Sentence Processing Vol 31 A Crosslinguistic Perspective:

Cross-linguistic Variation in Sentence Processing Despoina Papadopoulou, 2006-08-27 The central question that I will pursue in this study concerns the universality of the human sentence processing mechanism. It will be explored whether there are cross linguistic differences in parsing by presenting psycholinguistic evidence from Greek. Empirical data collected from both native speakers and second language learners of Greek will be used to assess various parsing models and to investigate parsing mechanisms employed in Greek. The results from the L2 learners will be additionally used to shed light on the nature of sentence processing in a second language. Moreover, a supplementary objective of this study is to provide insights into the question of whether discourse biases guide initial parsing choices. The goal of any theory of sentence processing is to determine how people arrive at the desired interpretation of a given sentence attempting thus to investigate the very nature of the human language processor. Sentence processing is a rapid and automatic process, one which is closely linked in time to the input. Garrett 1990: 136. Pickering 1999. This means that sentence processing proceeds in an incremental fashion: once each word is encountered, it is integrated to the sentence analysis. Sentence processing necessarily involves a syntactic analysis of the sentence, usually referred to as parsing, which allows the reader or listener to identify the syntactic role of words within each sentence and an analysis which involves the use of semantic and pragmatic information to arrive at a plausible interpretation.

Sentence Processing: A Crosslinguistic Perspective Dieter Hillert, 1998-07-13 The innovative element of this volume is its overview of the fundamental psycholinguistic topics involved in sentence processing. While most psycholinguistic studies focus on a single language and induce a general model of universal sentence processing, this volume proposes a cross linguistic approach. It contains two distinct features first embraced in the 18th century by brothers Freiherr Wilhelm von Humboldt and Alexander von Humboldt. First, it offers a linguistic theory that characterizes universal cognitive features of the human language processor or the mind and its biological source independent of a single language structure. Second, it contains a language theory which considers the diversity of linguistic structures and provides a powerful theory of language processing. Contributors cover a wide range of topics including word recognition, fixed expressions, grammatical constraints, empty categories, and parsing. Their research involves analyses of 12 languages. This book provides an overview of central psycholinguistic topics in sentence processing and combines deductive and inductive methods in fashioning an innovative approach. The contributors address word recognition, fixed expressions, grammatical constraints, empty categories, and parsing. Its original papers form a coherent presentation.

Experimental Studies in Word and Sentence Prosody Carlos Gussenhoven, Tomas Riad, 2009-02-26 This volume presents 14 experimental studies of lexical tone and intonation in a wide variety of languages Six papers deal with the discriminability or the function of intonation contours and lexical tones in specific languages as established on the basis of listener responses as well as with brain activation patterns resulting from the perception of tonal and intonational stimuli The remaining eight papers report on detailed phonetic findings on a variety of tonal phenomena in a number of languages including declination in tone languages final lowering consonant tone interactions and pitch target alignment
