

Ontogeny & Phylogeny

- **Heterochrony** – evolutionary change in timing of development.
 - Characteristics can be added late in development and features are then moved to an earlier stage.
 - Ontogeny can be shortened in evolution.
 - Terminal stages may be deleted causing adults of descendants to resemble youthful ancestors.
- **Paedomorphosis**
 - Retention of ancestral juvenile characters by descendant adults.

Ontogeny And Phylogeny:

Ontogeny and Phylogeny Stephen Jay Gould, 1985-01-17 Ontogeny recapitulates phylogeny was Haeckel's answer to 19th century biology's most vexing question: what is the relationship between individual development and the evolution of species and lineages? Gould documents the history of the idea of recapitulation from its first appearance among the pre-Socratics to its fall in the early 20th century.

Ontogeny and Phylogeny Stephen Jay Gould, 1977-08-02 Ontogeny recapitulates phylogeny was Haeckel's answer to the wrong one to the most vexing question of nineteenth century biology: what is the relationship between individual development, ontogeny, and the evolution of species and lineages, phylogeny. In this, the first major book on the subject in fifty years, Stephen Jay Gould documents the history of the idea of recapitulation from its first appearance among the pre-Socratics to its fall in the early twentieth century. Mr. Gould explores recapitulation as an idea that intrigued politicians and theologians as well as scientists. He shows that Haeckel's hypothesis that human fetuses with gill slits are literally tiny fish—exact replicas of their water-breathing ancestors—had an influence that extended beyond biology into education, criminology, psychoanalysis. Freud and Jung were devout recapitulationists, and racism. The theory of recapitulation, Gould argues, finally collapsed not from the weight of contrary data but because the rise of Mendelian genetics rendered it untenable. Turning to modern concepts, Gould demonstrates that even though the whole subject of parallels between ontogeny and phylogeny fell into disrepute, it is still one of the great themes of evolutionary biology. Heterochrony, changes in developmental timing producing parallels between ontogeny and phylogeny, is shown to be crucial to an understanding of gene regulation, the key to any rapprochement between molecular and evolutionary biology. Gould argues that the primary evolutionary value of heterochrony may lie in immediate ecological advantages for slow or rapid maturation rather than in long-term changes of form, as all previous theories proclaimed. Neoteny, the opposite of recapitulation, is shown to be the most important determinant of human evolution. We have evolved by retaining the juvenile characters of our ancestors and have achieved both behavioral flexibility and our characteristic morphology, thereby large brains, by prolonged retention of rapid fetal growth rates, for example. Gould concludes that there may be nothing new under the sun but permutation of the old: within complex systems, can do wonders. As biologists, we deal directly with the kind of material complexity that confers an unbounded potential upon simple, continuous changes in underlying processes. This is the chief joy of our science.

Ontogeny, Phylogeny, and Historical Development Sidney Strauss, 1988 The authors in this book treat a number of issues that pertain to relations between ontogeny, phylogeny, and historical development. Some show parallels among them; others show convergences; while still others show how they can inform each other. Chapters deal with the importance of this area for developmental theories, the distinction between changes in expert knowledge as it pertains to historical development and novice knowledge, ontogenesis, what constitutes a theory in science and in children's thought, organizations, and the importance of historical models for characterizing children's conceptual structures.

An Outline of

the Relation of Ontogeny to Phylogeny Within the Amphibia G. K. Noble, 1925 *Ontogeny and phylogeny* Stephen J. Gould, 1985 *Ontogeny and Systematics* Christopher John Humphries, 1988 This collection of short stories focuses on the Scottish civil war of 1644-45 in which the Marquis of Montrose led his royalist forces in a series of stunning victories against the odds before his final defeat at Philiphaugh Each of Hogg's five tales centres on one of the five major battles of Montrose's brilliant but ultimately futile campaign Each tale is utterly different from the others in genre and tone but taken together they build up a composite picture of what it was like to experience the anarchy and confusion of the time at first hand

Where Biology Meets Psychology Valerie Gray Hardcastle, 1999 A great deal of interest and excitement surround the interface between the philosophy of biology and the philosophy of psychology yet the area is neither well defined nor well represented in mainstream philosophical publications This book is perhaps the first to open a dialogue between the two disciplines Its aim is to broaden the traditional subject matter of the philosophy of biology while informing the philosophy of psychology of relevant biological constraints and insights The book is organized around six themes functions and teleology evolutionary psychology innateness philosophy of mind philosophy of science and parallels between philosophy of biology and philosophy of mind Throughout one finds overlapping areas of study larger philosophical implications and even larger conceptual ties Woven through these connections are shared concerns about the status of semantics scientific law evolution and adaptation and cognition in general Contributors Andr Ariew Mark A Bedau David J Buller Paul Sheldon Davies Stephen M Downes Charbel Ni o El Hani Owen Flanagan Peter Godfrey Smith Todd Grantham Valerie Gray Hardcastle Gary Hatfield Daniel W McShea Karen Neander Shaun Nichols Antonio Marcos Pereira Tom Polger Lawrence A Shapiro Kim Sterelny Robert A Wilson William C Wimsatt Recapitulation in Close-up Scott M. K. Noble, 1925 **Postformal Education** Jennifer M. Gidley, 2016-08-05 This book explains why the current education model which was developed in the 19th century to meet the needs of industrial expansion is obsolete It points to the need for a new approach to education designed to prepare young people for global uncertainty accelerating change and unprecedented complexity The book offers a new educational philosophy to awaken the creative big picture and long term thinking that will help equip students to face tomorrow's challenges Inside readers will find a dialogue between adult developmental psychology research on higher stages of reasoning and today's most evolved education research and practice This dialogue reveals surprising links between play and wisdom imagination and ecology holism and love The overwhelming issues of global climate crisis growing economic disparity and the youth mental health epidemic reveal how dramatically the current education model has failed students and educators This book raises a planet wide call to deeply question how we actually think and how we must educate It articulates a postformal education philosophy as a foundation for educational

futures The book will appeal to educators educational philosophers pre service teacher educators educational and developmental psychologists and educational researchers including postgraduates with an interest in transformational educational theories designed for the complexity of the 21st century This is the most compelling book on education I have read for many years It has major implications for all who are in a position to influence developments in teacher education and educational policy

Gidley is one of the very rare scholars who can write intelligently and accessibly about the past present and future in education I was challenged and ultimately convinced by her contention that what masquerades as education today must be seen for what it is an anachronistic relic of the industrial past Gidley s challenge is to co evolve a radically new education All who seek to play a part must read this book
