Pleadings Game An Artificial Intelligence Model Of Procedural Justice:

The Pleadings Game Thomas F. Gordon, 2013-03-09 The British philosopher Stephan Toulmin in his *The Uses of Argument* made the provocative claim that logic is generalized jurisprudence For Toulmin logic is the study of nonns for practical argumentation and decision making In his view mathematical logicians were preoccupied with fonnalizing the concepts of logical necessity consequence and contradiction at the expense of other equally important issues such as how to allocate the burden of proof and make rational decisions given limited resources He also considered it a mistake to look primarily to psychology linguistics or the cognitive sciences for answers to these fundamentally nonnative questions Toulmin s concerns about logic writing in the 1950 s are equally applicable to the field of Artificial Intelligence today The mainstream of Artificial Intelligence has focused on the analytical and empirical aspects of intelligence without giving adequate attention to the nonnative regulative functions of knowledge representation problem solving and decision making Nonnative issues should now be of even greater interest with the shift in perspective of AI from individual to collective intelligence in areas such as multi agent systems cooperative design distributed artificial intelligence and computer supported cooperative work Networked virtual societies of humans and software agents would also require virtual legal systems to fairly balance interests resolve conflicts and promote security

Judicial Applications of Artificial Intelligence Giovanni Sartor, L. Karl Branting, 2013-04-17 The judiciary is in the early stages of a transformation in which AI Artificial Intelligence technology will help to make the judicial process faster cheaper and more predictable without compromising the integrity of judges discretionary reasoning Judicial decision making is an area of daunting complexity where highly sophisticated legal expertise merges with cognitive and emotional competence How can AI contribute to a process that encompasses such a wide range of knowledge judgment and experience Rather than aiming at the impossible dream or nightmare of building an automatic judge AI research has had two more practical goals producing tools to support judicial activities including programs for intelligent document assembly case retrieval and support for discretionary decision making and developing new analytical tools for understanding and modeling the judicial process such as case based reasoning and formal models of dialectics argumentation and negotiation Judges squeezed between tightening budgets and increasing demands for justice are desperately trying to maintain the quality of their decision making process while coping with time and resource limitations Flexible AI tools for decision support may promote uniformity and efficiency in judicial practice while supporting rational judicial discretion Similarly AI may promote flexibility efficiency and accuracy in other judicial tasks such as drafting various judicial documents The contributions in this volume exemplify some of the directions that the AI transformation of the judiciary will take

Information Modelling and Knowledge Bases XX Y. Kiyoki, T. Tokuda, H. Jaakkola, 2009-02-11 In the last decades information modelling and knowledge bases have become essentially important subjects not only in academic communities related to information systems and computer science but also in the business area where information

technology is applied The 18th European Japanese Conference on Information Modelling and Knowledge Bases EJC 2008 continues the series of events that originally started as a cooperation initiative between Japan and Finland Later the geographical scope of these conferences expanded to cover the whole of Europe and other countries as well The EJC conferences constitute a worldwide research forum for the exchange of scientific results and experiences achieved in computer science and other related disciplines using innovative methods and progressive approaches In this way a platform has been established drawing together researches as well as practitioners dealing with information modelling and knowledge bases The main topics of EJC conferences target the variety of themes in the domain of information modelling conceptual analysis multimedia knowledge bases design and specification of information systems multimedia information modelling multimedia systems ontology software engineering knowledge and process management The aim of this publication is also applying new progressive theories To this end much attention is paid also to theoretical disciplines including cognitive science artificial intelligence logic linguistics and analytical philosophy

Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2013-06-29 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and/or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

Rule-Based Modeling and Computing on the Semantic Web Monica Palmirani, Davide Sottara, 2011-10-21 This book

constitutes the refereed proceedings of the International RuleML Symposium RuleML 2011 America held in Fort Lauderdale FL USA in November 2011 collocated with the 22nd International Joint Conference on Artificial Intelligence IJCAI 2011 It is the second of two RuleML events that take place in 2011 The first RuleML Symposium RuleML 2011 Europe has been held in Barcelona Spain in July 2011 The 12 full papers 5 short papers and 5 invited track and position papers presented together with 3 keynote speeches were carefully reviewed and selected from numerous submissions The accepted papers address a wide range of rules semantic technology and cross industry standards rules and automated reasoning rule based event processing and reaction rules vocabularies ontologies and business rules cloud computing and rules clinical semantics and rules

Studies in Legal Logic Jaap Hage, 2006-03-30 Studies in Legal Logic is a collection of nine interrelated papers about the logic epistemology and ontology of law All of the papers were written after the publication of the author's Reasoning with Rules and supplement the issues addressed therein Some of the papers are new others have been revised substantially after the publication of their original versions The emphasis is on analysis not on logical technicalities Studies in Legal Logic contains chapters about the nature of norms the role of coherence in the law the nature of defeasibility the role of dialectics in law and artificial intelligence the statics and dynamics of the law and the consistency of rules Moreover it contains a new simplified and yet more powerful version of Reason based Logic and extensive examples of how it can be used for the analysis of legal reasoning The examples deal with legal theory construction case based reasoning and judicial proof

