Recommended Contract Practices for Underground Construction, Second Edition Sarah H. Wilson, 2019-05-10 A successful underground project is one where relationships are strong the objectives as understood by each party are met or exceeded and the work product serves its stakeholders and is maintainable in a way that fits with the project vision High level metrics for project success relate to safety quality schedule and budget The first edition of Recommended Contract Practices for Underground Construction has become a valued resource for the underground industry serving as a concise guide for drafting and implementation of contract provisions It provided improvements to underground contracting practices during all project stages It also presented clear roles and responsibilities for project participants to promote better contracts This second edition was undertaken by the UCA of SME because the industry has undergone numerous changes over the last decade Changes in tunneling technology more common use of design build as a contracting mechanism and many lessons learned have sparked some creative contract approaches The recommendations contained in this edition are intended to guide owners and their engineers in developing and administering contracts and to give contractors a better understanding of the rationale behind contract provisions The goal is that more underground projects in this country can be best projects where improved relationships and fair contracts enable all project participants to personally invest in cost effective profitable projects ensuring the continued health of the underground industry

Engineering Challenges for Sustainable Underground Use Sherif Agaiby, Piergiorgio Grasso, 2017-07-11 This volume comprises a set of high quality refereed papers that address the different aspects related to the geotechnical and structural design and construction of deep excavations tunnels and underground space facilities as well as the effect of their construction on the surroundings The papers cover planning design modeling monitoring and construction aspects of these essential structures This volume is part of the proceedings of the 1st GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures Egypt 2017

Recommended Contract Practices for Underground Construction William W. Edgerton, 2008 Underground construction is more complex than ever Demand for space is increasing new technologies are constantly evolving and more stakeholders are asserting influence Yet one of the most challenging and frustrating characteristics of underground construction remains often contract language does not account for the unique nature of building underground Recommended Contract Practices for Underground Construction is the first industry wide effort to improve contract procedures in more than 30 years Commissioned by the Underground Construction Association of the Society for Mining Metallurgy and Exploration this manual is an indispensable resource for contractors consultants suppliers and owners anticipating underground projects The authors suggest better practices during all stages of a project when decisions are made that can affect the contract positively or negatively Part one focuses on the practices and disciplines that build the foundation for effective contracts during the early phases of a project Part two discusses best practices for contract provisions payment mechanisms and dispute resolution By following these recommendations you ll reduce the mistrust and costly disputes that often arise from the contract process The result will be improved relationships better contracts and most importantly projects that are most cost effective for owners and more profitable for contractors

Tunnel Design Methods Antonio Bobet, Herbert H. Einstein, 2023-09-12 Tunnel Design Methods covers analytical numerical and empirical methods for the design of tunnels in soil and in rock The material is intended for design engineers looking for detailed methods for graduate students who are interested in tunnelling and for researchers working on various aspects of ground support interaction under static and seismic loading The book is divided into seven chapters covering fundamental concepts on ground and support behavior and on ground excavation

support interaction and provides detailed information on analytical and numerical methods used for the design of tunnels with applications and on the latest developments on empirical methods. The principles and formulations included are used throughout the book to provide insight into the response of tunnels under both simple and complex loading conditions thus providing the reader with fundamental understanding of tunnel behavior. Both authors have experience in tunnelling and have worked extensively in practice designing tunnels both in the United States and abroad and in research.

Ground Characterization and Structural Analyses for Tunnel Design Benjamín Celada, Z.T. Bieniawski, 2019-08-06 This practical and design oriented book focuses on ground characterization and structural calculation as part of the active structural design methodology. With a focus on rock tunnelling it offers a comprehensive rather than a topic based perspective deriving sound tunnel design criteria and methods from basic principles. Ground characterization includes excavations site investigation and in situ stress determination culminating in geotechnical classifications. The book then deals with various construction methods and their appropriate calculations which range from constitutive models for the stress strain behaviour of an excavation and tunnel support elements to a full stress strain analysis methodology. The heavily practical approach of the book draws on the authors twenty years of tunnelling experience in Spain and South America. It will help any young or established professional who wants to develop a career in the underground field across both civil engineering and geology. As it incorporates the very fundamentals of tunneling design it can be used as a support for tunneling courses or as a textbook for master's and PhD courses. Benjamín Celada was Chief Tunnel Engineer at Hunosa and Potasas de Navarra S.A. before founding Geocontrol S.A. He has also worked for twenty years as Professor of Underground Works at the Polytechnic Mining University in Madrid Spain. Z.T. Bieniawski directed the Rock Mechanics Department of the Council for Scientific and Industrial Research in Pretoria then taught at the Pennsylvania State University for twenty years.

Proceedings of the International Workshop on Rock Mass Classification in Underground Mining Christopher Mark, Rimas Thomas Pakalnis, Robert J. Tuchman, 2007 *Underground Space - The 4th Dimension of Metropolises, Three Volume Set +CD-ROM* Jiri Bartak, Ivan Hrdina, Georgij Romancov, Jaromir Zlamal, 2007-05-11 The so called fourth dimension of a metropolis is the underground space beneath a city which typically includes structures such as tunnels which facilitate transport and provide gas water and other supplies. Underground space may also be utilised for living working and recreational facilities and industrial storage. These volumes focus on underground.
