Percentage	20 – 40 %	2 – 10%
By LM	a) Nucleus : rounded with dark stained nuclei b) Cytoplasm : small amount of pale basophilic cytoplasm	a) Nucleus : less dense than lymphocytes – C-shaped b) Cytoplasm : Pale grayish blue with small pink to purple stained lysosomes granules
By EM	Free ribosomes , short microvilli more numerous on B-lymphocytes than T-lymphocytes.	Have pseudopodia : Golgi apparatus, many lysosomes & mitochondria and Contain monocytes granules.

Characteristics	1. Lymphocytes: Lymphocytes are small cells, usually 7-10 μm in diameter. They have a large, round nucleus that takes up most of the cell's volume. The cytoplasm is scanty and appears as a thin rim around the nucleus. Lymphocytes are found in all tissues and are the most common type of white blood cell.	Monocytes: Monocytes are larger than lymphocytes, usually 12-20 μm in diameter. They have a kidney-shaped or C-shaped nucleus. The cytoplasm is more abundant and contains small, dark granules called lysosomes. Monocytes are found in the blood and can migrate into tissues to become macrophages.
Functions	1. B-lymphocytes: Differentiate into antibody-producing plasma cells that produce antibodies against foreign antigens. 2. T-lymphocytes: Regulate the "cellular war" of the immune response (suppress or enhance).	1. Macrophages: Engulf and destroy foreign particles and microorganisms. 2. Dendritic cells: Present antigens to T-lymphocytes to initiate an immune response. 3. Mast cells: Release histamine and other chemicals to trigger inflammation.

Types of Lymphocytes

B-lymphocytes T-lymphocytes	Lymphocytes are divided into two main groups: B-lymphocytes and T-lymphocytes. 1. B-lymphocytes: These cells are responsible for producing antibodies that bind to and neutralize foreign antigens. 2. T-lymphocytes: These cells are involved in cell-mediated immunity and are further divided into: a. Helper T-lymphocytes (T_H): These cells release cytokines that help activate other immune cells. b. Cytotoxic T-lymphocytes (T_C): These cells kill infected cells and tumor cells. c. Regulatory T-lymphocytes (T_{reg}): These cells suppress the immune response to prevent autoimmunity.

Blood for Thought Mira Balberg, 2024-05-14 *Blood for Thought* delves into a relatively unexplored area of rabbinic literature the vast corpus of laws regulations and instructions pertaining to sacrificial rituals Mira Balberg traces and analyzes the ways in which the early rabbis interpreted and conceived of biblical sacrifices reinventing them as a site through which to negotiate intellectual cultural and religious trends and practices in their surrounding world Rather than viewing the rabbinic project as an attempt to generate a nonsacrificial version of Judaism she argues that the rabbis developed a new sacrificial Jewish tradition altogether consisting of not merely substitutes to sacrifice but elaborate practical manuals that redefined the processes themselves radically transforming the meanings of sacrifice its efficacy and its value

The Occult Significance of Blood Rudolf Steiner, 2023-01-31 Blood is a very Special Fluid Each one of you will doubtless be aware that the title of this lecture is taken from Goethe s *Faust* You all know that in this poem we are shown how Faust the representative of the highest human effort enters into a pact with the evil powers who on their side are represented in the poem by Mephistopheles the emissary of hell You will know too that Faust is to strike a bargain with Mephistopheles the deed of which must be signed with his own blood Faust in the first instance looks upon it as a jest Mephistopheles however at this juncture utters the sentence which Goethe without a doubt intended should be taken seriously Blood is a very special fluid Now with reference to this line in Goethe s *Faust* we come to a curious trait in the so called Goethe commentators You are of course aware how vast is the literature dealing with Goethe s version of the Faust Legend It is a literature of such stupendous dimensions that whole libraries might be stocked with it and naturally I cannot make it my business to expatiate on the various comments made by these interpreters of Goethe concerning this particular passage

The History of Blood Transfusion in Sub-Saharan Africa William H. Schneider,2013-07-15 This first extensive study of the practice of blood transfusion in Africa traces the history of one of the most important therapies in modern medicine from the period of colonial rule to independence and the AIDS epidemic The introduction of transfusion held great promise for improving health but like most new medical practices transfusion needed to be adapted to the needs of sub Saharan Africa for which there was no analogous treatment in traditional African medicine This otherwise beneficent medical procedure also created a royal road for microorganisms and thus played a central part in the emergence of human immune viruses in epidemic form As with more developed health care systems blood transfusion practices in sub Saharan Africa were incapable of detecting the emergence of HIV As a result given the wide use of transfusion it became an important pathway for the initial spread of AIDS Yet African health officials were not without means to understand and respond to the new danger thanks to forty years of experience and a framework of appreciating long standing health risks The response to this risk detailed in this book yields important insight into the history of epidemics and HIV AIDS Drawing on research from colonial era governments European Red Cross societies independent African governments and directly from health officers themselves this book is the only historical study of the practice of blood transfusion in Africa
