Organizations and Strategies in Astronomy Andre Heck,2012-12-06 I am most grateful to Andre Heck for his invitation to write a foreword to OSA Volume 4 I will use this valued opportunity to emphasise those topics in Vol 4 which I consider important even if other topics may be of even greater importance in the universal scale of things At the outset let me say that I commend Vol 4 to its readers it contains much of very great interest for organisations and strategies in astronomy A topic which I consider to be of very great importance at this time is Adverse Environmental Impact on Astronomy There are two papers on this topic in OSA 4 Cohen on Strategies for Protecting Radio Astronomy and Schwarz on

Light Pollution Control The growth in the extent of use the power and spectral demand for radio transmission continues to increase virtually exponentially The impact on the listening services such as radio astronomy has been severe Only by creativity in developing new techniques for radio noise including legal transmissions reduction and by participating fully in the allocation process for radio frequencies has radio astronomy developed to the powerful investigative tool it is today

Patrick Moore's Pocket Guide to the Stars and Planets Patrick Moore,1980 *Organizations and Strategies in Astronomy* 7 Andre HECK,2007-09-18 Astronomy is the most ancient science humans have practiced on Earth It is a science of extremes and of large numbers extremes of time from the big bang to infinity of distances of temperatures of density and masses of magnetic fields etc It is a science which is highly visible not only because stars and planets are accessible in the sky to the multitude but also because the telescopes themselves are easily distinguishable usually on top of scenic mountains and also because their cost usually represent a substantial proportion of the national budget and of the taxpayers' contributions to that budget As such astronomy cannot pass unnoticed It touches on the origins of matter of the Universe where we live on life and on our destiny It touches on philosophy as well as on religion Astronomy is the direct contact of humankind with its origins and the immensity of universal nature It is indeed a science of observation where experimentation is practically possible and which is ruled by mathematics physics chemistry statistical analysis and modelling while offering the largest number of verifications of the most advanced theories of fundamental physics such as general relativity and gravitation At the beginning of the 21 century astronomy is clearly a multidisciplinary activity touching on all aspects of science It is therefore logical that in the past and still now astronomy has attracted the most famous scientists be they pure observers mathematicians physicists biologists experimentalists and even politicians *Cambridge Guide to Stars and Planets* P.
