Thyroid Cancer H.-J. Biersack,F. Grünwald,2013-03-14 Thyroid cancer was first described at the end of the eighteenth century For one and a half centuries surgery remained the only effective therapeutic option for this cancer until in 1946 radioiodine therapy was performed for the first time Radioiodine therapy was brought to Germany 4 years later in 1950 In the intervening 50 years the use of iodine 131 has proved able to cure the cancer and its metastases Per cutaneous radiation therapy had been added to the therapeutic armamentarium but even now there is heated debate as to its potential Suppressive 1 thyroxine supplement is a prerequisite for successful treatment while cytotoxic drugs are mainly used for palliation During the past 10 years various new diagnostic and therapeutic approaches have been introduced High dose radioiodine therapy as well as redifferentiation therapy with retinoic acid seem beneficial Diagnostic procedures such as magnetic resonance imaging MRI positron emission tomography PET as well as isonitriles MIBI 201 and thallium Tl have proved useful for the follow up of thyroid cancer Two special issues are also discussed in this book Iodine supplementation in areas of iodine deficiency has led to a change in pathology insofar as papillary thyroid cancer with a better prognosis has become more frequent than follicular carcinoma A special chapter is dedicated to thyroid cancer in Chernobyl children
