Plurigaussian Simulations In Geosciences:

Plurigaussian Simulations in Geosciences Margaret Armstrong, Alain Galli, Hélène Beucher, Gaëlle Loc'h, Didier Renard, Brigitte Doligez, Rémi Eschard, François Geffroy, 2011-08-12 Simulation is the fastest developing branch of geostatistics and simulating facies inside reservoirs and orebodies is the most exciting part of this. Several methods have been developed to do this: sequential indicator simulations, Boolean simulations, Markov chains, and plurigaussian simulations. This book focuses on the last type of simulations. It presents the theory required to understand the method along practical examples of applications in mining and the oil industry as well as tutorial exercises. Demonstration software to illustrate how these simulations work is available on <http://pluridemo.geosciences.mines-paristech.fr>. Since the publication of the first edition, enormous numbers of papers have appeared in the literature on the subject. Plurigaussian simulations are now the preferred method for simulating facies in both mining and the oil industry. The new edition contains new case studies in both mining and petroleum together with an extensively updated theory section. Plurigaussian Simulations in Geosciences, 2003

Computational Challenges in the Geosciences Clint Dawson, Margot Gerritsen, 2013-09-17 Computational Challenges in the Geosciences addresses a cross section of grand challenge problems arising in geoscience applications including groundwater and petroleum reservoir simulation, hurricane storm surge, oceanography, volcanic eruptions, and landslides and tsunamis. Each of these applications gives rise to complex physical and mathematical models spanning multiple space-time scales which can only be studied through computer simulation. The data required by the models is often highly uncertain and the numerical solution of the models requires sophisticated algorithms which are mathematically accurate, computationally efficient, and yet must preserve basic physical properties of the models. This volume summarizes current methodologies and future research challenges in this broad and important field. **Geostatistical Simulations** M. Armstrong, P.A.

Dowd, 2013-06-29 When this two-day meeting was proposed it was certainly not conceived as a celebration, much less as a party. However, on reflection, this might have been a wholly appropriate gesture because geostatistical simulation came of age this year: it is now 21 years since it was first proposed and implemented in the form of the turning bands method. The impetus for the original development was the mining industry, principally the problems encountered in mine planning and design based on smoothed estimates which did not reflect the degree of variability and detail present in the real mined values. The sustained period of development over recent years has been driven by hydrocarbon applications. In addition to the original turning bands method, there are now at least six other established methods of geostatistical simulation. Having reached adulthood, it is entirely appropriate that geostatistical simulation should now be subjected to an intense period of reflection and assessment. That we have now entered this period was evident in many of the papers and much of the discussion at the Fontainebleau meeting. Many questions were clearly articulated for the first time and although many of them were not unambiguously answered, their presentation at the meeting and publication in this book will generate confirmatory studies.

and further research **Computer Simulation in Geology** John Warvelle Harbaugh, Graeme Bonham-Carter, 1981

Geostatistical Simulation Christian Lantuejoul, 2010-11-30 This book deals with the estimation of natural resources using the Monte Carlo methodology. It includes a set of tools to describe the morphological, statistical and stereological properties of spatial random models. Furthermore, the author presents a wide range of spatial models including random sets and functions, point processes and object populations applicable to the geosciences. The text is based on a series of courses given in the USA and Latin America to civil mining and petroleum engineers as well as graduate students in statistics. It is the first book to discuss the geostatistical simulation techniques in such a specific way. **Physically-Based Modelling and**

Simulation of Climate and Climatic Change M.E. Schlesinger, 2011-10-01 The Geo Sciences Panel is a synonym for the Special Programme on Global Transport Mechanisms in the Geo Sciences. This Programme is one of the special programs established by the NATO Science Committee to promote the study of a specific topic using the usual NATO structures namely Advanced Research Workshops, Advanced Study Institutes, Conferences, Collaborative Research Grants, Research Studies and Lecture Visits. The aim of the Programme is to stimulate and facilitate international collaboration among scientists of the member countries in selected areas of global transport mechanisms in the Earth's atmosphere, hydrosphere, lithosphere and asthenosphere and the interactions between these global transport processes. Created in 1982, the Geo Sciences Panel followed the Air-Sea Interactions Panel which was very successful in reviewing mechanisms at the air-sea-ice interface. Initially, the Geo Sciences Panel recognized the importance of magma chambers, ore deposits, geochemical cycles, seismic activity and hydrological studies. However, the Panel was rapidly convinced that the climate system is one of the most important systems in which to promote research on global transport mechanisms. Consequently, the Panel welcomed the organization of a course on Physically Based Modelling and Simulation of Climate and Climatic Change. This course was launched in Belgium in 1984 during both the Liege colloquium on Coupled Ocean-Atmosphere Models and the Louvain-la-Neuve General Assembly of the European Geophysical Society. Rapidly, scientists recognized that this course was timely and would be well received by the climate community, especially by junior researchers in this multi and inter-disciplinary field.
