Patterns, Thinking, and Cognition Howard Margolis, 1987 What happens when we think How do people make judgments While different theories abound and are heatedly debated most are based on an algorithmic model of how the brain works Howard Margolis builds a fascinating case for a theory that thinking is based on recognizing patterns and that this process is intrinsically a logical Margolis gives a Darwinian account of how pattern recognition evolved to reach human cognitive abilities Illusions of judgment standard anomalies where people consistently misjudge or misperceive what is logically implied or really present are often used in cognitive science to explore the workings of the cognitive process The explanations given for these anomalous results have generally explained only the anomaly under study and nothing more Margolis provides a provocative and systematic analysis of these illusions which explains why such anomalies exist and recur Offering empirical applications of his theory Margolis turns to historical cases to show how an individual's cognitive repertoire the available cognitive patterns and their relation to cues changes or resists changes over time Here he focuses on the change in worldview occasioned by the Copernican discovery not only how an individual might come to see things in a radically new way but how it is possible for that new view to spread and become the dominant one A reanalysis of the trial of Galileo focuses on social cognition and its interactions with politics In challenging the prevailing paradigm for understanding how the human mind works **Patterns Thinking and Cognition** is certain to stimulate fruitful debate

Human Judgment and Social Policy Kenneth R. Hammond, 2000 With numerous examples from law medicine engineering and economics the author presents a

comprehensive examination of the underlying dynamics of judgment dramatizing its important role in the formation of social policies which affect us all *Paradigms and Barriers* Howard Margolis,1993-08-15 In *Paradigms and Barriers* Howard Margolis offers an innovative interpretation of Thomas S Kuhn s landmark idea of paradigm shifts applying insights from cognitive psychology to the history and philosophy of science Building upon the arguments in his acclaimed *Patterns Thinking and Cognition* Margolis suggests that the breaking down of particular habits of mind of critical barriers is key to understanding the processes through which one model or concept is supplanted by another Margolis focuses on those revolutionary paradigm shifts such as the switch from a Ptolemaic to a Copernican worldview where challenges to entrenched habits of mind are marked by incomprehension or indifference to a new paradigm Margolis argues that the critical problem for a revolutionary shift in thinking lies in the robustness of the habits of mind that reject the new ideas relative to the habits of mind that accept the new ideas Margolis applies his theory to famous cases in the history of science offering detailed explanations for the transition from Ptolemaic to cosmological astronomy the emergence of probability the overthrow of phlogiston and the emergence of the central role of experiment in the seventeenth century He in turn uses these historical examples to address larger issues especially the nature of belief formation and contemporary debates about the nature of science and the evolution of scientific ideas Howard Margolis is a professor in the Harris Graduate School of Public Policy Studies and in the College at the University of Chicago He is the author of *Selfishness Altruism and Rationality* and *Patterns Thinking and Cognition* both published by the University of Chicago Press *Expanding Underground - Knowledge and Passion to Make a Positive Impact on the World* Georgios Anagnostou,Andreas Benardos,Vassilis P.
