Development and Semi-periphery Renato Boschi, Carlos Henrique Santana, 2013-11-01

Development and Semi periphery presents a collection of articles that focus on comparative analysis of development trajectories in the semi peripheral countries of South America and Central Eastern Europe. As opposed to the transitology studies that were prevalent in the 1990s and that treated the neoliberal context in these two regions separately, the articles in this book instead offer a new comparative analysis focusing on the consequences of neoliberal reforms and the new actors that deal with their results. The essays discuss the various forms of state that have unfolded in different peripheral countries, their role in the social engineering of economic models and social policies, and the impact of state capacities and ideas on institutional innovation. The volume also compares transformations in political culture, collective identities, and contentious politics in both areas.

National Power and International Geostucture Daniel Morales Ruvalcaba, Alberto Rocha Valencia, 2024-04-18

This book addresses three innovative aspects for the study of International Relations: first, it proposes a novel theoretical methodological framework for the study of national power and based on this, a quantitative analysis technique is formulated that allows us to study the evolution of state power over almost five decades. Second, states play a fundamental role in the international system, which is why the study of their roles in the world cannot be limited to old, insufficient, and contradictory categorizations. Having new categories of states becomes an even more urgent task in the rapidly changing international order than it is today. This book proposes nine categories of powers and states that cover all the countries that currently exist. Third, the international geostructure of world power is proposed, which represents a new theoretical notion that helps to explain how the international insertion of states and their possibilities of action are conditioned by the unequal distribution of national power and by their structural positioning in the international system. This book is for all students of International Relations, academics, and people who want to understand national power as a fundamental factor in relations between countries.

Future Spaces of Power Caroline Alphin, E. Leigh McKagen, Shelby E. Ward, 2025-10-16

Future Spaces of Power explores political, cultural, and societal narratives of future space(s) on a global scale to complicate the cultural logic of systemic futures that exist outside the boundaries of dominant political imaginaries. Contributors critically engage with alternative visions found in literature, film, and other cultural artifacts that encourage us to either live with or escape from the systemic conditions of neoliberalism and late capitalism and consider what these alternative visions might do or fail to do in combating anti-democratic futures, environmental degradation, and new forms of imperialism. Through these analyses, the volume collectively argues that anti-postmodern and postmodern readings of future

spaces overlook the everyday lived experiences of certain bodies including chronic health problems effects from systemic racism and other experiences of insecurity fear and death in the face of institutionalized violence by disregarding differential experiences of time within different spatial contexts Contributors suggest that critiques of narratives occurring within and about virtual and metaspaces artificial intelligence space exploration and even the colonization of outer space can provide critical insights concerning global futures and our perceptions of space and time especially as they inform how we should live in the present amid environmental destruction information capitalism neoliberalism and the remaining infrastructures of colonialism Ultimately this book interrogates how a variety of media shape and inform our understanding and assumptions about conceptualizations of future space s as it demonstrates how governmentality eliminates and regulates surplus bodies both overtly and covertly through the technological spatial discursive and temporal management of space