AI Approaches to the Complexity of Legal Systems Pompeu Casanovas, Ugo Pagallo, Giovanni Sartor, Gianmaria Ajani, 2010-10-21 The inspiring idea of this workshop series Artificial Intelligence Approaches to the Complexity of Legal Systems AICOL is to develop models of legal knowledge concerning organization structure and content in order to promote mutual understanding and communication between different systems and cultures Complexity and complex systems describe recent developments in AI and law legal theory argumentation the Semantic Web and multi agent systems The aim of the AICOL workshops is thus to offer effective support for the exchange of knowledge and methodological approaches between scholars from different scientific fields by highlighting their similarities and differences The comparison of multiple formal approaches to the law such as logical models cognitive theories argumentation frameworks graph theory game theory as well as opposite perspectives like internal and the external viewpoints this volume stresses possible convergences as for instance are possible in the realms of conceptual structures argumentation schemes emergent behaviors learning evolution adaptation and simulation This volume assembles 15 thoroughly refereed and revised papers selected from two workshops organized at the XXIV World Congress of Philosophy of Law and Social Philosophy IVR Beijing China September 15 20 2009 and at JURIX 09 December 16 19 2009 Rotterdam The papers are organized in topical sections on language and complex systems in law ontologies and the representation of legal knowledge argumentation and logics as well as dialogue and legal multimedia

Conversations in Philosophy, Law, and Politics Ruth Chang, Amia Srinivasan, 2024 New Conversations in Philosophy Law

and Politics offers a new agenda for work where these three disciplines meet Eminent scholars and leading young thinkers provide fifteen conversations about lively current issues in our social world such as AI and democracy political obligation praise and blame justice and intersectionality *Advances in Agent Communication* Frank Dignum, 2004-01-30

In this book we present a collection of papers around the topic of Agent Communication The communication between agents has been one of the major topics of research in multi agent systems The current work can therefore build on a number of previous workshops the proceedings of which have been published in earlier volumes in this series The basis of this collection is the accepted missions of the workshop on Agent Communication Languages which was held in conjunction with the AAMAS conference in July 2003 in Melbourne The workshop received 15 submissions of which 12 were selected for publication in this volume Although the number of submissions was less than expected for an important area like Agent Communication there is no reason to worry that this area does not get enough attention from the agent community First of all the 12 selected papers are all of high quality The high acceptance rate is only due to this high quality and not to the necessity to select a certain number of papers Besides the high quality workshop papers we noticed that many papers on Agent Communication found their way to the main conference We decided therefore to invite a number of authors to revise and extend their papers from this conference and to combine them with the workshop papers We believe that the current collection comprises a very good and quite complete overview of the state of the art in this area of research and gives a good indication of the topics that are of major interest at the moment

Legal Knowledge and Information Systems Danièle Bourcier, 2003 The range of topics addressed in this volume is broader than in previous JURIX volumes All the main legal functions are covered legal drafting legal negotiating legal decision making and legal argumentation

Logic Programming and Knowledge Representation Luis Moniz Pereira, 1998-08-26 This book presents the thoroughly refereed post workshop proceedings of the Third International Workshop on Logic Programming and Knowledge Representation LPKR 97 held in Port Jefferson NY USA in October 1997 The eight revised full papers presented have undergone a two round reviewing process also included is a comprehensive introduction surveying the state of the art in the area The volume is divided into topical sections on disjunctive semantics abduction priorities and updates

Legal Knowledge and Information Systems Bart Verheij, 2001 This volume contains the proceedings of the fourteenth JURIX conference held December 13 14 2001 at the University of Amsterdam The Foundation for Legal Knowledge Based Systems JURIX is a forum for research in law and computer science Since 1988 JURIX has organized annual international conferences on research in the field Topics addressed range from the theoretical such as the modelling of the law and legal reasoning to the practical such as the design of systems that support legal decision making and teaching

Methods of Argumentation Douglas Walton, 2013-08-26 Argumentation which can be abstractly defined as the interaction of different arguments for and against some conclusion is an important skill to learn for everyday life law science politics and business The best way to learn it is to try it out on real instances of arguments

found in everyday conversational exchanges and legal argumentation The introductory chapter of this book gives a clear general idea of what the methods of argumentation are and how they work as tools that can be used to analyze arguments Each subsequent chapter then applies these methods to a leading problem of argumentation Today the field of computing has embraced argumentation as a paradigm for research in artificial intelligence and multi agent systems Another purpose of this book is to present and refine tools and techniques from computing as components of the methods that can be handily used by scholars in other fields

