Structural Transformation and Sustainable Development in the Global South Seung Jin Baek, 2021-12-24 This book investigates the relationship between sustainable development and structural transformation within international development policy On the one hand sustainable development is promoted as a multi dimensional concept for achieving environmentally and socially responsible change On the other hand structural transformation refers to a sustained period of growth in living standards and incomes that brings sectoral change For some these two objectives seem at odds with each other but this book argues that incorporating environmental initiatives into structural transformation goals in lower income countries actually results in better results than strategies prioritising economic growth Drawing on extensive structural equation modelling and original analysis the book presents an innovative inclusive sustainable development framework to demonstrate the benefits of a more integrated approach to development planning aiming for structural transformation in line with inclusive sustainable development principles This book will be of interest to students and researchers of global development and to policymakers within government and development organizations
