**Reliability and Statistics in Geotechnical Engineering** Gregory B. Baecher, John T. Christian, 2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered. Statistics, reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems. The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems. *Reliability Statistics in Geotechnical Engineering* comprehensively covers the subject of risk and reliability in both practical and research terms. Includes extensive use of case studies. Presents topics not covered elsewhere: spatial variability and stochastic properties of geological materials. No comparable texts available. Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes.

**Family and Population Changes in Singapore** Wei-Jun Jean Yeung, Shu Hu, 2018-04-17 This book depicts the evolution of Singapore's family and population landscape in the last half a century, the related public policies and future challenges. Since the country gained independence in 1965, family and population policies have been integral to her nation building strategies. The chapters discuss the changes in population compositions, family structures, relations and values among major ethnic groups. They also discuss policies for vulnerable populations such as female headed households, cross cultural families, same sex partnering, the elderly and low income families.

**Handbook of Environmental and Ecological Statistics** Alan E. Gelfand, Montserrat Fuentes, Jennifer A. Hoeting, Richard Lyttleton Smith, 2019-01-15 This handbook focuses on the enormous literature applying statistical methodology and modelling to environmental and ecological processes. The 21st century statistics community has become increasingly interdisciplinary, bringing a large collection of modern tools to all areas of application in environmental processes. In addition, the environmental community has substantially increased its scope of data collection, including observational data, satellite derived data and computer model output. The resultant impact in this latter community has been substantial; no longer are simple regression and analysis of variance methods adequate. The contribution of this handbook is to assemble a state of the art view of this interface. Features: An internationally regarded editorial team; A distinguished collection of contributors; A thoroughly contemporary treatment of a substantial interdisciplinary interface. Written to engage both statisticians as well as quantitative environmental researchers. 34 chapters covering methodology, ecological processes, environmental exposure and statistical methods in climate science.

**Customs Bulletin and Decisions**, 1999 **Low and Lower Fertility** Ronald R. Rindfuss, Minja Kim Choe, 2015-10-12 This volume examines two distinct low fertility scenarios that have emerged in economically advanced countries since the turn of the 20th century: one in which fertility is at or near replacement level and the other where fertility is well below replacement. It explores the way various institutions, histories and cultures influence fertility in a diverse range of countries in Asia, Europe, North America and Australia. The book features invited papers from the Conference on Low Fertility, Population Aging and Population Policy held December 2013.

and co sponsored by the East West Center and the Korea Institute for Health and Social Affairs KIHASA It first presents an overview of the demographic and policy implications of the two low fertility scenarios Next the book explores five countries currently experiencing low fertility rates China Hong Kong Japan Singapore and South Korea It then examines three countries that have close to replacement level fertility Australia the Netherlands and the United States Each country is featured in a separate chapter written by a demographer with expert knowledge in the area Very low fertility is linked to a number of conditions countries face including a declining population size At the same time low fertility and its effect on the age structure threatens social welfare policies This book goes beyond the technical to examine the core institutional policy and cultural factors behind this increasingly important issue It helps readers to make cross country comparisons and gain insight into how diverse institutions policies and culture shape fertility levels and patterns

*Long-Term Care around the World* Jonathan Gruber, Kathleen McGarry, 2025-05-14 A comparative analysis of both formal and informal long term care in ten of the world's wealthiest countries Nations throughout the world are in the midst of an enormous demographic transition with life expectancy increasing and fertility falling leading to a rapidly aging population and critical implications for long term care around the world This volume documents and compares long term care programs in ten wealthy countries Analyses of survey data and government statistics show that the costs of long term care are beyond the financial means of a large fraction of the elderly population in most countries particularly the oldest and most disabled As a result public systems bear most of the cost of formal long term care such as care in an institution or paid home care Most countries spend more on nursing homes than on home care but this relationship varies widely as does the mix of care needs and resources used to define eligibility for public funding At the same time most care is provided informally through family or unpaid caregivers The costs of informal care including the foregone earnings of caregivers are estimated to account for at least one third of all long term care spending in every country Thus any estimate of the social costs of long term care must account for the implicit costs of informal care

