**Microwave Radiometry and Remote Sensing of the Earth's Surface and Atmosphere** P. Pampaloni, S. Paloscia, 2023-06-14 This book contains a selection of refereed papers presented at the 6 Specialist Meeting on Microwave Radiometry and Remote Sensing of the Environment

held in Florence Italy on March 15 18 1999 Over the last two decades passive microwave remote sensing has made considerable progress and has achieved significant results in the study of the Earth's surface and atmosphere Many years of observations with ground based and satellite borne sensors have made an important contribution to improving our knowledge of many geophysical processes of the Earth's environment and of global changes The evolution in microwave radiometers aboard satellites has increased steadily over recent years At the same time many investigations have been carried out both to improve the algorithms for the retrieval of geophysical parameters and to develop new technologies The book is divided into four main sections three of these are devoted to the observation of the Earth's surface and atmosphere and the fourth to future missions and new technologies The first section deals with the study of sea and land surfaces and reports recent advances in remote sensing of ocean wind sea ice soil moisture and vegetation biomass including electromagnetic modelling and the assimilation of radiometric data in models of land surface processes The following two sections are devoted to the measurement of atmospheric quantities which are of fundamental importance in climatology and meteorology and since they influence radio wave propagation they also impact on several other fields including geodesy navigational satellite and radioastronomy The last section presents an overview of new technologies and plans for future missions

**Fiscal Determinants of Domestic Sovereign Bond Yields in Emerging Market and Developing Economies** Manabu Nose, Jeta Menkulasi, 2025-03-28 Domestic sovereign bonds have become a growing source of government financing in Emerging Market and Developing Economies EMDEs This paper investigates the role of fiscal policies in determining domestic bond yields and how this relationship varies depending on the debt structure Specifically the analysis highlights the interaction of fiscal policy with banking sector leverage and foreign investor holdings for government debt A 1 percentage point increase in expected primary deficits results in a persistent increase in 10 year domestic bond yield by around 36 basis points over 2.5 years with larger effects observed during the COVID 19 pandemic This contrasts with external bond spreads which are more sensitive to external and global risk factors The greater the reliance on domestic banks for deficit financing the stronger the impact of loose fiscal policy on domestic bond yields The shift in domestic debt financing towards domestic banks after the pandemic implies that sovereign yields have been increasingly interlinked with domestic banks investment behavior implying potential financial sector risks in major EMDEs

**Redox and Nitrosative Signaling in Cardiovascular System: from Physiological Response to Disease** Mariarosaria Santillo, Pasquale Pagliaro, 2019-01-22 The role of ROS RNS signaling in cardiovascular functions and diseases is increasingly emerging in the last decades The involvement of ROS RNS in the control of a large number of cardiovascular functions like the regulation of the vascular tone the control of blood pressure or myocyte excitation contraction coupling and force development has been broadly investigated and in part clarified On the other hand many efforts have been focused in clarifying the redox mechanisms involved in cardiovascular diseases like ischemia reperfusion injury diabetes associated

cardiovascular dysfunctions atherosclerosis or hypertension just to mention the major ones However in most cases the two levels of investigation remain separate and not interlaced failing in the attempt to provide a unified vision of the pathophysiologic mechanisms of cardiovascular diseases The major aim of the Research Topic has been to collect original papers and review articles dealing with the issue from basic to translation research point of views The topic includes contributions that highlight different interesting aspects of cardiovascular biology with an integrated approach useful for the development of new ideas and advancements in the field of redox signaling in the control of normal cardiovascular functions and their disruption in diseases

*What Mathematics Do Students Know and How is that Knowledge Changing?* Peter Kloosterman, Doris Mohr, Crystal Walcott, 2015-09-01 This volume is intended for researchers curriculum developers policy makers and classroom teachers who want comprehensive information on what students at grades 4 8 and 12 the grades assessed by NAEP can and cannot do in mathematics After two introductory chapters on the design of NAEP the volume contains a chapter on the challenges in analyzing NAEP data at the item level followed by five chapters that report 2005 through 2013 student performance on specific assessment items These chapters are organized by content area and then by topic e g understanding of place value knowledge of transformations ability to use metric and U S systems of measurement and thus provide baseline data on the proportion of students who are able to complete the mathematics tasks currently used in the upper elementary middle and high school mathematics curriculum Additional chapters focus on student reasoning U S performance on international assessments and using construct analysis rather than percent correct on clusters of items to understand student knowledge on specific mathematics topics Several themes emerge from the volume One is that while the rate of improvement in mathematics learning in grades 4 and 8 has slowed in recent years it has slowed more on some topics than others Another is that relatively minor changes in wording can have significant effects on student performance and thus it is difficult to be specific about what students can do without knowing exactly what questions they were asked A third theme is that changes in performance over time can sometimes but not always be understood in terms of what students are taught For example there were substantial gains on several grade 4 items requiring understanding of fractions and that is probably because the amount of instruction on fractions in grades 3 and 4 has been increasing In contrast while relatively few twelfth grade students have ever been good at factoring trinomials performance on this skill seems to be decreasing This suggests that while more students are completing advanced mathematics courses in high school these courses are not helping in the area of factoring trinomials Finally there are limitations to using NAEP as a measure of student performance on the Common Core State Standards To the extent that NAEP can be used however the

NAEP data show a substantial gap between expectations and performance
