Low-Power Wireless Sensor Networks Jukka Suhonen, Mikko Kohvakka, Ville Kaseva, Timo D. Hämäläinen, Marko Hännikäinen, 2012-01-14 Wireless sensor network WSN is an ad hoc network technology comprising even thousands of autonomic and self organizing nodes that combine environmental sensing data processing and wireless networking The applications for sensor networks range from home and industrial environments to military uses Unlike the traditional computer networks a WSN is application oriented and

deployed for a specific task WSNs are data centric which means that messages are not sent to individual nodes but to geographical locations or regions based on the data content A WSN node is typically battery powered and characterized by extremely small size and low cost As a result the processing power memory and energy resources of an individual sensor node are limited However the feasibility of a WSN lies on the collaboration between the nodes A reference WSN node comprises a Micro Controller Unit MCU having few Million Instructions Per Second MIPS processing speed tens of kilobytes program memory few kilobytes data memory In addition the node contains a short range radio and a set of sensors Supply power is typically obtained with small batteries Assuming a target lifetime of one year using AA size batteries the available power budget is around 1 mW This book covers the low power WSNs services ranging from hardware platforms and communication protocols to network deployment and sensor data collection and actuation The implications of resource constraints and expected performance in terms of throughput reliability and latency are explained As a case study this book presents experiments with low energy TUTWSN technology to illustrate the possibilities and limitations of WSN applications

Industrial Wireless Sensor Networks Seong-eun Yoo, Taehong Kim, 2020-12-07 Wireless sensor networks are penetrating our daily lives and they are starting to be deployed even in an industrial environment The research on such industrial wireless sensor networks IWSNs considers more stringent requirements of robustness reliability and timeliness in each network layer This Special Issue presents the recent research result on industrial wireless sensor networks Each paper in this Special Issue has unique contributions in the advancements of industrial wireless sensor network research and we expect each paper to promote the relevant research and the deployment of IWSNs

Wireless sensor networks protocols in IoT. A performance evaluation and comparison Polycarp Yakoi, 2021-02-02 Master s Thesis from the year 2018 in the subject Engineering Computer Engineering grade 3 71 Cyprus International University language English abstract In this thesis three Wireless Sensor Networks Ad hoc On Demand Distance Vector Dynamic Source routing protocol and Optimized Link State routing protocol have been simulated and compared in typical IoT scenarios Their performance was evaluated using three performance metrics and then they were compared the performance metrics are Routing Overhead Average End to End Delay and Throughput Different number of nodes with different percentages of mobile nodes were analyzed Specifically number of nodes analyzed were 20 40 60 and 70 with the number of mobile nodes 10 15 and 20 using OPNET while with NS 3 20 60 and 100 nodes were analyzed For each of the number of nodes all the number of mobile nodes were evaluated The routing protocols were analyzed using the OPNET Simulation Software and NS 3 and the environment

size for the simulation was 1000m by 1000m IoT has continue to grow bigger since from its inception Many mobile devices are now available the internet and its application have only grown bigger and better As IoT is continually growing so also is the complexity as a result issues pertaining routing have also increased Many researches have been made in attempt to proffer solutions that will either minimize or eliminate these routing issues Different routing protocols have been designed with different specifications for different applications of the IoT Also attempts have been made to implement routing protocols of other types of networks in the IoT
