Pattern Recognition International Conference On 10th Icpr Vol 1:

Pattern Recognition, International Conference on (10th ICPR). Vol. 1 Institute of Electrical and Electronics Engineers, Inc. Staff,1990 Design for Embedded Image Processing on FPGAs Donald G. Bailey,2011-06-13 Dr Donald Bailey starts with introductory material considering the problem of embedded image processing and how some of the issues may be solved using parallel hardware solutions Field programmable gate arrays FPGAs are introduced as a technology that provides flexible fine grained hardware that can readily exploit parallelism within many image processing algorithms A brief review of FPGA programming languages provides the link between a software mindset normally associated with image processing algorithms and the hardware mindset required for efficient utilization of a parallel hardware design The design process for implementing an image processing algorithm on an FPGA is compared with that for a conventional software implementation with the key differences highlighted Particular attention is given to the techniques for mapping an algorithm onto an FPGA implementation considering timing memory bandwidth and resource constraints and efficient hardware computational techniques Extensive coverage is given of a range of low and intermediate level image processing operations discussing efficient implementations and how these may vary according to the application The techniques are illustrated with several example applications or case studies from projects or applications he has been involved with Issues such as interfacing between the FPGA and peripheral devices are covered briefly as is designing the system in such a way that it can be more readily debugged and tuned Provides a bridge between algorithms and hardware Demonstrates how to avoid many of the potential pitfalls Offers practical recommendations and solutions Illustrates several real world applications and case studies Allows those with software backgrounds to understand efficient hardware implementation Design for Embedded Image Processing on FPGAs is ideal for researchers and engineers in the vision or image processing industry who are looking at smart sensors machine vision and robotic vision as well as FPGA developers and application engineers The book can also be used by graduate students studying imaging systems computer engineering digital design circuit design or computer science It can also be used as supplementary text for courses in advanced digital design algorithm and hardware implementation and digital signal processing and applications Companion website for the book www.wiley.com/go/bailey/fpga

Biomedical Image Segmentation Ayman El-Baz,Xiaoyi Jiang,Jasjit S. Suri,2016-11-17 As one of the most important tasks in biomedical imaging image segmentation provides the foundation for quantitative reasoning and diagnostic techniques A large variety of different imaging techniques each with its own physical principle and characteristics e g noise modeling often requires modality specific algorithmic treatment In recent years substantial progress has been made to biomedical image segmentation Biomedical image segmentation is characterized by several specific factors This book presents an overview of the advanced segmentation algorithms and their applications **Wide Area Surveillance** Vijayan K. Asari,2013-11-19 The book describes a system for visual surveillance using intelligent cameras The camera uses robust techniques for detecting

and tracking moving objects The real time capture of the objects is then stored in the database The tracking data stored in the database is analysed to study the camera view detect and track objects and study object behavior These set of models provide a robust framework for coordinating the tracking of objects between overlapping and non overlapping cameras and recording the activity of objects detected by the system
