use of modeling and bioinformatics in research studies on oncoviruses

The Human Oncogenic Viruses Albert A. Luderer, Howard H. Weetall, 2012-12-06 The early organ specific diagnosis of malignancy continues to be a major unmet medical need Clearly the ability to establish an early diagnosis of cancer is dependent upon an intimate knowledge of the cancer's biology which if understood at the molecular level should identify key diagnostic and therapeutic manipulation points Advances in recombinant gene technology have provided significant understanding of the mechanisms of action of oncogenic viruses as well as of cancer associated genomic sequences onco genes This text will explore the known molecular genetic biological and clinical knowledge of selected human neoplasms that demonstrate association with suspected oncogenic virus and those cytogenetic alterations that either cause or are caused by oncogene activation The text first reviews the cytogenetics of human cancers linking classical cytogenetics and molecular genetics Avery A Sandberg Roswell Park Memorial Institute Buffalo New York reviews the leukemias and lymphomas followed by S Pathak M D Anderson Hospital and Tumor Institute Houston Texas who reviews solid tumors Functional consideration of oncogenes is highlighted by Keith C Robbins and Stuart A Aaronson NO Bethesda Maryland through their description of the *v sis* locus *sis* and its gene product p 28 a protein that closely resembles human platelet derived growth factor PDGF

Investigation of Oncogenic Viruses

George J. Todaro,1974 **DNA Tumor Viruses** Giuseppe Barbanti-Brodano, Mauro Bendinelli, Herman Friedman, 2013-11-21 DNA tumor viruses have long been useful experimental models of carcinogenesis and have elucidated several important mechanisms of cell transformation. Research in recent years has shown that human tumors have a multifactorial nature and that some DNA tumor viruses may play a key role in their etiology. The aim of this book is to assess our knowledge of DNA tumor viruses by reviewing animal models, mechanisms of transformation, association with human tumors, and possibilities of prevention and control by vaccination. Animal models of tumor virology have contributed significantly to our understanding of the epidemiology and pathogenesis of virus-induced tumors. Bovine papillomaviruses induce papillomas in the intestine of cattle. The papillomas undergo a transition to carcinomas in cows feeding on bracken fern which produces a toxin with radiomimetic and immunosuppressive functions. This example of cooperation between a virus and chemical carcinogens parallels the cooperative role of human papillomaviruses (HPVs) and herpes simplex virus type 2 (HSV 2) with environmental carcinogens in the pathogenesis of cervical cancer. Likewise, hepatocarcinomas appearing in woodchucks chronically infected by woodchuck hepatitis virus (WHV) provide strong support for the relationship between hepatitis B virus (HBV) infection and human hepatocellular carcinoma. Also, the fact that WHV DNA integrates closely to cellular oncogenes suggests a possible molecular mechanism for the tumorigenesis induced by HBV. *Oncogenic Viruses* Ludwik Gross, 1983 **Cancer Associated Viruses** Erle S. Robertson, 2011-12-19 The acknowledgment that viruses are potent biological factors in driving many cancers has seen a dramatic upsurge in recent years in large part to the success of the human papilloma virus vaccine against invasive cervical carcinomas and followed by the awarding of the noble prize in medicine in 2008 to Dr Harald zur Hausen who identified the link between papilloma virus and cervical cancers. Over the last few years there have been some volumes addressing different aspects of viruses and cancers and to some extent focusing on the DNA viruses more specifically the human DNA viruses. This proposed volume will attempt to review and address the major gaps in current knowledge in DNA viruses as well as RNA viruses bringing a historical perspective of where studies began to a more recent molecular approach and vaccine successes in tumor viruses. We will also cover other known oncogenic viruses associated cancers in other mammals in addition to humans. Viruses, Evolution and Cancer Basic Considerations Edouard Kurstak, 2012-12-02 *Viruses Evolution and Cancer Basic Considerations* focuses on comparative biology and evolutionary aspects of DNA and RNA oncogenic viruses. Organized into seven parts, this book begins with a discussion on the host cell virus relationships. Some chapters follow that discuss the comparative aspects of DNA and RNA oncogenic viruses. This work also elucidates the effects of oncogenic viruses on cell surface metabolism. Other chapters explore the comparative viral oncology, comparative immunology of oncogenic viruses, and evolution of viruses. This book will be an invaluable material both to those concerned in the scientific and medical problems of cancer and will benefit all who are interested in virology and oncology. **The Biology of Oncogenic Viruses** Luigi G. Clinical oncologists and researchers now have a comprehensive single source of current information on cancer viruses obtained from bench and bedside. This important reference allows further development of translational approaches for the effective treatment of patients with virus-associated malignancies. The book contains 25 chapters covering basic and clinical aspects of viruses including HPV, HBV, HCV, polyomaviruses, Kaposi's associated viruses, retroviruses including HIV-1 associated malignancies and EBV. Several chapters are devoted to basic science of oncogenic viruses for the study of their pathogenesis, drug development and employment of viral vectors for vaccine and gene therapy. Clinical materials are embedded within chapters and there are also complementary clinically based chapters describing natural courses and treatments.

It has long been suspected and recently confirmed that there is an etiologic relationship between several viruses and naturally occurring neoplasias. Virus precursors in the form of nucleic acids or antigens have consistently been associated with certain neoplasias. However, the role of these virus-specified precursors in etiology remains obscure. Recent studies of virus-associated neoplasias have led to advances in molecular techniques which have yielded increasingly sensitive assays for detection of virus-specific nucleic acids and which have enabled the disruption of virus particles without concomitant loss in antigenicity of the components. These procedures have in turn resulted in molecular probes that allow more definitive evaluation of the host response to its virus and to the tumor cell with which the virus or its precursors are associated. Evaluations of the immune response and status of the host have provided important information about carcinogenesis and the tools for seroepidemiological studies of a variety of cancers. These seroepidemiological studies have demonstrated that several human cancers, e.g., Burkitt's lymphoma and nasopharyngeal carcinoma, are probably virus-induced and that antibodies that are diagnostic and prognostic for these diseases are detectable. The conclusion that feline leukemia is a disease transmitted horizontally by a virus resulted primarily from immunological experiments.
