This two volume book is devoted to mathematical theory numerics and applications of hyperbolic problems Hyperbolic
problems have not only a long history but also extremely rich physical background The development is highly stimulated by
their applications to Physics Biology and Engineering Sciences in particular by the design of effective numerical algorithms
Due to recent rapid development of computers more and more scientists use hyperbolic partial differential equations and
related evolutionary equations as basic tools when proposing new mathematical models of various phenomena and related
numerical algorithms This book contains 80 original research and review papers which are written by leading researchers
and promising young scientists which cover a diverse range of multi disciplinary topics addressing theoretical modeling and
computational issues arising under the umbrella of Hyperbolic Partial Differential Equations It is aimed at mathematicians
researchers in applied sciences and graduate students Advances in Hypersonics

BALLMAN, BERTIN, PERIAUX, 2012-12-06 These three volumes entitled *Advances in Hypersonics* contain the Proceedings of
the Second and Third Joint US Europe Short Course in Hypersonics which took place in Colorado Springs and Aachen The
Second Course was organized at the US Air Force Academy USA in January 1989 and the Third Course at Aachen Germany in
October 1990 The main idea of these Courses was to present to chemists computer scientists engineers experimentalists
mathematicians and physicists state of the art lectures in scientific and technical disciplines including mathematical
modeling computational methods and experimental measurements necessary to define the aerothermo dynamic
environments for space vehicles such as the US Orbiter or the European Hermes flying at hypersonic speeds The subjects
can be grouped into the following areas Physical environments configuration requirements propulsion systems including
airbreathing systems experimental methods for external and internal flow theoretical and numerical methods Since hyper
sonic flight requires highly integrated systems the Short Courses not only aimed to give in depth analysis of hypersonic

research and technology but also tried to broaden the view of attendees to give them the ability to understand the complex problem of hypersonic flight Most of the participants in the Short Courses prepared a document based on their presentation for reproduction in the three volumes Some authors spent considerable time and energy going well beyond their oral presentation to provide a quality assessment of the state of the art in their area of expertise as of 1989 and 1991
