Separation Of Variables For Riemannian Spaces Of Constant Curvature:

Separation of Variables for Riemannian Spaces of Constant Curvature E. G. Kalnins, 1986 Comprehensive and up to date survey of research on torsion theories defined on module categories over noncommutative rings and the use in the localization of rings and modules

Separation of Variables for Complex Riemannian Spaces of Constant Curvature E. G. Kalnins, Willard Miller, G. J. Reid, 1983

Separation of Variables and the Gaudin Magnet E. G. Kalnins, Willard Miller, 1993

An Algebraic Geometric Approach to Separation of Variables Konrad Schöbel, 2015-10-15

Konrad Schöbel aims to lay the foundations for a consequent algebraic geometric treatment of variable Separation which is one of the oldest and most powerful methods to construct exact solutions for the fundamental equations in classical and quantum physics The present work reveals a surprising algebraic geometric structure behind the famous list of separation coordinates bringing together a great range of mathematics and mathematical physics from the late 19th century theory of separation of variables to modern moduli space theory Stasheff polytopes and operads I am particularly impressed by his mastery of a variety of techniques and his ability to show clearly how they interact to produce his results Jim Stasheff

Path Integrals, Hyperbolic Spaces And Selberg Trace Formulae (2nd Edition) Christian Grosche, 2013-07-26

In this second edition a comprehensive review is given for path integration in two and three dimensional homogeneous spaces of constant and non constant curvature including an enumeration of all the corresponding coordinate systems which allow separation of variables in the Hamiltonian and in the path integral The corresponding path integral solutions are presented as a tabulation Proposals concerning interbasis expansions for spheroidal coordinate systems are also given In particular the cases of non constant curvature Darboux spaces are new in this edition The volume also contains results on the numerical study of the properties of several integrable billiard systems in compact domains i e rectangles parallelepipeds circles and spheres in two and three dimensional flat and hyperbolic spaces In particular the discussions of integrable billiards in circles and spheres flat and hyperbolic spaces and in three dimensions are new in comparison to the first edition In addition an overview is presented on some recent achievements in the theory of the Selberg trace formula on Riemann surfaces its super generalization their use in mathematical physics and string theory and some further results derived from the Selberg super trace formula

Symplectic Geometry and Mathematical Physics P. Donato, 1991-12 This volume contains the proceedings of the conference Colloque de Geometrie Symplectique et Physique Mathematique which was held in Aix en Provence France June 11 15 1990 in honor of Jean Marie Souriau The conference was one in the series of international meetings of the Seminaire

Sud Rhodanien de Gometrie an organization of geometers and mathematical physicists at the Universities of Avignon Lyon Mar seille and Montpellier The scientific interests of Souriau one of the founders of geometric quantization range from classical mechanics symplectic geometry and quantization problems to general relativity and astrophysics The themes of this conference cover only the first two of these four areas The subjects treated in this volume could be classified in the following way symplectic and Poisson geometry Arms Wilbour Bloch Ratiu Brylinski Kostant Cushman Sjamaar Dufour Lichnerowicz Medina Ouzilou classical mechanics Benenti Holm Marsden Marle particles and fields in physics Garcia Perez Munoz Masque Gotay Montgomery Ne eman Sternberg Sniatycki and quantization Blattner Huebschmann Karasev Rawnsley Roger Rosso Weinstein However these subjects are so interrelated that a classification by headings such as pure differential geometry applications of Lie groups constrained systems in physics etc would have produced a completely different clustering The list of authors is not quite identical to the list of speakers at the conference M Karasev was invited but unable to attend C Itzykson and M Vergne spoke on work which is represented here only by the title of Itzykson s talk *Symmetries And Nonlinear Phenomena - Proceedings Of The International School On Applied Mathematics* D Levi,Pavel Winternitz,1988-12-01 Starting from Sophus Lie the invariance of a differential equation under its continuous group of symmetries has become a major tool for solving ordinary and partial differential equations in particular nonlinear ones The proceedings focus on the application of these techniques to nonlinear partial differential equations The state of the art in this field is presented clearly in a series of comprehensive lectures Several lectures on applications point out the physical importance of such methods *Separable Boundary-Value Problems in Physics* Morten Willatzen,Lok C. Lew Yan Voon,2011-05-03 Innovative developments in science and technology require a thorough knowledge of applied mathematics particularly in the field of differential equations and special functions These are relevant in modeling and computing applications of electromagnetic theory and quantum theory e g in photonics and nanotechnology The problem of solving partial differential equations remains an important topic that is taught at both the undergraduate and graduate level *Separable Boundary Value Problems in Physics* is an accessible and comprehensive treatment of partial differential equations in mathematical physics in a variety of coordinate systems and geometry and their solutions including a differential geometric formulation using the method of separation of variables With problems and modern examples from the fields of nano technology and other areas of physics The fluency of the text and the high quality of graphics make the topic easy accessible The organization of the content by coordinate systems rather than by equation types is unique and offers an easy access The authors consider recent research results which have led to a much increased pedagogical understanding of not just this topic but of many other related topics in mathematical physics and which like the explicit discussion on differential geometry shows yet have not been treated in the older texts To the benefit of the reader a summary presents a convenient overview on all special functions covered Homework problems are included as well as

numerical algorithms for computing special functions Thus this book can serve as a reference text for advanced undergraduate students as a textbook for graduate level courses and as a self study book and reference manual for physicists theoretically oriented engineers and traditional mathematicians
