

В современных условиях возрастает зависимость надежности и безопасности космических систем непосредственно от используемых в ней программных средств космического назначения (ПСКН). Неополнота, неопределенности и разная трактовка в определении и формализации характеристик качества ПСКН и требуемых их значений оставляют широкое поле для произвола при описании и оценивании их качества. Эти факторы обосновывают необходимость разработки и применения для каждого проекта ПСКН специальных программ, формализованных методов описания и оценки качества. В настоящей работе обоснованы особенности, общие требования и принципы обеспечения качества ПСКН. С учетом назначения, особенностей, условий эксплуатации, степени важности отдельных требований и др. обоснована и построена модель качества ПСКН. Для оценки качества ПСКН на основе построенной базовой модели качества сформирована система измеримых (оценочных) показателей. Книга предназначена для специалистов в области программного обеспечения космических систем, также учащихся соответствующим специальностям высших учебных заведений.
