Understanding Problems of Practice

Dawn Hathaway, Priscilla Norton, 2018-03-07 Today K 12 practitioners are challenged to become educational innovators Yet little is available to the practitioner to guide their reflection about the design development and implementation of these innovations in their own practice This brief approaches such problems of practice from the perspectives of design research Although design research typically centers on the partnership between researchers and practitioners in real world settings relationships between researchers and practitioners are not always practical In this brief the authors explore how the design research process can

make the goals assumptions processes methods and outcomes of design research uniquely accessible to the practitioner In clear explicit language it introduces design research to practitioners using both expository discussions and a robust narrative case study approach that ably guides the reader through the phases of design research namely Theory to innovation to practice Understanding problems of practice Creating a design solution Assessing the design solution Evaluating learning outcomes Capturing lessons for practice Understanding Problems of Practice is a singular resource for teachers and practitioners enrolled in graduate research courses or courses on teacher leadership It also lends itself well as a supplement to professional development activities and studies at the district school and professional learning community levels *Leo Strauss and the Problem of Political Philosophy* Michael P. Zuckert, Catherine H. Zuckert, 2014-06-30 This critical study of the influential political theorist dispels popular myths and reveals the inner logic of his varied and notoriously complex writings Political theorist Leo Strauss was unexpectedly thrust into the media spotlight for his alleged influence on neoconservative politics With *The Truth about Leo Strauss* Michael and Catherine Zuckert challenged the many claims and speculations about this complex thinker Now with *Leo Strauss and the Problem of Political Philosophy* they offer a more comprehensive interpretation of Strauss's thought using the many manifestations of the problem of political philosophy as their touchstone Strauss they argue sought to restore political philosophy to its original Socratic form This is demonstrated through his critique of positivism and historicism two intellectual currents that undermined his Socratic project The authors also explore Strauss's interpretation of both ancient and modern political philosophers including Plato Aristotle Machiavelli and Locke Finally they examine Strauss's thought in the context of the twentieth century when his chief interlocutors were Schmitt Husserl Heidegger and Nietzsche *Leo Strauss and the Problem of Political Philosophy* is the most in depth treatment of this often misunderstood thinker examining his ideas across his long career It reveals Strauss's overall intellectual project to decode how ancient and modern theory attempted to solve the problem of political philosophy And it shows why Strauss considered the ancient solution both philosophically and politically superior

Intelligent Media Technology for Communicative Intelligence Leonard Bolc, Zbigniew Michalewicz, Toyooki Nishida, 2005-09-28 The 2nd Workshop on Intelligent Media Technology for Communicative Intelligence commemorating the

10th anniversary of the Polish Japanese Institute of Information Technology in Warsaw aimed to explore the current research topics in the field of intelligent media technologies for communicative intelligence. Communicative intelligence represents a new challenge towards building a superintelligence on the ubiquitous global network by accumulating a huge amount of man and knowledge resources. The term communicative intelligence reflects the view that communication is at the very core of intelligence and its creation. Communication permits novel ideas to emerge from intimate interactions by multiple agents ranging from collaboration to competition. The recent advance of information and communication technologies has established an information infrastructure that allows humans and artifacts to communicate with each other beyond space and time. It enables us to advance a step further to realize a communicative intelligence with many fruitful applications.

Intelligent media technologies attempt to capture and augment people's communicative activities by embedding computers into the environment to enhance interactions in an unobtrusive manner. The introduction of embodied conversational agents that might mediate conversations among people in a social context is the next step in the process. The scope of intelligent media technologies includes design and development of intelligent supports for content production, distribution, and utilization, since rich content is crucial for communication in many applications. The promising applications of intelligence media technologies include e-learning, knowledge management systems, e-democracy, and other communication-intensive subject domains. 30
