Sense Of Learning:

The Sense of Learning Ann E. Berthoff, 1990 In this book Ann Berthoff has posed three questions that frame the book's structure and whose answers frame her counterstatement Is teaching still possible Is learning still possible Is reading still possible *Making Sense of Learning* Norman Reid, Asma Amanat Ali, 2020-08-26 This textbook brings together findings from global research on teaching and learning with an emphasis on secondary and higher education The book is unique in that the content is selected in an original way and its presentation reflects the most recent research evidence related to understanding The book covers and presents themes that are based tightly on worldwide research evidence scrupulously avoiding opinion or any dependence on the personal experience of the authors The book starts by reflecting on educational research itself The four chapters that follow relate the story of the research that shows how all humans learn and the variations within that framework These chapters offer a tight framework that underpins much of the rest of the text The next four chapters look at the way school curricula are organised and how the performance of learners can be assessed They summarise the research evidence related to thinking skills and consider the importance of practical teaching This is followed by two chapters that draw from the extensive social psychology research on attitude development as it applies in education and then by two chapters that summarise the research related to major issues of controversy the performativity agenda and the issue of quality One chapter looks at the place of statistics in education The next two chapters look at the evidence that can support or undermine many typical education beliefs or myths and mirages Finally the last chapter brings it all together and looks into the future pointing to some areas where future research is likely to be helpful based on current knowledge

Perspectives on Learning, 5th Edition Denis Phillips, Jonas F. Soltis, 2015-04-18 Rather than simply outlining the classical and modern theories of learning this widely adopted text brings the material to life through case studies that engage students in debates about what really happens in classrooms Students are encouraged to test the strengths and weaknesses of each theory so that ultimately they will learn to formulate their own philosophies of teaching and learning The new Fifth Edition of Perspectives on Learning features A discussion of common sense and learning theories A new chapter on Transfer of Learning Consideration of recent developments in brain science A thoroughly updated list of Recommendations for Further Reading Perspectives on Learning is one of the five books in the highly regarded Teachers College Press Thinking About Education Series now in its Fifth Edition All of the books in this series are designed to help pre and in service teachers bridge the gap between theory and practice D C Phillips is Professor of Education and Philosophy Emeritus School of Education at Stanford University Jonas F Soltis is William Heard Kilpatrick Professor Emeritus of Philosophy and Education at Teachers College Columbia University A great little book packed with conceptual contrasts and rich classroom vignettes The best resource I've found for teaching about theories of learning in a liberal arts college Jack Dougherty Trinity College Hartford CT A well written and readable book Phillips and Soltis should be commended for bringing together these various perspectives on learning that can be used by both pre service and in service teachers The case studies presented help illustrate the theories and should facilitate active class discussions The Professional Educator

The Senses of Scripture Yael Avrahami, 2012-06-15 The Senses of Scripture reveals the essence of biblical epistemology the ways in which ancient Israelites thought about and used their sensorium The theoretical introduction demonstrates that scholars need to liberate themselves from the Western bias that holds a pentasensory paradigm and prioritises the sense of sight The discussion of the biblical material demonstrates that biblical scholars should follow a similar path Through examination of associative and contextual patterns the author reaches a septasensory model including sight hearing speech kinaesthesia touch taste and smell It is further demonstrated that the senses according to the HB are a divinely created physical experience which symbolised human ability to act in a sovereign manner in the world Despite the lack of a biblical Hebrew term sense it seems that at times the merism sight and hearing serves that matter Finally the book discusses the longstanding dispute regarding the primacy of sight vs hearing and claims that although there is no strict sensory hierarchy evident in the text sight holds a central space in biblical epistemology
