Linguistic Geometry Boris Stilman,2012-12-06 Linguistic

Geometry From Search to Construction is the first book of its kind Linguistic Geometry LG is an approach to the construction of mathematical models for large scale multi agent systems A number of such systems including air space combat robotic manufacturing software re engineering and Internet cyberwar can be modeled as abstract board games These are games with moves that can be represented by the movement of abstract pieces over locations on an abstract board The purpose of LG is to provide strategies to guide the games participants to their goals Traditionally discovering such strategies required searches in giant game trees These searches are often beyond the capacity of modern and even conceivable future computers LG dramatically reduces the size of the search trees making the problems computationally tractable LG provides a formalization and abstraction of search heuristics used by advanced experts including chess grandmasters Essentially these heuristics replace search with the construction of strategies To formalize the heuristics LG employs the theory of formal languages i e formal linguistics as well as certain geometric structures over an abstract board The new formal strategies solve problems from different domains far beyond the areas envisioned by the experts For a number of these domains Linguistic Geometry yields optimal solutions

Computing with Words in Information/Intelligent Systems 1 Lotfi A. Zadeh, 2013-03-09 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh s fuzzy sets theory Remembering Wittgenstein s statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature

Stamper, 2012-12-06 Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies It shares common interests with many other approaches to information and organisations such as computer science computational semiotics organisational engineering and language action perspective The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines The analysis and design of information systems develops methods for solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organisational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organisational and technical systems This perspective is outlined in the chapter presentations of *Information Organisation and Technology*
