Methodologies and Results in Grapevine Research Serge Delrot,Hipólito Medrano,Etti Or,Luigi Bavaresco,Stella Grando,2010-10-19 Grapevine is a crop of major economical interest and wine represents a multicultural heritage which has been growing since several milleniums Yet modern viticulture must face several challenges Global climate has increased berry sugar content and alcohol in the wine whereas phenolic and aromatic ripeness are not always achieved Water supply is becoming shorter New varieties better adapted to new climatic conditions might have to be planted which may affect wine typicity Phytochemical treatments are more controlled and the consumer pays increasing attention to environmentally safe practices New methods reducing pesticide use but maintaining yield and typicity must be designed The present book illustrates the recent progress made in ecophysiology molecular and cell biology and pathology of grapevine as well as in precision viticulture and berry composition Combination of these new tools with field

observations will undoubtedly make it easier to face the challenges described above. These multidisciplinary contributions will be of interest to anyone involved in grapevine and wine activities.

Microbial Food Safety and Preservation

Techniques V Ravishankar Rai, Jamuna A. Bai, 2014-09-26. In recent years rapid strides have been made in the fields of microbiological aspects of food safety and quality, predictive microbiology and microbial risk assessment, microbiological aspects of food preservation and novel preservation techniques. Written by the experts and pioneers involved in many of these advances, *Microbial Food Safety and Preservation* is a comprehensive handbook. *Molecular Diagnostic PCR Handbook* Gerrit J. Viljoen, Louis H. Nel, John R. Crowther, 2005-12-06. PREFACE. The Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture is involved in agricultural research and development and assists Member States of FAO and IAEA in improving strategies to ensure food security through the use of nuclear techniques and related biotechnologies where such techniques have a valuable and often unique role. In particular, molecular diagnostic methods have rapidly evolved in the past twenty years since the advent of the Polymerase Chain Reaction (PCR). They are used in a wide range of agricultural areas such as improving soil and water management, producing better crop varieties, diagnosing plant and animal diseases, controlling insect pests and improving food quality and safety. The uses of nucleic acid directed methods have increased significantly in the past five years and have made important contributions to disease control country programmes for improving national and international trade. These developments include the more routine use of PCR as a diagnostic tool in veterinary diagnostic laboratories. However, there are many problems associated with the transfer and particularly the application of this technology. These include lack of consideration of the establishment of quality assured procedures, the required set up of the laboratory and the proper training of staff. This can lead to a situation where results are not assured. This book gives a comprehensive account of the practical aspects of PCR and strong consideration is given to ensure its optimal use in a laboratory environment. This includes the setting up of a PCR laboratory, Good Laboratory Practice and standardised PCR protocols.
