Pneumatic Structures A Handbook Of Inflatable Architecture:

Pneumatic Structures Thomas Herzog, Gernot Minke, H. Eggers, 1976 This is a handbook for architects and structural engineers providing the theory behind pneumatics and describing the advantages of being able to construct buildings that cover vast areas inexpensively Major pneumatic structures throughout the world are examined as well historical developments Technical data is included membrane characteristics methods of cutting and joining stabilisation measures problems of transport and erection The book contains diagrams which simplify calculations for cylindrical and spherical membranes

Pneumatic structures; a handbook of inflatable architecture; with contributions by Gernot Minke and Hans Eggers T. Herzog, 1976 **Construction Manual for Polymers + Membranes** Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes Innovative technical developments are constantly improving its material properties at the same time there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of their lingering reputation as environmental offenders From the history of plastics and membranes in architecture to their material properties and requirements in construction and design the *Plastics and Membranes Construction Manual* cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the *Im DETAIL* series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library

Bio-Architecture Javier Senosiain, 2013-05-13 *Bio Architecture* studies the natural principles of animal and human constructions from several different perspectives and presents a great part of the knowledge that gives origin and shape to built form Organic architecture offers a design approach arising from natural principles bringing us back to local history tradition and cultural roots to give us built forms which are in harmony with nature It also shows how architects can take advantage of the resources that contemporary technology has placed within our grasp *Bio Architecture* is a unique book that studies the natural principles of animal and human constructions from several different perspectives and looks at what gives origin and shape to built form The text gives an informative inspiring overview of the drive toward organically informed design both intrinsically and aesthetically using a wide variety of international examples Javier Senosiain is an architect and

an historian He has pursued his interest in Organic Architecture across the globe drawing parallels between Buckminster Fuller s Geodesic dome and the spider s web between Santiago Calatrava s Cathedral of St John in NY and the roots of a tree Where nature has inspired form Senosiain has made a career of analyzing and applying the principles he sees in some very creative writing and architecture

Bio-architecture Javier Senosiain Aguilar,2003 Studying the natural principles of animal and human constructions to present the knowledge that gives origin and shape to built form this title examines the drive towards organically informed design both intrinsically and aesthetically using a wide variety of international examples

ETFE Annette LeCuyer,2008-06-06 ETFE foil has recently become an important material for the cladding of technologically sophisticated and innovative buildings This material is very thin and lightweight and when used in air filled cushion assemblies has enormous strength and a range of adaptive environmental attributes ETFE cushion enclosures became known primarily through Grimshaw Architects Eden Project and Herzog de Meuron s Allianz Arena and they are being used on the spectacular swimming stadium for the 2008 Olympic Games in Beijing the largest ETFE building envelope in the world so far This book is conceived as an in depth introduction to the characteristics of ETFE and its applications in construction Project examples explore in detail the specific characteristics of ETFE building skins in the areas of structural behavior light transmission insulation acoustics fire engineering and environmental modification

Pedagogical Experiments in Architecture for a Changing Climate Tülay Atak,Luis Callejas,Jonathan Scelsa,Jørgen Johan Tandberg,2024-01-22 This book presents a series of pedagogical experiments translating climate science environmental humanities material research ecological practices into the architectural curriculum Balancing the science and humanities it exposes recent pedagogical experiments from renown educators while also interrogating a designer s agency between science and speculation in the face of climate uncertainty The teaching experiments are presented across four sections Abstraction Organization Building and

Narrative exposing core parts of an architect's education and how educators can simultaneously provide fundamental skills and constructive literacy while instigating environmental sensibilities. Chapters cover issues such as an unstable hydrosphere, water infrastructure, remediating materials, methods of disassembly and adaptive reuse, as well as constructing new aesthetic categories of climate change and implementing oral histories of construction among many others. Written and edited by expert design educators actively engaged in experimenting in new forms of pedagogy, this book will be of great use to architecture instructors at all levels looking to renew their teaching practices to more directly address the climate emergency. It will also appeal to those academics across the built environment interested in the ways design can affect and adapt to climate change.

The Moving Eye Edward Dimendberg, 2019-05-09. Once the province of film and media scholars, today the moving image is of broad concern to historians of art and architecture and designers of everything from websites to cities. As museums and galleries devote increasing space to video installations which no longer presuppose a fixed viewer, urban space becomes envisioned and planned through fly-throughs and technologies such as GPS add data to the experience of travel. Moving images have captured the attention of geographers and scholars across the humanities and social sciences. Their practice of mobility studies is remaking how we understand a contemporary world in relentless motion. Media theorist and historian Anne Friedberg, 1952-2009, was among the first practitioners of visual studies to theorize the experience of vision in motion. Her books have become key points of reference in the discussion of the windows that frame images and the viewers in motion who perceive them. Although widely influential beyond her own discipline, Friedberg's work has never been the subject of an extended study. *The Moving Eye: Film, Television, Architecture, Visual Art and the Modern* gathers together essays by renowned thinkers in media studies, art history, architecture and museum studies to consider the rich implications of her work for understanding film and video, new media, visual art, architecture, exhibition design, urban space and virtual reality. Ranging from early cinema to works by Le Corbusier, Sergei Eisenstein, Gordon Matta Clark and Pierre Huyghe, to theories of the image in motion informed by psychoanalysis, theories of the public sphere and animal studies, each of the nine essays in the book advances the lines of inquiry commenced by Friedberg.
