Smith, 2011-01-01 Leading scholars in the field of law and economics contribute their original theoretical and empirical research to this major Handbook Each chapter analyzes the basic architecture and important features of the institutions of property law from an economic point of view while also providing an introduction to the issues and literature Property rights and property systems vary along a large number of dimensions and economics has proven very conducive to analyzing these patterns and even the nature of property itself The contributions found here lend fresh perspectives to the current body of literature examining topics including initial acquisition the commons anticommons and semicommons intellectual property public rights abandonment and destruction standardization of property property and firms marital property bankruptcy as property titling systems land surveying covenants nuisance the political economy of property and takings The contributors employ a variety of methods and perspectives demonstrating the fruitfulness of economic modeling empirical methods and institutional analysis for the study of both new and familiar problems in property Legal scholars economists and other social scientists interested in property will find this Handbook an often referenced addition to their libraries **The Making of America's Culture Regions** Richard L. Nostrand, 2018-01-19 This outstanding text provides students with the essential foundation in the historical geography of the United States Distinguished scholar Richard L Nostrand skillfully synthesizes decades of historical geography research in an engaging and thought provoking overview His regional geography framework emphasizes the three themes central to cultural geography cultural ecology cultural diffusion and cultural landscape to explain the formation and change of culture regions in the United States He shows convincingly that regions are a valuable pedagogical device for developing students understanding of place and context **The Geometry of Urban Layouts** Mahbub Rashid, 2016-06-16 This book presents a compendium of the urban layout maps of 2 mile square downtown areas of more than one hundred cities in developed and developing countries all drawn at the same scale using high resolution satellite images of Google Maps The book also presents analytic studies using metric geometrical topological or network and fractal measures of these maps These analytic studies identify ordinaries extremes similarities and differences in these maps

investigate the scaling properties of these maps and develop precise descriptive categories types and indicators for multidimensional comparative studies of these maps The findings of these studies indicate that many geometric relations of the urban layouts of downtown areas follow regular patterns that despite social economic and cultural differences among cities the geometric measures of downtown areas in cities of developed and developing countries do not show significant differences and that the geometric possibilities of urban layouts are vastly greater than those that have been realized so far in our cities

A Guide to Information Sources in the Geographical Sciences Stephen Goddard,1983-01-01 Geography is a wide ranging discipline and the number of information sources available is truly enormous These include printed books and journal articles maps satellite photographs archives statistical information and much else One particular problem facing geographers is that when one studies a foreign country information may be available only in the foreign country and difficult to obtain This book discusses the information sources available to geographers

The Forgotten Frontier John William Reps,1981 Americans imagine the Early West as a vast expanse of almost empty land populated only by farmers ranchers cattle and horses Now a leading scholar challenges this stereotype with his concise examination of early city planning and urban development in the region Extending and elaborating on studies by Carl Bridenbaugh and Richard Wade of the Atlantic Seaboard and the Ohio Valley John Reps demonstrates that throughout the Trans Mississippi West cities and towns not farms and ranches formed the vanguard of frontier settlement Urban communities thus stimulated rather than followed the opening of the West to agriculture These cities did not grow randomly for their founders established patterns of streets lots and public sites to guide expansion as population increased Reps supports his thesis with 100 illustrations plans maps surveys and views showing the original designs of every major Western city and of dozens of smaller places Based on Reps s massive *Cities of the American West* winner of the Beveridge Prize in 1980 this succinct account includes extensive notes and references that will be useful to readers who wish to pursue his penetrating critique

The Delaware Valley in the Early Republic Gabrielle M. Lanier,2005-01-18 Gabrielle M Lanier challenges prevailing characterizations of the region as culturally monolithic and reassesses its role in the formation of a distinctly American identity through the history geography and architecture of three of the valley s diverse cultural landscapes Through narratives of individual lives aggregate data from tax rolls and censuses archival research and close analysis of the built vernacular environment Lanier examines the unique ethnic class and religious constitution of each subregion as well as its racial diversity political orientation economic organization and cultural imprint on the landscape Jacket
