

JURASSIC PARK RAPTOR VS REAL RAPTORS

(based on the current scientific understanding)

CLEVER GIRL?

The movie raptors appear to have intelligent killing instincts.

Although intelligence is necessary and useful to other vertebrates, there is no evidence for *Mandibator* and its possessing it to such high levels.

SIZE

In the movie raptors are tall enough to stare from feet in the eye.

Mandibator would have stood as tall as a small child and *Bamburyllus* were a half size from height.

Since Jurassic Park was released, raptors of a similar size to the ones in it, the *Mandibator* and *Bamburyllus* have been described.

NAMING

The Jurassic Park raptors were based on the North American *Bamburyllus*.

In the movie they are called *Velociraptor*, partly because of existing names of the time, but mostly because it just sounds cool.

FEATHERS

The movie raptors could skin wrapped dinosaurs. *Velociraptor*, *Bamburyllus* and its were covered in feathers from head to tail.

TAILS

The movie raptors have steady tails which they wiggle around. The real animals used their tails as a stiff counterbalance holding it straight with wiggled sections.

HANDS

Movie raptors have clawed hands.

The actual dinosaurs were not able to move their hands that way. Their hands could only move in a "flapping" position.

FEET

The raptors in Jurassic Park walk on big padded feet.

Bamburyllus and its relatives had more slender, bird-like feet.

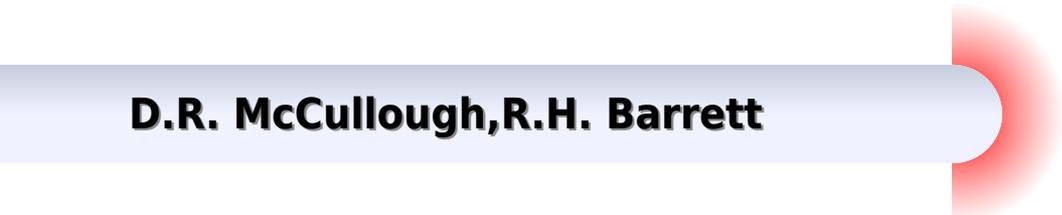

Mandibator