Character Evidence Douglas Walton,2006-11-10 The theory in the book is based on the latest research in argumentation theory and especially on new applications of artificial intelligence AI to legal argumentation The methodology of the book derives from recent work in argumentation theory and AI in which forms of reasoning other than deductive and inductive have been the focus of much investigation The aim is not just to show how character judgments are made but to show how they should properly be made based on sound reasoning in order to avoid certain fallacies errors and superficial judgments of a kind that are common The book is about character judgments but centrally about the kind of logical reasoning and evidence that should properly be used to support or question such judgments According to the new theory put forward in this book such evidence is based on a kind of multi agent simulative reasoning in which one agent is able to explain the actions of another by understanding the situation confronted by the other and recreating the plan adopted by the other According to the theory one agent can reach reasoned conclusions about the presumed character properties of another using plan recognition and argumentation schemes representing stereotypical forms of reasoning We use character evidence every day in reasoning as in the inference He has a certain character trait so that is evidence he is the one who carried out this particular action

Argumentation Machines C. Reed,T.J. Norman,2013-03-09 In the late 1990s AI witnessed an increasing use of the term argumentation within its bounds in natural language processing in user interface design in logic programming and nonmonotonic reasoning in AI s interface with the legal community and in the newly emerging field of multi agent systems It seemed to me that many of these uses of argumentation were inspired by of ten inspired guesswork and that a great majority of the AI community were unaware that there was a maturing rich field of research in Argumentation Theory and Critical Thinking and Informal Logic that had been steadily re building a scholarly approach to the area over the previous twenty years or so Argumentation Theory on its side was developing theories and approaches that many in the field felt could have a role more widely in research and society but were for the most part unaware that AI was one of the best candidates for such application

Agent Computing and Multi-Agent Systems

Aditya Ghose,Guido Governatori,Ramakoti Sadananda,2009-04-21 This book constitutes the thoroughly refereed post workshop proceedings of the 10th Pacific Rim International Workshop on Multi Agents PRIMA 2007 held in Bangkok Thailand in November 2007 The 22 revised full papers and 16 revised short papers presented together with 11 application papers were carefully reviewed and selected from 102 submissions Ranging from theoretical and methodological issues to various

applications in different fields the papers address many current subjects in multi agent research and development Oxford Handbook of Reasons and Normativity Daniel Star,2018-05-31 The Oxford Handbook of Reasons and Normativity maps a central terrain of philosophy and provides an authoritative guide to it Few concepts have received as much attention in recent philosophy as the concept of a reason to do or believe something And one of the most contested ideas in philosophy is normativity the ought in claims that we ought to do or believe something This is the first volume to provide broad coverage of the study of reasons and normativity across multiple philosophical subfields In addition to focusing on reasons in ethics epistemology and the philosophy of mind action and language the Handbook explores philosophical work on the nature of normativity in general Topics covered include the unity of normativity the fundamentality of reasons attempts to explain reasons in other terms the relation of motivational reasons to normative reasons the internalist constraint the logic and language of reasons and ought connections between reasons intentions choices and actions connections between reasons reasoning and rationality connections between reasons knowledge understanding and evidence reasons encountered in perception and testimony moral principles prudence and reasons agent relative reasons epistemic challenges to our access to reasons normativity in relation to meaning concepts and intentionality instrumental reasons pragmatic reasons for belief aesthetic reasons and reasons for emotions **Argumentation in Multi-Agent Systems** Peter McBurney,Iyad

Rahwan,Simon D. Parsons,2012-02-21 This book constitutes the thoroughly reviewed post proceedings of the 7th International Workshop on Argumentation in Multi Agent Systems ArgMas 2010 held in Toronto Canada in May 2010 as a satellite workshop of AAMAS 2010 The 14 revised full papers taken from ArgMAS 2010 were carefully reviewed and improved during two rounds of revision Also included are 4 invited papers based on presentations on argumentation at the AAMAS 2010 main conference All together the 18 papers included in the book give a representative overview on current research on argumentation in multi agent systems The papers are organized in topical sections on practical reasoning and argument about action applications and theoretical aspects *Handbook of Legal Reasoning and Argumentation* Giorgio Bongiovanni,Gerald Postema,Antonino Rotolo,Giovanni Sartor,Chiara Valentini,Douglas Walton,2018-07-02 This handbook addresses legal reasoning and argumentation from a logical philosophical and legal perspective The main forms of legal reasoning and argumentation are covered in an exhaustive and critical fashion and are analysed in connection with more general types and problems of reasoning Accordingly the subject matter of the handbook divides in three parts The first one introduces and discusses the basic concepts of practical reasoning The second one discusses the general structures and procedures of reasoning and argumentation that are relevant to legal discourse The third one looks at their instantiations and developments of these aspects of argumentation as they are put to work in the law in different areas and applications of legal reasoning