*Small Country Innovation Systems* Charles Edquist, Leif Hommen, 2009-01-01 What are the challenges that small countries face concerning innovation and what are the effects of globalization on their innovation systems In this very interesting rich and timely book Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity but also to some commonalities that exist across these countries Franco Malerba Bocconi University Italy This major book presents case studies of ten small country national systems of innovation NSIs in Europe and Asia namely Denmark Finland Hong Kong Ireland the Netherlands Norway Singapore South Korea Sweden and Taiwan These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation To facilitate comparative analysis the ten studies follow a common structure informed by an activities based approach to describing and analysing NSIs which addresses the critical issues of globalization and the consequences of innovation for economic performance The final chapter compares fast growth and slow growth countries concentrating on issues of innovation policy The results illustrate the usefulness of an activities based approach to studying NSIs point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy This valuable book presents one of the most significant comprehensive and comparative country studies of NSIs in the last decade It will have great import and should be widely read by every serious student and scholar of innovation studies

*Singapore* Kent E. Calder, 2016-11-01 How Singapore's solutions to common problems can provide examples for other societies Nearly everyone knows that Singapore has one of the most efficient governments and competitive advanced economies in the world But can this unique city state of some 5.5 million residents

also serve as a model for other advanced economies as well as for the emerging world. Respected East Asia expert Kent Calder provides clear answers to this intriguing question in his new groundbreaking book that looks at how Singapore's government has harnessed information technology, data, and a focus on innovative adaptive governance to become a model smart city, smart state. Calder describes Singapore as a laboratory for solutions to problems experienced by urban societies around the world. In particular, he shows how Singapore has dealt successfully with education, energy, environmental, housing, and transportation challenges; many of its solutions can be adapted in a wide range of other societies. Calder also explains how Singapore offers lessons for how countries can adapt their economies to the contemporary demands of global commerce. Singapore consistently ranks at the top in world surveys measuring competitiveness, ease of doing business, protection of intellectual property, and absence of corruption. The book offers concrete insights and a lucid appreciation of how Singapore's answers to near-universal problems can have a much broader relevance even in very different societies. **Demography:**

**Analysis and Synthesis, Four Volume Set** Graziella Caselli, Jacques Vallin, Guillaume Wunsch, 2006-01-03. This four-volume collection of over 140 original chapters covers virtually everything of interest to demographers, sociologists, and others. Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives, not just facts and equations to be memorized. The articles follow a theory, methods, applications approach and so offer a kind of one-stop shop that is well suited for students and professors who need non-technical summaries, such as political scientists, public affairs specialists, and others. Unlike shorter handbooks, *Demography: Analysis and Synthesis* offers a long-overdue thorough treatment of the field. Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of *Demography: Analysis and Synthesis* have explored and developed. This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural, economic, social, political, and cultural environments. Limiting themselves to human populations only, the authors and editors cover subjects that range from the core building blocks of population change—fertility, mortality, and migration—to the consequences of demographic changes in the biological and health fields, population theories and doctrines, observation systems, and the teaching of demography. The international perspectives brought to these subjects is vital for those who want an unbiased, rounded overview of these complex, multifaceted subjects. Topics to be covered: Population Dynamics and the Relationship Between Population Growth and Structure; The Determinants of Fertility; The Determinants of Mortality; The Determinants of Migration; Historical and Geographical Determinants of Population; The Effects of Population on Health; Economics, Culture, and the Environment; Population Policies; Data Collection Methods; and Teaching about Population Studies. All chapters share a common format. Each chapter features several cross-references to other chapters. Tables, charts, and other non-text features are widespread. Each chapter contains at least 30 bibliographic citations.
